24545 (LA—9582-C) **Proceedings of the workshop on muon science and facilities at Los Alamos.** Heffner, R.H. (comp.). (Rice Univ., Houston, TX (USA); Los Alamos National Lab., NM (USA)). Nov 1982. Contract W-7405-ENG-36. 126p. (CONF-8203119—). NTIS, PC A07/MF A01. Order Number DE83004473.
From Workshop on muon science and facilities at Los Alamos; Los Alamos, NM, USA (15 Mar 1982).
Portions are illegible in microfiche products. Original copy available until stock is exhausted.
This report contains the proceedings of a workshop held at Los Alamos March 15-18, 1982 to consider present and future experiments with muons in particle, nuclear and solid-state physics, and in chemistry. The impact of possible new muon channels was given special attention. The participants concluded that new facilities, particularly with low-momentum and pulse capabilities, would have major benefits in all areas considered.

24546 (UCID—19741) **Calculated photon spectra at several angles for 5- and 50-MeV electron beams striking solid and gas targets.** Slaughter, D.R. (Lawrence Livermore National Lab., CA (USA)). 24 Feb 1983. Contract W-7405-ENG-48. 28p. NTIS, PC A03/MF A01. Order Number DE83009174.
Coupled electron-photon transport calculations have been carried out to simulate the photon generation when a 5- or 50-MeV electron beam strikes a solid or gas target. Results indicate that a 5-MeV beam striking targets of tungsten wire, air, or air doped with Kr or Xe generates a photon spectrum sharply peaked in the forward direction and with approximately 1/E spectral intensity. At right angles to the beam the photon intensity is predominantly due to characteristic K x-rays. A 50-MeV beam striking the same targets generates substantially higher photon yield in the forward direction, but the yield normal to the beam is similar to that due to the 5-MeV beam. However, positron-electron annihilation radiation constitutes a significant part of the photon radiation normal to the beam, and is more intense than characteristic K x-rays when the target is more than about one-third of the electron range.

24547 **Optoacoustic measurements of IR multiphoton excitation of cis-3, 4-dichlorocyclobutene.** Presser, N.; Barker, J.R.; Gordon, R.J. (Department of Chemistry, University of Illinois at Chicago, Chicago, Illinois 60680). *Journal of Chemical Physics;* **78**: No. 5, 2163-2169(1 Mar 1983).
Optoacoustic detection was used to study the infrared multiphoton excitation of cis-3,4-dichlorocyclobutene (DCCB). The dependence of the optoacoustic signal S/sub OA/ on DCCB pressure P/sub DCCB/, on Ar buffer gas pressure P/sub Ar/, and on laser fluence phi were studied systematically. It was observed that S/sub OA/ is proportional to P/sub DCCB/ and increases monotonically with P/sub Ar/, leveling off at P/sub Ar/~10 Torr. Absolute calibration of S/sub OA/ was achieved by measuring the attenuation of the laser beam. It was found that the average number of photons absorbed by DCCB n-bar varies as 5.4 phi/sup 0.85/, where phi is expressed in J/cm^2. It is shown that the buffer gas pressure dependence of S/sub OA/ can be used to deduce the vibrational relaxation rate of the excited molecule. The fluence dependence of n-bar is predicted quantitatively by numerical solution of the master equation, including collision terms. It is assumed in this calculation that the infrared absorption cross section is independent of vibrational energy and is equal to the nominal small signal cross section.

24548 **A $^4u^-$—X ^{3}Pi transition in CF: A measurement of the term energy and bond length of a fluoromethylidyne metastable.** Grieman, F.J.; Droege, A.T.; Engelking, P.C. (Department of Chemistry, Chemical Physics Institute, University of Oregon, Eugene, Oregon 97403). *Journal of Chemical Physics;* **78**: No. 5, 2248-2253(1 Mar 1983).
We report the first observation of the (0,0) and (0,1) vibrational bands of the weak, spin forbidden a $^4\Sigma^-$—X ^{3}Pi transition of the CF radical. The spectra, obtained in a flowing afterglow, yield values for T_e, B_e, and r_0 of the a $^4\Sigma^-$ state of 28 564 +- 1 cm^{-1}, 1.3035 +- 0.002 cm^{-1}, and 1.326 +- 0.001 A, respectively. The intensity distribution in the rotational subbands is consistent with the mixing of the a $^4\Sigma^-$ state predominantly with the X ^{3}Pi state and

the uncharacterized C $^2\Sigma^+$. This result is discussed with regard to previous calculations.

24549 **Multichannel distorted wave Born approximation for reactive scattering.** Hubbard, L.M.; Shi, S.; Miller, W.H. (Department of Chemistry and Materials and Molecular Research Division of Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **78**: No. 5, 2381-2387(1 Mar 1983).

Previous applications of the distorted wave Born approximation (DWBA) to reactive scattering have often given reasonably good relative cross sections, i.e., angular distributions, product state distributions, etc.: but absolute reactive cross sections have been poor. It is argued in this paper, however, that the DWBA for reactive scattering should be accurate if (1) the reaction probability is sufficiently small (as it is, e.g., in the threshold region of a reaction) and (2) the nonreactive scattering is described sufficiently accurately. To describe the nonreactive scattering "sufficiently accurately" this paper utilizes a nonreactive coupled-channel scattering wave function for distorted waves in the DWBA. Application to a standard test problem (collinear $H+H_2$) shows this multichannel DWBA indeed to be extremely accurate if the reaction probability is no larger than 0.1 and if ~3 to 4 vibrational states are included in the nonreactive coupled-channel expansion. This approach thus provides an excellent description of the threshold region of a reaction which has an activation barrier.

24550 **Third body efficiencies for collision-induced dissociation of diatomics. Rate coefficients for $H+H_2 \rightarrow 3H$.** Blais, N.C.; Truhlar, D.G. (Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **78**: No. 5, 2388-2393(1 Mar 1983).

Fixed-energy cross sections, thermal-translation rate constants, energies of activation, opacity functions, and probabilities of reaction as functions of initial relative orientation angle are presented for the reaction $H+H_2(v, j) \rightarrow 3H$ on the lowest-energy potential surface for selected initial vibrational-rotational states (v, j) of H_2. In agreement with the experimental result for steady dissociation of a thermal mixture of initial states, the collision-induced dissociation process for these state-selected processes is found to be considerably enhanced for H as collision partner as compared to Ar as collision partner. We find that the cross sections for collision-induced dissociation are strongly increasing functions of initial internal energy and initial vibrational quantum number. The general trend at 4500 K is that the rate constants increase more rapidly than the equilibrium populations decreases as we increase v. The activation energies for complete dissociation are larger than the fixed-state binding energies by 0.2—1.1 eV.

24551 **Electronic excited state transport among molecules distributed randomly in a finite volume.** Ediger, M.D.; Fayer, M.D. (Department of Chemistry, Stanford University, Stanford, California 94305). *Journal of Chemical Physics;* **78**: No. 5, 2518-2524(1 Mar 1983).

A theoretical study of electronic excited state transport among molecules randomly distributed in a finite volume is carried out. Two special cases of the general transport and trapping problem are treated. A truncated series expansion in powers in the chromophore density is used as an approximation for one component systems (i.e., donor—donor transport only). In two component systems of donors and traps, the Foerster limit, in which transfer can occur only from donors to traps due to low donor concentrations, is solved exactly for a finite spherical volume. In both cases, the results presented demonstrate that time-dependent observables can be significantly altered in finite volume systems relative to infinite volume systems. These calculations have implications for the interpretation of experiments performed on real finite volume systems, e.g., energy transport among the chromophores of an isolated polymer chain.

24552 **Local mode predictions for excited stretching vibrational states of HCCD and H ^{12}C ^{13}CH.** Halonen, L.; Noid, D.W.; Child, M. (Theoretical Chemistry Department, University of Oxford, 1 South Parks Road, Oxford OX1 3TG, United Kingdom). *Journal of Chemical Physics;* **78**: No. 5, 2803-2804(1 Mar 1983).

Calculation are performed for the stretching vibrational states of acetylene HCCD and $H^{12}C^{13}H$ on the Oak Ridge computing systems. The results of these calculations agree with the recent observations by photo-acoustic spectroscopy. (AIP)

24553 **Radiative charge transfer in collisions of He^{2+} ions and ground-state H atoms.** West, B.W.; Lane, N.F.; Cohen, J.S. (Physics Department, Rice University, Houston, Texas 77251). *Physical Review* [*Section*] *A: General Physics;* **26**: No. 6, 3164-3169(Dec 1982).

Total cross sections for radiative charge transfer in collisions of $^4He^{2+}$ ions with ground-state H atoms leading to He^+ 1s and H^+ ions have been calculated for a range of center-of-mass energies from 0.1 to 1000 eV. An adiabatic optical-potential formalism is used where the imaginary part of the potential-energy function is proportional to the Einstein A coefficient for the molecular transition. Both quantum-mechanical and semiclassical JWKB calculations are performed. Predissociation resonances add structure to the cross section. The radiative contribution is shown to dominate the charge-transfer process for this system at low collision energies.

24554 **Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence.** Younger, S.M. (Atomic and Plasma Radiation Division, Center for Radiation Research, National Bureau of Standards, Washington, DC 20234). *Physical Review* [*Section*] *A: General Physics;* **26**: No. 6, 3177-3186(Dec 1982).

Electron-impact ionization cross sections have been calculated in a distorted-wave exchange approximation for seven ions in the argon isoelectronic sequence. For neutral argon, target configuration interaction and term dependence in the ejected-electron continuum were found to be significant influences on the cross section. Similarities of electron ionization and photoionization are discussed. An analytic fit is given which accurately reproduces the distorted-wave cross sections and rate coefficients of argonlike ions with $Z >$ or $= 20$.

24555 **Photoelectron branching ratios and angular distributions for the valence levels of SF_6 in the range $16 <$ or $= h\nu <$ or $= 30$ eV.** Dehmer, J.L.; Parr, A.C.; Wallace, S.; Dill, D. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *A: General Physics;* **26**: No. 6, 3283-3292(Dec 1982). Contract W-31-109-ENG-38.

Photoelectron branching ratios and angular distributions have been measured for the six outermost levels of SF_6 in the range $16 <$ or $= h\nu <$ or $= 30$ eV with the use of synchrotron radiation. These results are discussed in the framework of the large variety of experimental and theoretical studies of SF_6 with dual objective of resolving the long-standing problem of the ordering of the valence shells and of gaining some insight into the role of shape-resonant behavior in the low-energy photoionization continua of SF_6. These objectives are met with partial success in that we tentatively conclude the valence configuration 5a²/sub 1g/4t⁶/sub 1u/1t⁶/sub 2g/3e⁴/sub g/ (1t⁶/sub 2u/+5t⁶/sub 1u/)1t⁶/sub 1g/ ^{1}A/sub 1g/ is most consistent with the available body of evidence and that it is plausible to invoke channel interaction near the strong resonant feature at $h\nu \sim$ 23—24 eV to help account for some of the apparently contradictory evidence. Further experimental and theoretical work is suggested to clarify these issues.

24556 **Semiclassical trajectory effects on C^{0+}-H charge-exchange cross sections at low energy.** Green, T.A.; Riley, M.E.; Shipsey, E.J.; Browne, J.C. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review* [*Section*] *A: General Physics;* **26**: No. 6, 3668-3671(Dec 1982).

Close-coupling charge-exchange calculations for C^{0+}-H collisions have been carreid out for impact velocities spanning 2.5 x 10^4 to 5 x 10^5 m/s (~3-to-1300—eV H energy). Six appropriate molecular states were included, among which all radial and angular couplings were evaluated using the proton as an electronic origin following the approach of Piacentini and Salin. Four levels of semiclassical approximations for the nuclear motion were investigated and compared: (1) the usual straight-line impact-parameter approximation, (2) the use of a Coulomb trajectory on an effective 6/R potential, (3) the average approximation, which is a form of multitra-

jectory theory, and (4) a uniform semiclassical reference-function method of essentially full quantum accuracy. The results are presented and the validity of these various approximations for the nuclear motion is discussed, for the range of collision energies reported.

24557 **Target-thickness dependence of K-shell vacancy fractions in foil-excited ion beams.** Schneider, D.; Kanter, E.P.; Zabransky, B.J. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] A: General Physics;* **26**: No. 6, 3700-3701(Dec 1982). Contract W-31-109-ENG-38.

K-shell vacancy fractions have been measured for 2.7- and 0.4-MeV nitrogen ions exiting thin carbon foils as a function of foil thickness. The vacancy fractions per projectile ion were deduced from measuring the yields of K Auger electrons emitted by the foil-excited nitrogen ions. It is found that the vacancy fractions for these ions reach equilibrium only for foils thicker than ~ 20 $\mu g/cm^2$. The variation of vacancy fractions in foils with thicknesses below 20 $\mu g/cm^2$ is a strong function of the projectile energy.

24558 **Collision-free coherent anti-stokes Raman spectroscopy (CARS) of molecular photofragments.** Valentini, J.J.; Moore, D.S.; Bomse, D.S. (Los Alamos National Lab., NM). *Chemical Physics Letters;* **83**: No. 2, 217-221(15 Oct 1981).

Collision-free CARS spectra of molecular oxygen produced in the visible photodissociation of ozone have been obtained. The nascent rotational and vibrational state distributions of the oxygen have been extracted from these spectra.

24559 **Resonance ionization spectroscopy schemes for Ar, Kr and Xe.** Payne, M.G. (Oak Ridge National Lab., TN); Chen, C.H.; Hurst, G.S.; Kramer, S.D.; Garrett, W.R.; Pindzola, M. *Chemical Physics Letters;* **79**: No. 1, 142-148(1 Apr 1981). Contract W-7405-ENG-26.

Laser schemes are suggested for the efficient ionization of Ar, Kr and Xe and the related two-photon transition rates are given. Ionization yields are calculated for each gas with reasonable laser parameters.

24560 **Oscillator strength sums and effective electron number in optical spectroscopy of solids.** Smith, D.Y. (Argonne National Lab., IL); Shiles, E. pp 323-331 of Recent developments in condensed matter physics, Vol. 3. Devreese, J.T.; Lemmens, L.F.; Van Doren, V.E.; Van Royen, J. (eds.). New York, NY; Plenum Publishing Corporation (1981).

Recently developed composite optical data for metallic aluminum are employed to illustrate various definitions of n/sub eff/, the number of electrons effective in an absorptive process. Two effects are demonstrated: the screening of valence-electron processes by the polarizable ion cores and the redistribution of oscillator strength between valence and core electrons.

24561 **Intramolecular dynamics in the quasiperiodic and stochastic regimes.** Noid, D.W.; Koszykowski, M.L.; Marcus, R.A. (Oak Ridge National Lab., TN). pp 133-166 of Quantum mechanics in mathematics, chemistry, and physics. Gustafson, K.E.; Reinhardt, W.P. (ed.). New York, NY; Plenum Publishing Corporation (1981). Contract W-7405-ENG-26.

Nonlinear dynamics has been the subject of intense study in recent years. In this review article, a summary is presented of the authors' recent work in this field, in which nonlinear dynamics is applied to problems involving molecular behavior. Four aspects are described: (1) semiclassical methods for the calculation of bound-state eigenvalues; (2) classical spectra and correlation functions in the quasiperiodic and chaotic regimes; (3) chaotic behavior in quantum mechanics; and (4) applications to collisional and laser interactions. 44 references, 25 figures.

24562 **Photodissociation of nitromethane at 266 nm.** Kwok, H.S.; He, G.Z.; Sparks, R.K.; Lee, Y.T. (Lawrence Berkeley Lab., CA). *International Journal of Chemical Kinetics;* **13**: 1125-1131(1981). Contract W-7405-ENG-48.

In a crossed laser-molecular beam study of nitromethane, it was found that the excitation of nitromethane at 266 nm did not yield dissociation products under collision-free conditions. When a small cluster of nitromethane was excited at the same frequency, the product was seen only at energies and masses consistent with the rupture of the van der Waals bond by vibrational predissociation of the excited state. 3 figures.

24563 **Symmetry simplifications of space types in configuration interaction induced by orbital degeneracy.** Balasubramanian, K. (Lawrence Berkeley Lab., CA). *International Journal of Quantum Chemistry;* **20**: 1255-1271(1981). Contract W-7405-ENG-48.

Symmetry simplifications are introduced in configuration interaction (CI) by reducing the number of symmetry-allowed space types if there is degeneracy in some of the molecular orbitals by constructing the unique space types. A new symmetry group which is called the configuration symmetry group is defined and is shown to be expressible as a generalized wreath product group. Generating functions are derived for enumerating the equivalence classes of space types. A double coset method is expounded which constructs the representatives of all equivalence classes of space types using the cycle index of generalized wreath product and the double cosets of label subgroup with generalized wreath product in the symmetric group S/sub n/ if n is twice the number of occupied and virtual orbitals.

24564 **New look at correlations in atomic and molecular systems. I. Application of fermion Monte Carlo variational method.** Moskowitz, J.W.; Kalos, M.H. (New York Univ., NY). *International Journal of Quantum Chemistry;* **20**: 1107-1119(1981). Contract AC02-76ER03077.

Research is under way directed toward the development of compact and accurate correlation functions for many-electron systems. The computational tool is the variational method in which the many-electron integrals are calculated by Monte Carlo using the fermion Metropolis sampling algorithm. That is, a many-fermion system is simulated by sampling the square of a correlated antisymmetric wave function. The principal advantage of the method is that interelectronic distance r/sub ij/ may be included directly in the wave function without adding significant computational complexity. In addition, other quantities of physical and theoretical interest such as electron correlation functions and representations of Coulomb and Fermi holes are very easily obtained. Preliminary results are reported for He, H_2, and Li_2. 26 references, 3 figures.

24565 **Laser-induced fluorescence of trapped molecular ions: the $CH^+ A^1\pi$ - $X^1\Sigma^+$ system.** Grieman, F.J.; Mahan, B.H.; O'Keefe, A.; Winn, J.S. *Faraday Discussions of the Chemical Society;* No. 71, 191-203(1981). Contract W-7405-ENG-48.

The CH^+ and CD^+ A^1 Pi - $X^1\Sigma^+$ absorption spectra have been obtained by laser excitation of these fragment ions. The ions are contained in a mass-selective quadrupole ion trap under collision-free conditions. The spectra therfore reflect the nascent internal-energy distributions of the ions, which were produced by electron impact on $CH_4(CD_4)$ or $C_2H_2(C_2D_2)$. Both parent gases gave virtually identical spectra; large rotational and vibrational excitation was observed. The equipment was also capable of measuring the radiative lifetime of CH^+ (CD^+) A^3 Pi ($v = 0$), and the measured value, 815 ns, is found to be in good agreement with theoretical calculations of this quantity. 29 references, 6 figures.

24566 **Applications of classical trajectory techniques to reactive scattering.** Muckerman, J.T. (Brookhaven National Lab., Upton, NY). *Theoretical Chemistry: Advances and Perspectives;* **6A**: vp(1981).

This article provides a better understanding of the kinds of systems and chemistry for which the classical trajectory technique is useful. The focus is on how well classical trajectory calculations can account for most detailed aspects of gas-phase, single-collision chemical reactions. The scope of this work is limited to those few systems for which there is sufficient experimental and calculated

data to permit such a comparison, and for which a reasonably appropriate potential energy surface is available. (SC)

24567 **(ANL/NESC—775) HEMP; hydrodynamic elastic-magneto plastic flow.** Wilkins, M.L.; Levatin, J.A. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048775.

The maximum number of J's in any K-line is 101. A problem of up to about 10,000 zones may be run.

The HEMP code solves the conservation equations of two-dimensional elastic-plastic flow, in plane x-y coordinates or in cylindrical symmetry around the x-axis. Provisions for calculation of fixed boundaries, free surfaces, pistons, and boundary slide planes have been included, along with other special conditions.CDC7600; FORTRAN IV, LLL CHAT compiler; SCOPE 2.1; The HEMP main code fills the small core memory (SCM) with the code, working storage, library, and system routines. The large core memory (LCM) utilized is a function of problem size, the amount required is 527,270 (octal) words.

24568 **(ANL/NESC—792) EVITS; steady state two-dimensional fluid flow.** Domanus, H.M. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048792.

Maxima of 50 connected line segments to define solution domain, 40 x 40 grid for calculation.

EVITS was developed for estimating steady-state, incompressible, isothermal flow fields in complex two-dimensional geometries. A velocity-stream function formulation is used along with a model to resolve viscous effects at solid boundaries. A number of geometry and ten boundary type options are included to permit specification of a variety of flow situations.IBM360,370; FORTRAN IV; OS/360; 270K bytes of memory, system card input and print output units, and, optionally, disk or tape units used for storage of problem data for subsequent plotting or problem input and error messages.

24569 **(ANL/NESC—847) DISPL1; 1- and 2-dimensional kinetics-diffusion partial differential equations solution.** Leaf, G.K.; Minkoff, M. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048847.

Reference report, ANL-77-12 Rev. 1.

DISPL1 is a software package for solving second-order nonlinear systems of partial differential equations including parabolic, elliptic, hyperbolic, and some mixed types. The package is designed primarily for chemical kinetics-diffusion problems, although not limited to these problems. Fairly general nonlinear boundary conditions are allowed as well as interface conditions for problems in an inhomogeneous medium. The spatial domain is one- or two-dimensional with rectangular Cartesian, cylindrical, or spherical (in one dimension only) geometry.IBM370/195,303x;CDC7600,6600,CYBER175; MORTRAN2 (80%) and FORTRAN (20%). By use of the MORTRAN2 preprocessor %F control card, the FORTRAN component is passed through the MORTRAN2 preprocessor along with the MORTRAN component.; OS/370 (IBM370/195,3033), SCOPE 2.1.3 (CDC7600), SCOPE 3.4.4 (CDC6600), NOS1.3 (CDC CYBER175); The IBM version DISPL1 source requires 600K bytes of storage for compilation. Compilation and execution of the DISPL1 sample problems, including the plot creation jobs, requires a maximum of 350K bytes. The CDC version requires a maximum of 121,000 (octal) words of executable storage for the CDC7600, 140,000 (octal) words for the CDC6600, and 135,000 (octal) words for the CYBER175 execution. In the MORTRAN2 preprocessing stage, the user can easily adjust the storage requirements to the optimum for a current problem. In addition to the standard input and print files, the program requires files assigned to logical unit 10 for reading restart data, logical unit 11 for writing data for a later restart, and logical unit 12 for writing plotting data.

24570 **(CONF-810809—31) New data on the heat capacity of liquid ^{3}He.** Roach, P.R.; Eckstein, Y.; Meisel, M.W. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01. Order Number DE83008527.

From 16. international conference on low temperature physics; Los Angeles, CA, USA (19 Aug 1981).

Portions are illegible in microfiche products.

Recent heat capacity measurements on liquid ^{3}He by Haavasoja have shown much smaller values than previous measurements by Wheatley. We have measured P/sub v/(T) from which we can derive values for ∂C/sub v/∂ v. A comparison with values of ∂C/sub v//∂ v obtained from the actual heat capacity measurements shows agreement between our data and those from the heat capacities of Wheatley but disagreement with those from the heat capacities of Haavasoja. This suggests that the large discrepancy between the two sets of heat capacities originates with a problem in the data of Haavasoja.

24571 **(NP—3770038) Yield of the oxidation of very rarefied propane/air mixtures in catalytic fluidized beds.** Holtmann, H.D. (Bochum Univ. (Germany, F.R.). Abt. Maschinenbau und Konstruktiven Ingenieurbau). 21 Feb 1980. 137p. (In German). NTIS (US Sales Only), PC A07/MF A01. Order Number DE83770038.

Thesis.

Experts have only recently disagreed about the ruling research work in the field of gas/solid fluidized beds, whether gas remixing in the suspension phase is possible. Remixing is a decisive unknown quantity for catalytic reactions which lowers the desired high degree of conversion. The degree of conversion depending on its influencing parameters was determined in this study. The minimum fluidization rate as well as the corresponding height and porosity are determined to characterize the fluidized bed state for the chosen system and operation parameters and are checked with published correlations. Particular attention should be paid to the description of the catalyst and its physical and chemical properties, as well as to the flow mechanical state. The oxidation of a greatly rarefied propane/air mixture serves as model reaction.

24572 **Universal behavior in the electrical conductivity of strong-scattering expanded fluid metals.** Laughlin, R.B. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physical Review [Section] B: Condensed Matter;* **26**: No. 12, 7019-7022(15 Dec 1982). Contract W-7405-ENG-48.

We have observed that the resistivities of a number of strong-scattering expanded fluid metals are a simple universal function of the volume gained upon expansion. We discuss possible causes of this effect.

24573 **Self-similar solutions for converging shocks and collapsing cavities.** Lazarus, R.B. (Los Alamos Scientific Lab., NM). *SIAM (Society for Industrial and Applied Mathematics) Journal on Numerical Analysis;* **18**: No. 2, 316-371(Apr 1981).

A complete analysis is attempted of the self-similar solutions for the converging shock and collapsing cavity problems, in spherical and cylindrical geometry, for a perfect gas with arbitrary adiabatic exponent $\gamma > 1$. Emphasis is given to the rich variety of previously neglected nonanalytic solutions, and to a numerically and what can be derived algebraically. New solutions are described which contain additional converging shocks, arriving at the origin concurrently with the initial shock or free surface. Some of these new solutions are entirely analytic, except at the shocks themselves, and some are not; in some cases, only one secondary shock is possible, in other cases an arbitrary number. The physical significance of previously rejected partial solutions is discussed. The stability of solutions is discussed in a narrow (one-dimensional) sense. Finally, a study is urged of the asymptotic approach (or nonapproach) to self-similarity of direct numerical integrations of the original partial dif-

ferential equations; it is argued that the evidence for approach to a unique self-similar solution is not convincing.

REFER ALSO TO CITATION(S) 24608, 24619

24575 **(BONN-HE—82-16) Results from PETRA.** Hilger, E. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Jul 1982. 31p. (CONF-8205116—4). NTIS (US Sales Only), PC A03/MF A01. Order Number DE83750137.

From 5. international conference on novel results in particle physics; Nashville, TN, USA (24 May 1982).

A selection of most recent results obtained by the five experiments CELLO, JADE, MARK J, PLUTO, and TASSO at PETRA is presented. The many interesting new results include, for example, the observation of effects of 2sup(nd) order QCD, details of inclusive hadron production, and the measurement of the forward-backward asymmetry in lepton pair production due to week and electromagnetic interference.

24576 **(DOE/ER/03069—T3) Production mechanisms of high mass muon pairs. Technical report number 117.** Antreasyan, D.; Atwood, W.; Becker, U. (Massachusetts Inst. of Tech., Cambridge (USA). Lab. for Nuclear Science). 11 Mar 1981. Contract AC02-76ER03069. 13p. NTIS, PC A02/MF A01. Order Number DE83009156.

We report the results of a study of the production mechanism of inclusive dimuon production from the reaction $p + p \rightarrow \mu \mu + X$ at CERN-ISR. The present experiment was done at the center of mass energies $\sqrt{s}$ + 62 and 44 GeV and in the dimuon pair invariant mass region m = 3 to 25 GeV. The dependence on the Feynman variable x has been measured. The average transverse momentum is found to increase with $\sqrt{s}$ and with mass and reaches <p/sub T/> = 1.9 GeV and is compatible with predictions from QCD gluon processes.

24577 **(DOE/ER/40033—8) High p/sub T/ π0 production with $\alpha\alpha$ and αp beams at the CERN ISR.** Angelis, A.L.S.; Baltay, C.; Basini, G. (Rockefeller Univ., New York (USA). Dept. of Experimental Physics; European Organization for Nuclear Research, Geneva (Switzerland)). Jul 1981. Contract AC02-81ER40033. 12p. (CONF-810760—2). NTIS, PC A02/MF A01. Order Number DE82000593.

From International conference on high energy physics (Or European Physical Society conference); Lisbon, Portugal (9 Jul 1981).

The invariant cross-sections of π^0's produced in $\alpha\alpha$ and αp collisions at the ISR were measured out to 7 GeV/c in p/sub T/. These measurements will be compared with π^0 production in pp collisions at equivalent values of $\sqrt{s}$/nucleon, and the variation of the nuclear A-dependence term α with p/sub T/ will be determined. Correlations of π^0's with the trigger π^0 will also be presented.

This report contains the proceedings of the LAMPF Workshop on Nuclear and Particle Physics at Energies up to 31 GeV, New and Future Aspects, held in Los Alamos, January 5 to 8, 1981. Included are invited talks and contributed papers covering recent developments in (a) weak and unified interactions (including discussions of neutrino oscillations), (b) the hadronic description of strong interactions, (c) the quark description of strong interactions, (d) hypernuclei, and (e) new facilities and proposed experiments. One of the motivations for the Workshop was to explore physics justifications for a future high-intensity proton accelerator in this energy regime. Separate abstracts were prepared for papers from this meeting. Six papers were previously included in the data base.

24579 **(LA—8775-C, pp 8-17) Perspectives on weak interactions.** Cabibbo, N. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The advances in experimental facilities and methods offer new opportunities for pushing down the limits on theoretically unexpected phenomena. These opportunities are as important as those offered by conducting experiments that are suggested by current theory. This talk concentrates on the latter, and in particular on the possible contributions of experiments carried out at intermediate energies with high intensity facilities. Areas discussed are: (1) precision tests of the Glashow-Salam-Weinberg (GSW) theory; (2) quark mixing and CP-violation; and (3) grand unified theories and neutrino oscillations.

24580 **(LA—8775-C, pp 18-35) Experiments in the kaon system.** Winstein, B. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

In this talk, we will review current experiments on kaon decays with a strong emphasis on those addressing the question of CP non-conservation. Experiments which could only be attempted with significantly more intense Kaon beams than now exist (Kaon Factory experiments) are also discussed. A point of view, currently ascribed to by the author, has been adopted for this talk: The Kobayashi-Maskawa model which links the CP non-conservation to the mass mixing among the quark doublets is most appealing and it is extremely important to test it against the superweak hypothesis.

24581 **(LA—8775-C, pp 36-57) Rare decays of pions & muons: a review.** Hargrove, C.K. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A general review of rare decays of pions and muons is given. The status of rare decays of pions and muons in the context of unified gauge theories is briefly discussed. The status of the experimental evidence is reviewed. Finally, an overview of current experiments is given.

24582 (LA—8775-C, pp 92-93) **Quark-diagram contribution to K/sub L/ → γ γ.** Ma, E.; Pramudita, A. (Univ. of Hawaii, Honolulu). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219. Contract AC03-76ER00511.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We compute the one-loop quark-diagram contribution to K/sub L/ → γ γ in the standard model, without making the usual approximation that the internal quark masses are much smaller than the W-boson mass.

24583 (LA—8775-C, pp 94-95) **Preliminary report on a new pion beta decay experiment.** Highland, V.L.; McFarlane, W.K.; Auerbach, L.B. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The conserved vector current hypothesis (CVC), a cornerstone of the unified theory of electromagnetic and weak interactions, provides a precise prediction for the branching ratio of the pion beta decay reaction $\pi^+ \rightarrow \pi^0 e^+ nu$. The predicted ratio is 1.045×10^{-8} with an uncertainty of 0.5% due to errors in the pion masses and an additional 1% uncertainty due to the electromagnetic corrections. We have just completed taking data on a new pion beta decay experiment. Here we present a preliminary report on the experiment to indicate the extent and quality of the data obtained. In contrast to previous experiments done with stopping pions, this one observes decays in flight of a 400-MeV π^+ beam in the P^3 East Channel at LAMPF.

24584 (LA—8775-C, pp 97-124) **Neutrino oscillations.** Mann, A.K. (Univ. of Pennsylvania, PA). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219. Contract AC02-76ER03071.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

A status report on neutrino oscillations is presented. Reasons are given for the increasing interest in neutrino oscillations, and the theory is reviewed with illustrative examples. A summary of types of neutrino oscillations experiments and of data available at the moment is given. Some representative proposed neutrino oscillation experiments are discussed with emphasis on experiments at LAMPF and the BNL AGS.

24585 (LA—8775-C, pp 125-133) **Grenoble neutrino experiment.** Hahn, A. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The electron-antineutrino spectrum has been measured at a 8.76 m positron from the point-like core of the ILL ^{235}U fission-reactor, using the reaction anti nu/sub e/ + p → e^+ + N. Positrons and neutrons were detected in coincidence by means of a low-background liquid scintillator and ^3He detector system. The observed neutron correlated positron spectrum is consistent with an experimentally derived spectrum assuming no neutrino oscillations. Upper limits for the oscillation parameter are presented.

24586 (LA—8775-C, pp 134-140) **Status of U.C. Irvine neutrino oscillation detector.** Pasierb, E.L.; Gurr, H.S.; Kropp, W.R.; Mandelkern, M.; Nakamura, S.Y.; Price, L.; Reines, F.; Sobel, H.W. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Updated theoretical calculations of the reactions anti nu/sub e/ + d → n + p + anti nu/sub e/ and anti nu/sub e/ + d → n + n + e^+ have increased the value of the ratio of ratios, R, from values ranging between 0.38 and 0.40 to .41 and .43. A moveable neutrino oscillation detector is nearing completion and should be installed at a 2000 MW fission reactor at the Savannah River Plant this summer. The positron energy spectrum will be measured at distances ranging from 13 to 50 meters from the center of the reactor core.

24587 (LA—8775-C, pp 154-165) **Phenomenological analysis of reactor data for neutrino oscillations.** Silverman, D. (Univ. of California, Irvine); Soni, A. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Reactor data from experiments performed at different distances is analyzed. We find that no distance independent reactor anti nu/sub e/ spectrum, irrespective of its shape, can account for all the data with a CL ≧ .0028. Oscillation with 3(2)nu's yield fits to all the 4 experiments with CL ≃ .06 (.03) and to the two high statistics experiments with CL ≧ .31 (.18).

24588 (LA—8775-C, pp 166-184) **πN, anti KN, and KN phenomenology.** Kelly, R.L. (Lawrence Berkeley Lab., CA). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The current status of experimental and phenomenological knowledge of the spectrum of N, Δ, Y^*, and possible Z^* resonances is reviewed. The review concentrates on formation experiments, partial wave analyses, and quark models of baryon resonances. Particular emphasis is given to areas in which there are promising opportunities for future research.

24589 (LA—8775-C, pp 220-255) **Experimental evidence for dibaryons.** Spinka, H. (Argonne National Lab., IL). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This talk will attempt to summarize some of the experimental evidence dealing with dibaryon resonances. Specific suggestions for future measurements will be made.

24590 (LA—8775-C, pp 271-299) **Antiproton-nucleon experiments.** Tripp, R.D. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Recent investigations of antinucleon-nucleon interactions are in direct conflict with earlier experiments concerning the existence of narrow structures in the anti p N system. We here review the current status of formation experiments, summarize and comment upon production experiments, and point out deficiencies in the data.

24591 (LA—8775-C, pp 300-318) **Research program at Lear.** Dalpiaz, P. (Ferrara Univ., Italy). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

The purpose of this paper is to help make the case for a new machine being an antiproton factory as well as a kaon factory. The energy of such a high-intensity accelerator should be near 30 GeV, rather than the 15 GeV which would be adequate for the production of kaons as the most massive particle. Primarily, we wish to point out that there are regions of nucleon-antinucleon interactions which have not been carefully explored and which may contain interesting phenomena despite existing negative experiments.

24593 (LA—8775-C, pp 368-380) **Internal spin structure of the proton from high energy polarized e-p scattering.** Hughes, V.W. (Yale Univ., New Haven, CT). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219. Contract AC02-76ER03075.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

A review is given of our experimental knowledge of the spin dependent structure functions of the proton, which is based on inclusive high energy scattering of longitudinally polarized electrons by longitudinally polarized protons in both the deep inelastic and resonance regions, and includes preliminary results from our most recent SLAC experiment. Implications for scaling, sum rules, models of proton structure, and the hyperfine structure interval in hydrogen are given. Possible future directions of research are indicated.

24594 (LA—8775-C, pp 413-457) **Λ and Σ hypernuclear physics.** Barnes, P.D. (Carnegie-Mellon Univ., Pittsburgh, PA). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A general review of progress in hyper-nuclear physics is given. The current status of the development of the Λ-nucleus shell model is reported together with a discussion of the nuclear spin-orbit force for N, Δ, Λ and Σ nuclei. Natural line width calculations are compared to the data for the strong component of the Λ and Σ nucleus interaction. Calculations of the role of the four fermion weak interaction in the weak decay of Λ hypernuclei are compared to lifetime data. Special topics in two body and few body systems are also reviewed.

24595 (LA—8775-C, pp 458) **Preliminary report on an experiment to observe Σ hypernuclei in the 1p shell nuclei.** Hungerford, E.V. (Univ. of Houston, TX); Bart, S.; Hackenburg, R. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219. Contract AS05-76ER03948;AM06-76RL02230;AC02-76ER03244.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

An experiment designed to observe sigma hypernuclei in ^{6}Li and ^{16}O is in progress on the LESBI line at the Brookhaven AGS. The reaction (K^-, π^+) is used, which populates only the highest isopin states in the Σ hypernucleus. The intrinsic spectrometer resolution and finite size of the target provide an energy resolution in the excitation energy spectrum of approximately 3 MeV (FWHM). Preliminary data are interesting and may be used to extract information on the Σ-nucleus well depth and the expected Σ-hypernucleus level structure.

24596 (LA—8775-C, pp 487-498) **Speculative ten-year plan for nuclear physics at LAMPF.** Thiessen, H.A. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Recent results in nuclear physics at LAMPF are reviewed. Possibilities for several projects are briefly discussed, including a new low-energy pion spectrometer, a high-intensity polarized ion source, and utilization of the proton storage ring as a 1.5 GeV d.c. electron machine during the several months of each year that LAMPF is down. Some detailed proposals for facilities for nuclear physics at a high-intensity 30 GeV proton machine are discussed, and a second-order design for a kaon beam for use with the (K^-, π^-) reaction is given.

24597 (LA—8775-C, pp 519-525) **Results of a first round 150 MeV nu/sub μ/ oscillation experiment and implications for future LAMPF experiments.** Cortez, B. (Harvard Univ., Cambridge, MA); LoSecco, J.; Sulak, L.; Soukas, A.; Weng, W. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We report on a sensitive search for neutrino oscillation. A pure nu/sub μ/ beam of low energy was constructed at the Brookhaven AGS. The appearance of any nu/sub e/ in the beam would signify oscillations. To maximize sensitivity the energy of the neutrino beam was reduced to 150 MeV. The existing neutrino beam line and a 30T liquid scintillation calorimeter used in previous nu p scattering experiments were utilized.

24598 (LA—8775-C, pp 526-535) **Normal muon decay and the Los Alamos TPC project.** Kinnison, W.W. (Los Alamos National Lab., NM). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The Los Alamos National Laboratory high-statistics muon decay experiment, which utilizes a time projection chamber (TPC) for the detector, is described. The anticipated improvement in the experimental limits on the weak interaction coupling constants and their possible theoretical implications are presented. The discussion concludes with a status report on the experiment.

24599 (LA—8775-C, pp 536-540) **Search for muon number violation at LAMPF.** Hoffman, C.M. Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A group from Los Alamos, Stanford and Chicago is planning to search for the muon number violating processes $\mu^+ \rightarrow e^+\gamma$, $\mu^+ \rightarrow e^+e^+e^-$ and $\mu^+ \rightarrow e^+\gamma\gamma$ in a large modularized sodium iodide (NaI) detector known as the Crystal Box. A list of participants is

shown. A schematic view of the apparatus is shown. The detector consists of the array of NaI crystals which surround 36 scintillation counters, a 700-wire cylindrical drift chamber and a thin target in which μ^+'s stop and decay. There will be 360 crystals measuring 6.3 x 6.3 x 30.5 cm each viewed by a photomultiplier and 36 crystals measuring 6.3 x 6.3 x 70 cm, viewed by two photomultipliers. The detector totals approximately 2 tons of NaI. The detector has a solid angle of 60% of 4π for the detection of one particle and about 25% of 4π for the detection of a 3-body decay.

24600 (LA—8775-C, pp 561-566) **Recent results and physics at a future high intensity facility of E ≦ 31 GeV.** Henley, E.M. (Univ. of Washington, Seattle). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Recent theoretical and experimental investigations have shown the value and necessity of searches for rare events and of high precision experiments. For such investigations a high intensity and higher energy accelerator which can produce new beam such as kaons and antiprotons should be very helpful. At the present time there are more questions than answers. Thus, we do not understand the connection between nuclear physics as we have known it, with meson exchange forces, and the quark-parton model with QCD forces. We do not understand quark confinement. We do not understand the connection of the electroweak and QCD forces. Although there are conjectures and theories, experimental proof is required. Our grasp of weak forces and of nuclear structure should prove helpful in proposing theoretical answers. A high intensity higher energy accelerator should be helpful in providing the required experimental confirmation.

24601 **Study of A_3 production in the reaction $\pi^- p \rightarrow K^0 K^- p$ at 50, 100, and 175 GeV/c.** Bromberg, C.; Dickey, J.O.; Fox, G. (California Institute of Technology, Pasadena, California 91125). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 1-11(1 Jan 1983).

The reaction $\pi^- p \rightarrow K^0 K^- p$ has been measured from 50 to 175 GeV/c. The production characteristics of the A_3 have been analyzed. We find spin and t dependence similar to lower energies, but the cross section falls rapidly with energy. In a Regge description of $\pi^- p \rightarrow A_3^- p$ our data imply a rather small Pomeron-exchange component.

24602 **Ratio σ/sub L//σ/sub T/ from deep-inelastic electron scattering.** Mestayer, M.D.; Atwood, W.B.; Bloom, E.D.; Cottrell, R.L.A.; DeStaebler, H.; Prescott, C.Y.; Rochester, L.S.; Stein, S.; Taylor, R.E.; Trines, D. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 285-288(1 Jan 1983). Contract AC03-76SF00515.

Values of R = σ/sub L//σ/sub T/ for deep-inelastic electron-nucleon scattering have been derived from several experiments with incident electron energies up to 20 GeV. Included are previously unpublished measurements at intermediate angles (largely at 15° and 18°). An average value of R = 0.22 +- 0.1 is obtained for the kinematic region covered by the experiments. No significant kinematic dependence of R is observed. A table of extracted values of the structure functions νW_2 and $2MW_1$ is also presented.

24603 **Brookhaven: glueballs.** *CERN Courier;* **22**: No. 10, 415-416(Dec 1982).

Published in summary form only.

From 13. international symposium on multiparticle dynamics; Volendam, Netherlands (6 Jun 1982).

Aachen-Bonn-CERN-Muenchen-Oxford Collaboration.

Charged current νp and anti νp interactions observed in exposures of BEBC filled with hydrogen to a wideband neutrino and antineutrino beam are analyzed to yield the quark density ratio d/u as function of x. The method has minimum bias. The dominance of u quarks at large x is clearly seen.

24605 **(CONF-820899—3) Successes and failures of the constituent quark model.** Lipkin, H.J. (Argonne National Lab., IL (USA); Weizmann Inst. of Science, Rehovoth (Israel); Fermi National Accelerator Lab., Batavia, IL (USA)). 1982. Contract W-31-109-ENG-38. 59p. NTIS, PC A04/MF A01. Order Number DE83008684.

From Summer school on nuclear dynamics; Victoria, BC, Canada (23 Aug 1982).

Our approach considers the model as a possible bridge between QCD and the experimental data and examines its predictions to see where these succeed and where they fail. We also attempt to improve the model by looking for additional simple assumptions which give better fits to the experimental data. But we avoid complicated models with too many ad hoc assumptions and too many free parameters; these can fit everything but teach us nothing. We define our constituent quark model by analogy with the constituent electron model of the atom and the constituent nucleon model of the nucleus. In the same way that an atom is assumed to consist only of constituent electrons and a central Coulomb field and a nucleus is assumed to consist only of constituent nucleons hadrons are assumed to consist only of their constituent valence quarks with no bag, no glue, no ocean, nor other constituents. Although these constituent models are oversimplified and neglect other constituents we push them as far as we can. Atomic physics has photons and vacuum polarization as well as constituent electrons, but the constituent model is adequate for calculating most features of the spectrum when finer details like the Lamb shift are neglected. 54 references.

Paper copy only, copy does not permit microfiche production.

We compute the q/sub i/q/sub j/γ transition amplitude for off-shell and on-shell quarks with flavors i not equal to j, in the standard weak interaction model. The results we present are valid for all quark and photon momenta and for all external and internal quark masses. We discuss the Feynman rules and Ward-Takahashi identities in the 't Hooft-Feynman gauge. Our results can be applied to a variety of phenomena such as the electric dipole moment of the neutron, the process $e^+ e^- \rightarrow$ t anti c, and flavor changing transitions with either gluon or photon emission.

24607 (LA—8775-C, pp 58-84) **Muon number violating kaon decays.** Herczeg, P. (Los Alamos National Lab., NM). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

We discuss the decays K/sub L,S/ → μe, K/sub L,S/ → $\pi^0 \mu e$, and $K^{+-} \rightarrow \pi^{+-} \mu e$ in current theoretical schemes which imply the existence of neutral flavor-changing bosons. Possible pat-

terns for the branching ratios of these decays are considered taking into account constraints imposed by pertinent data.

A high-intensity facility will allow precision tests of expected effects and better searches for effects which are expected to be absent or unobservably small. Both cases can have significant impact on the search for the correct Grand Unified Theory. Neutrino oscillation experiments at a high-intensity facility are to be encouraged and can also have a strong impact on GUTS. The burning question remains: why is the muon, or in more modern guise: what (if any) is the horizontal gauge symmetry, and what is the scale for violating this symmetry if it exists. A high-intensity intermediate energy facility offers one of the best opportunities available to answer these questions.

The odd-parity baryons have provided a graveyard for many cherished ideas about hadrons. The simple quark shell model, with QCD-inspired phenomenological perturbations, is the only model able to describe the states with even partial qualitative success. There are also important unexplained residual dynamical effects. Resonance decays can be accounted for, provided the usual spectator model is abandoned. Better experimental data could help to sort out the many remaining puzzles.

24610 (LA—8775-C, pp 211-219) **I=1 dibaryons - theoretical.** Kloet, W.M. (Rutgers Univ., New Brunswick, NJ). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

New data analyses predict resonance poles close to the NΔ branchcut. Model calculations show $^3F_3$ and $^1D_2$ phase parameters in qualitative agreement with the data, but cannot make definitive statements about resonances yet. They show, however, that counterclockwise loops in Argand diagrams are not always resonances.

24611 (LA—8775-C, pp 267-270) **Relation between dσ (p + d $\rightarrow$ ^{3}He + γ) and dσ (p + d $\rightarrow$ ^{3}He + π^0) at intermediate energy based on isobar dominance.** Nefkens, B.M.K.; Briscoe, W.J.; Fitzgerald, D.H.; Silverman, B.H. The reaction mechanism responsible for the reactions p + d $\rightarrow$ ^{3}He + γ and p + d $\rightarrow$ ^{3}He + π^0 are quite likely rather similar. We speculate that they involve the excitation of an intermediate state isobar, analogous to pion production in NN interactions. The leading candidate for the isobar at our incident beam energies is the P_{33} (1232) πN resonance.

Physical implications of QCD for strong forces in soft processes are discussed. Topics include long-range force, Van der Waals force, nuclear force, hadron and quark structures. In the absence of a reliable calculational scheme, phenomenological models have been built that incorporate QCD ideas as far as possible. In the framework of those models calculations have been made that provide an understanding of the soft processes in terms of quarks and gluons. We review recent work on nuclear potential, form factors at low Q^2, pion decay constant, inclusive distribution of low p/sub T/, and radiation length of fast quark in nuclear matter.

This short talk gives some very general comments on what I see as the impact on nuclear physics of the last ten years' developments in the picture of the nucleon and the hadron. On the other hand there may also be some nuclear physics lessons - lessons we've learned by trying to deal with the multi-fermion system over a long period - and I will discuss what those lessons might be for the problem at hand, hadron phy-physics up to 31 GeV. After that I will discuss a number of implications of quarks for low energy physics.

24614 (LA—8775-C, pp 381-387) **Three strange quark system.** Aerts, A.T.; Heller, L. (Los Alamos National Lab., NM). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

A potential model for the heavy three quark system is explained, which results in Coulomb-like two-body and confining three-body interactions between the quarks. Asymptotic freedom effects are included. The application of this potential to the Ω^- (s^3) system is discussed and its predictions are compared to those of a purely two-body potential model.

24615 (LA—8775-C, pp 400-409) **Joining the quark and hadron exchange descriptions of strong interactions.** Lomon, E. (Massachusetts Inst. of Tech., Cambridge). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

Quark structure of hadrons cannot be ignored in hadron-hadron interactions which already probe the region of asymptotic freedom at relatively low energies. But one cannot compute the full interaction directly with QCD because: (1) very high order processes enter at medium and small momentum transfer; (2) bag models approximate confinement, and (3) contain no theoretical information on longer range interactions of (unconfined) color singlet pairs. Our present understanding of nucleon-nucleon and nuclear data implies that nucleon degrees of freedom and hadronic field theory are adequate descriptions for r $\geq$ 1 fm. The total potential fits np and pp data for laboratory energy E/sub L/ < 400 MeV. For higher energies the dynamic effects of production thresholds must be in-

cluded. Work by Kloet and Silbar and by Lomon has shown that these can account for data up to E/sub L/ = 800 MeV, including the dibaryonic structures seen.

The possible existence of light supernuclei and the binding of charmed baryons in nuclear matter has been studied using OBEP under SU(4) symmetry. Bound light supernuclei such as C_1N (I=3/2, J=0), C_1NN(I=2, J=1/2) and C_6NN(I=1, J=1/2, I=0, J=1/2 and 3/2) are predicted and the binding of C in nuclear matter is expected to be much stronger than that of baryons.

24617 (LA—8775-C, pp 459) **Study of the T = 3/2 ΣN interaction.** Rosenthal, A.S. (TRIUMF, Vancouver, British Columbia). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

One boson exchange models of the ΣN interactions have been studied, preparatory to a full investigation of Σ-hypernuclei. The simplest channel is T = 3/2 where the strong decay ΣN → ΛN is isospin forbidden and in which there is the outstanding problem of a possible Σ^-n bound state. Standard analyses proceed by fitting meson coupling constants to NN and the small amount of ΛN and ΣN data, a procedure which involves a large number of free parameters. This analysis has used the OBEP with recent parameters derived from meson-baryon scattering, an independent source of information.

24618 (LA—8775-C, pp 475-476) **Uncertainty in the K^+-nucleus interaction below 1 GeV.** Cotanch, S.R. (North Carolina State Univ., Raleigh). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

There is no reason to believe that baryon number should be a good quantum number. No violation of this conservation law has yet been seen. However, we are living in a period when it has become popular and important to look for ways in which the symmetries and their corresponding conservation laws might be broken. In fact, there now exist a plethoria of theories, the so-called unified theories in which baryon number emerges unconserved. In particular, for some theories, Δ B = 2 is allowed at a level that should make a process like n reversible anti n observable in the laboratory. This paper discusses how a practical test of such theories might be made.

It appears that nuclear reactions (induced by light or heavy ions) are dominated by nucleon-nucleon (N-N) collisions at least to the 10% level in σ/sub R/ 1). Therefore studies of anti p-nucleus (anti p-eta) interactions are likely to reveal fascinating new aspects of nuclear science because the anti N-N interaction is radically different from the N-N case, particularly at low incident energies (E/sub i/<500 MeV). First of all, low energy anti N-N elastic scattering is quite forward peaked while N-N systems exhibit fairly isotopic angular distributions. Secondly, there are two new components to σ/sub T/ which do not exist in the N-N case: a) charge exchange, which is always <5% of σ/sub T/, and (b) annihilation which is large, particularly at low incident energies.

24621 (LA—8775-C, pp 547-560) **Effects of strong attraction in antiproton-nucleus scattering.** DiGiacomo, N.J.; DeVries, R.M. (Los Alamos National Lab., NM). Mar 1981. NTIS, PC A25/MF A01. Order Number DE83006219.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Since the observation of the antiproton 25 years ago, much theoretical and experimental consideration has been given to the interaction of antinucleons with nucleons and deuterons. To this day aspects of the interaction, such as the annihilation process and the existence of bound states and resonances, stand as interesting unsolved problems. Surprisingly, anti NN studies have not engendered parallel investigations of anti p nucleus (anti pA) scattering. Little quantitative information exists for the anti pA system, particularly at energies below 1 GeV. To this end, we discuss means of obtaining quantitative insight into the anti pA interaction by examining the sensitivity of the total reaction cross section (σ/sub R/) to the strength and energy dependence of the attraction.

24622 (LA—9572-C-Vol.1, pp 136-155) **What can be learned from strong elementary hadronic interactions at and below 16 GeV.** Lomon, E.L. (Massachusetts Inst. of Tech., Cambridge). Nov 1982. NTIS, PC A18/MF A01. Order Number DE83005000.

From 2. LAMPF workshop; Los Alamos, NM, USA (19 Jul 1982).

Portions are illegible in microfiche products.

Hadronic field theory is impossible to calculate at short range because it requires very high order processes. Moreover it is an unacceptable theory if we believe in the underlying quark and gluon structure. On the other hand quantum chromodynamics is simplified by asymptotic freedom at short distances. What can hadronic probes discover about the detailed dynamics of light quarks and gluons. We review the following aspects: how quark structure is related to available intermediate energy data - not through resonances, but through f- (or P) matrix poles; the conditions for the existence of narrow resonances related to quark degrees of freedom; experimental requirements for data appropriate to analyzing quark dynamics; variable energy, polarized beam intensity, high duty factor; and improving the precision of the relation to quark dynamics, otaining further information on the nature of asymptotic freedom, confinement, and hidden color effects.

24623 **Radiative decay width of the rho^- meson.** Jensen, T.; Berg, D.; Chandlee, C. (University of Rochester, Rochester, New York 14627). *Physical Review [Section] D: Particles and Fields;* **27**: No. 1, 26-46(1 Jan 1983).

We present data on coherent rho^- production on nuclear targets and our application of the Primakoff formalism for extracting the radiative decay width for the transition $rho^- \rightarrow \pi^- \gamma$. Assuming

the presence of both electromagnetic and strong contributions to coherent production, we obtain $\Gamma(\rho^- \to \pi^- \gamma) = 71 \pm 7$ keV, a result in good agreement with SU(3).

24624 **Nature of nonperturbative effects in lepton-nucleon scattering.** Barnett, R.M. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 98-104(1 Jan 1983). Contract AC03-76SF00515.

There is evidence for substantial nonperturbative effects in the structure functions extracted from deep-inelastic lepton-nucleon scattering. These effects have a major impact on α_s and Λ determinations. Results which I reported previously for μN and νN scattering (F_2 and xF_3) are extended to include ed data which are at lower W^2 and higher x and have extremely high statistics. Possible analytical forms for higher-twist terms and for α_s are considered in detail here using μN, νN, and ed data.

24625 **Scaling violations in inclusive e^+e^- annihilation spectra.** Peterson, C.; Schlatter, D.; Schmitt, I.; Zerwas, P.M. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 105-111(1 Jan 1983). Contract AC03-76SF00515.

The origin of the observed scaling violations in inclusive e^+e^- annihilation is investigated. Perturbative jet evolution is not necessarily the only reason for scale breaking in the hadron spectra at present energies. Remnants of finite-transverse-momentum and mass effects are still important in nonperturbative, cascade-type, jet formation in the $\sim$10 GeV range. Heavy-quark fragmentation has a strong impact on hadronic inclusive spectra. A simple parametrization for the heavy-quark fragmentation function is given which describes well recently measured charmed-meson spectra. Taking these effects into account, good agreement with the observed scaling violations is obtained in cascade-type jet models with hard-gluon bremsstrahlung.

24626 **Highly relativistic nucleus-nucleus collisions: The central rapidity region.** Bjorken, J.D. (Fermi National Accelerator Laboratory,* P.O. Box 500, Batavia, Illinois 60510). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 140-151(1 Jan 1983).

The space-time evolution of the hadronic matter produced in the central rapidity region in extreme relativistic nucleus-nucleus collisions is described. We find, in agreement with previous studies, that quark-gluon plasma is produced at a temperature $>$ or $\approx$200—300 MeV, and that it should survive over a time scale $>$ or $\approx$5 fm/c. Our description relies on the existence of a flat central plateau and on the applicability of hydrodynamics.

24627 **Quark-tadpole transitions and the $\Delta I = (1/2)$ rule in K decays.** McKellar, B.H.J.; Scadron, M.D. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 157-165(1 Jan 1983).

We show that the Nambu-Goldstone structure of the tightly bound q-barq pion and kaon allows the weak s-d quark tadpole to contribute to the $\Delta S = 1$ nonleptonic weak decay amplitudes. This tadpole, bound to the kaon in a quark loop, accounts for the $\Delta I = (1/2)$ rule and the observed magnitude of the $\Delta I = (1/2)$ $K \to 2\pi$ amplitude. With a simple vacuum-saturation model of the $\Delta I = (3/2)$ $K \to 2\pi$ amplitude the observed relative sign of the $\Delta I = (1/2)$ and $\Delta I = (3/2)$ amplitudes is also correctly obtained.

24628 **Analysis of preon models with a small number of flavors.** Rizzo, T.G. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 272-284(1 Jan 1983).

We analyze a large number of four- and five-preon models along with several six-preon models. By imposing constraints such as cancellation of anomalies and reproduction of the usual quarks and leptons as composites we are able to eliminate many of these from further consideration. If we try to embed the electroweak interactions into the flavor group G/sub PF/, we are left with a single, five-preon model. The remaining model is inconsistent with grand unification and asymptotic freedom. We conclude that the simplest preon model must have at least six flavors and contain a single 3/sub C/ and three 1/sub C/'s.

24629 **Quantum chromodynamics and the helicity structure of psi$\to\gamma 2^{++}$.** Close, F.E. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 311-312(1 Jan 1983). Contract AC03-76SF00515.

The helicity structure of psi$\to\gamma f$ disagrees with a QCD model prediction by 4σ. An empirical rule that yields the data precisely is noted in the hope of elucidating the dynamics. The importance of psi$\to\gamma\theta$ and $\Upsilon\to\gamma f$ helicity measurements is stressed.

24631 **(DOE/ER/70004—297) Status of theories of CP non-invariance.** Deshpande, N.G. (Oregon Univ., Eugene (USA). Inst. of Theoretical Science). 1981. Contract AT06-76ER70004. 8p. NTIS, PC A02. Order Number DE82008303.

Paper copy only, copy does not permit microfiche production.

Different gauge models of CP nonconservation are reviewed. When both experimental constraints like the value of epsilon'/epsilon and theoretical constraints like grandunification are imposed, Kobayashi-Maskawa model seems the most acceptable theory. We also review the strong CP problem.

24632 **Spontaneous breaking of global B-L symmetry and matter-antimatter oscillations in grand unified theories.** Mohapatra, R.N.; Senjanovic, G. (Physics Department, The City College of the City University of New York, New York, New York 10031). *Physical Review* [*Section*] *D: Particles and Fields;* **27**: No. 1, 254-263(1 Jan 1983).

We explore the consequences of the hypothesis that B-L symmetry, which is exact in the standard model based on the SU(2)/sub L/ x U(1) x SU(3)/sub c/ gauge group and its extension to the minimal SU(5) theory, is a spontaneously broken global symmetry. This results in possibly observable rates for $\Delta(B\text{-}L) = 0$, $\Delta B = 2$ hydrogen-antihydrogen transitions and double proton decay $pp \to e^+e^+$ ($\mu^+\mu^+$) and $\Delta(B\text{-}l) \neq 0$, $\Delta B = 2$ neutron-antineutron mixing and $p+n \to \pi$'s; furthermore, a relation between the transition times tau/sub HhyphenH/, tau/sub n/-n-bar, Majorana neutrino mass, and the mass of a doubly charged Higgs particle Δ^{++} emerges. At the level of SU(2)/sub L/ x U(1) x SU(3)/sub c/, for tau/sub n/-n-bar$\approx 10^7$ sec and m++$\approx$20 GeV, we predict tau/sub HhyphenH/$\approx 10^3$ yr and tau/sub p/p$\approx 10^{31}$ yr, both of which are experimentally testable numbers. The embedding of our model in SU(5) is discussed in detail, with the analysis of tau/sub p/ and $\sin^2\theta$/sub W/ besides matter oscillations.

24633 **Finite element approximation in quantum field theory.** Bender, C.M. (Washington Univ., St. Louis, MO (USA). Dept. of Physics); Guralnik, G.S. (Brown Univ., Providence, RI (USA). Dept. of Physics); Sharp, D.H. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Nuclear Physics [Section] B;* **207**: No. 1, 54-76(1 Nov 1982).

Lattices are conventionally used to regulate quantum field theory. However, lattices have a number of drawbacks, one of the most noteworthy being the awkwardness which arises in treating the first difference operator associated with the fermion kinetic energy. We propose here an alternative to the conventional lattice formulation of quantum field theories. This alternative is based on the method of finite elements, which has been a powerful tool in continuum mechanics and fluid dynamics for many years. We believe that this method may be advantageous in quantum field theory because it treats bosons and fermions on a nearly equal footing. This is possible because in the finite element method one does not introduce a finite difference approximation for derivatives. In this paper, we adapt the finite element technique to quantum field theory, and apply it to several elementary field theory models.

24634 **Analysis of the lattice, strong coupling series for $g_0$phi^4 field theory in d dimensions.** Baker, G.A. Jr.; Benofy, L.P.; Cooper, F.; Preston, D. (Los Alamos National Lab., NM (USA). Theoretical Div.). *Nuclear Physics [Section] B;* **210**: No. 3, 273-288(25 Oct 1982).

We analyze the renormalized strong coupling series for lattice g_0PHI^4 field theory which is a double series in $x = M^4a^4/g_0$sup(4-d) and $y = 1/M^2a^2$, where M is the renormalized mass, a the lattice spacing, g_0 the bare coupling constant and d the dimension of space-time. We extrapolate to large y for fixed x by using a Pade-like extrapolation technique. We study the dimensionless renormalized coupling constant G/Msup(4-d) and find that as we approach the continuum ($x \to 0$, $y \to$ infinity) the entire spectrum of g_0 from zero to infinity can be studied. Our results for d = 1, 2, 3, 4 based on a series in y up to y^5 and in x up to x^5 show that for fixed lattice spacing a, G/Msup(4-d) is a monotonic function of g_0 ranging from zero at $g_0 = 0$ to a maximum at $g_0 =$ infinity. Using the high temperature expansion results, we have also derived 9 terms in y on 8 lattices of dimension 1, 2, 3 and 4 for the linear term in x, and studied this series to see if one can see a breakdown in this monotonic behavior of G for large y. The analysis of this latter series is inconclusive.

24635 **U(3) four-dimensional lattice gauge theory and Monte Carlo calculations.** Creutz, M. (Brookhaven National Lab., Upton, NY (USA)); Moriarty, K.J.M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Royal Holloway Coll., Englefield Green (UK). Dept. of Mathematics). *Nuclear Physics [Section] B;* **210**: No. 3, 377-387(25 Oct 1982).

Monte Carlo results for the pure U(3) lattice gauge theory on a 6^4 lattice are reported. Wilson loops and the string tension are presented. The first-order phase transition in U(3) is reflected quite clearly in a discontinuity in the string tension at $\beta = \beta$sub(c). The U(1) factor of U(3) is extracted using the determinant of the Wilson loops. As expected, the U(1) component appears to deconfine at the phase transition.

24636 **Lorentz-non-invariant counter-terms in QCD in a general axial gauge.** Leibbrandt, G.; Matsuki, T. (Guelph Univ., Ontario (Canada). Dept. of Mathematics and Statistics); Okawa, M. (Brookhaven National Lab., Upton, NY (USA)). *Nuclear Physics [Section] B;* **206**: No. 3, 380-386(18 Oct 1982).

It is shown in the context of a pure Yang-Mills theory that the solution of the Slavnov-Taylor identities in a general axial gauge admits counter-terms which may or may not be Lorentz invariant. It follows from the background field method that these counter-terms must be gauge invariant. The Lorentz-non-invariant counter-terms appear already at the one-loop level and depend both on the gauge parameter α and the non-covariant vector nsub(μ).

24637 **(DOE/ER/70004—290) Polarization structure of reactions at theta/sub C.M./ = π/2.** Goldstein, G.R.; Moravcsik, M.J. (Oregon Univ., Eugene (USA). Inst. of Theoretical Science; Tufts Univ., Medford, MA (USA). Dept. of Physics). Aug 1981. Contract AT06-76ER70004. 18p. NTIS, PC A02. Order Number DE82008308.

Paper copy only, copy does not permit microfiche production.

The polarization structure of a reaction of particles with arbitrary spins is described at 90° for the case when one or several pairs of identical particles form the reaction. The simplification of the structure is described in the optimal formalism, and particularly in the helicity and transversity frames, and the reduction in the number of independent amplitudes is tabulated for arbitrary spins and for a large assortment of combinations of symmetries. The constraints due to only one pair of identical particles are particularly stressed since these have hardly been utilized in the past. The results are illustrated on elastic proton-proton scattering, and data for this reaction at 800 MeV are analyzed at 90° both phenomenologically and with a specific aim of testing suggestions for the existence of dibaryon resonances. It is shown that at 800 MeV and 90° the proton-proton scattering data are compatible with a resonance of the type that has been suggested, though the data do not demand such a resonance.

24638 **Scattering theory in arrangement channel quantum mechanics.** Evans, J.W.; Hoffman, D.K.; Kouri, D.J. (Ames Laboratory and Department of Chemistry, Iowa State University, Ames, Iowa 50011). *Journal of Mathematical Physics (New York);* **24**: No. 3, 576-587(Mar 1983). Contract W-7405-ENG-82.

The time-independent scattering theory associated with the non-self-adjoint matrix Hamiltonians H of arrangement channel quantum mechanics is presented in detail first using the 3-particle case as an example. A key feature is the biorthogonality of a suitably constructed set of scattering eigenvectors and duals. Channel space Moeller operators, S- and T-matrices are defined and a variety of properties investigated including the way multichannel unitarity is embedded into the theory. Some remarks on the time-dependent theory are also made. A detailed discussion of channel space density matrix scattering theory (of interest, e.g., in reactive kinetic theory) is presented using the Liouville representation. We describe some special cases including the exclusion of breakup and 2 x 2 choices of three particle H.

24639 **(ANL/NESC—815) ALVIN; differential-integral data consistency.** Harris, D.R. (Rensselaer Polytechnic Inst., Troy, NY (USA). Dept. of Nuclear Engineering). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048815.

Reference report, LA05987.

ALVIN analyzes the consistency of a set of differential and integral nuclear data, adjusts the differential nuclear data to improve agreement with integral observations, and identifies inconsistent data. ALVIN also computes required sensitivities and related quantities such as sensitivity profiles.CDC7600; FORTRAN IV; SCOPE; 55,000 (octal) words of small core memory (SCM) and 303,000 (octal) words of large core memory (LCM) are required to execute the program.

24640 **(ANL/NESC—830) HAUSER5; nuclear reaction cross sections.** Mann, F.M. (Hanford Engineering Development Lab., Richland, WA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048830.

HAUSER5 can accurately predict nuclear cross sections over most energy ranges less than about 60 MeV. A maximum of six reaction pairs can be calculated. Residual nucleii can be described by 100 discrete levels and by the constant temperature level formula and/or the Fermi-gas level description. Reference report, HEDL-TME-78-83, and NESC Note 80-04.

HAUSER5 calculates angle-integrated and, if desired, angle-differential reaction cross sections which can include capture and fission channels. Cross sections for discrete particle channels can be calculated, as well as the total for each reaction pair. Tertiary reactions can be calculated as though the reaction occurs as two sequential binary reactions. There is no restriction on the spins of the particles.UNIVAC1100/44; FORTRAN V; EXEC8; Input device (logical unit 5) to read card images, output devices for printed copy (units 6, 8, 10, and 11), and output devices for punched cards (units 7 and 9). HAUSER5, when overlayed, requires 58K words of memory. The auxiliary program, TISO, requires punch units 7 and 8 and 17K words of memory.

24641 **(DOE/ER/10407—3) Theoretical nuclear reaction and structure studies using kaons and photons. Progress report, 1 February 1982-31 January 1983.** Cotanch, S.R. (North Carolina State Univ., Raleigh (USA). Dept. of Physics). 1983. Contract AS05-79ER10407. 5p. NTIS, PC A02/MF A01. Order Number DE83008800.

Research progress and results obtained are reported on kaon photoproduction and hypernuclear excitation studies and particle radiative capture studies. (WHK)

24642 **(HMI—373) Scientific progress report 1981.** (Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.). Bereich Kern- und Strahlenphysik). 1982. 195p. (In German and English). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83780416.

Individual items from the report were prepared separately for the data base. (GHT)

24643 **(NEANDC(J)—89/U) Prediction of mass excess, β-decay energy and neutron separation energy from the atomic mass formula with empirical shell terms.** Ando, Y.; Uno, M.; Yamada, M. (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Japanese Nuclear Data Committee). Feb 1983. 147p. (INDC(JAP)—76/L; JAERI-M—83-025). Japan Atomic Energy Research Inst., Div. of Technical Information, Tokai-mura, Ibaraki-ken. Order Number DE83901996.

Recently we proposed two types of atomic mass formula (constant-shell-term formula, linear-shell-term formula). With use of these formulas, we calculate and tabulate mass excesses, neutron separation energies, and β-decay energies (β^--decay and/or electron capture) for about 5000 nuclides. The mass excess values and their errors in the 1977 atomic mass evaluation by A.H. Wapstra and K. Bos which we used in constructing our formulas, are also tabulated for reference. The constant-shell-term formula is fitted to 1468 input mass data with the standard deviation of 626 keV and the linear-shell-term formula with 394 keV.

From Nuclear and particle physics at energies up to 31 GeV: new and future aspects conference; Los Alamos, NM, USA (5 Jan 1981).

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

We have made coincidence measurements of the reaction $^{12}C(\pi^+, \pi^+ d)\ ^{10}B$ using a high resolution double-arm spectrometer system. We present angle and momentum distributions for incident energies in the range 160 to 200 MeV. We have made fits to these distributions using a plane wave two-step knock-out reaction model. We find the data is fitted best by the PWIA model with a chi^2/DF of 1.7, assuming systematic errors of 15%. The cluster, which forms the deuteron in this model, arises naturally from the overlap of the standard proton and neutron P-state shell model wave functions. With the proviso that distortions are not included in these calculations, we find no evidence for clustering within the ^{12}C nucleus, other than that which is predicted by the shell model. We have also extracted the π-d elastic differential cross-section as a function of the π-d invariant mass. It shows a peak near 2125 MeV with a width of about 50 MeV FWHM, which could be associated with the supposed $^1D_2$ B^2 (2140) dibaryon resonance. Our calculations show that this is probably a manifestation of the (3,3) resonance, and so we find no evidence to support the B^2 (2140).

From International workshop on resonances in heavy ion collisions; Bad Honnef, F.R. Germany (12 Oct 1981).

Portions are illegible in microfiche products.

It appears that the system we have studied here, $^{24}Mg(^{16}O,^{12}C)^{28}Si$ representing ^{40}Ca as the composite nucleus, is perhaps the heaviest one that exhibits strong enough resonances that quantitative measurements may be contemplated. But we have uncovered only a small corner of what is there and even within this system a huge amount of work remains. The nature of these resonances is not yet clear. The sequence may perhaps have an explanation that is schematically outlined, namely that there are several families of quasistationary states in ^{40}Ca, but that the slopes of these families do not necessarily coincide with the slope of the grazing partial waves that provide us with a narrow transparent strip of a window on the underlying structure of the nucleus. We must concentrate a lot of effort and ingenuity in order to maximize the information we gather through this window and only then may we hope to sensibly attempt forming hypotheses about the underlying simple pattern.

From High angular momentum properties of nuclei conference; Oak Ridge, TN, USA (2 Nov 1982).

M1 transition rates are strongly structure dependent and may therefore reveal the structure in a quasicontinuum of nuclear excited states. The theoretical interpretations of low-energy stretched dipole bumps are briefly reviewed. Furthermore, it is suggested that there are higher-energy M1 bumps with a signficant unstretched component, and that the related shell effects influence the cooling which feeds the yrast cascade.

From INS symposium on dynamics of nuclear collective motion; Mount Fuji, Japan (6 Jul 1982).

Microfiche only, copy does not permit paper copy reproduction.

Nuclear structure at high spin is influenced by a combination of liquid-drop and shell-structure effects. For N < 86 both contribute towards the occurrence along the yrast line of high-spin oblate aligned-particle configurations. Shell effects are mainly responsible for the prolate deformation of nuclei with N > 90. The competition between oblate and prolate driving effects leads to a prolate-to-oblate shape transition in $^{154}Dy_{88}$. The role of rotation-aligned configurations in the shape change is discussed.

Kernfysisch Versneller Inst.). *Nuclear Physics [Section] A;* **390**: No. 2, 336-350(6 Dec 1982).

Measurements of first and second moments of γ-ray multiplicity distributions from deep inelastic collisions of $^{86}Kr + ^{154}Sm$ are reported. A global systematics of the angular momentum distributions from deep inelastic reactions with projectile masses approx. >= 40 is presented. The average angular momentum is found to depend linearly on the incident channel average angular momentum, while no simple systematics for the second moment appears obvious. In order to illuminate the question whether the angular momentum transfer process reaches statistical equilibrium in deep inelastic collisions, numerical calculations have been performed on two models: a two-sphere classical model including the collective modes of twisting, bending, wriggling and tilting, and a statistical equilibrium Fermi-gas model. The two-sphere classical model is not able to account for the observed second moments, and neither does the Fermi-gas model give an explanation of the deep inelastic multiplicity data.

With 34 refs.
The mechanisms involved in the production of fast α-particles in ^{12}C-induced reactions have been studied for the $^{12}C + ^{208}Pb$ system at the bombarding energies of Esub(12sub(C)) = 132, 187 and 230 MeV. Absolute cross sections for the reactions $^{208}Pb(^{12}C, ^{12}Csup(*) \rightarrow \alpha + ^{8}Be)$, $^{208}Pb(^{12}C, ^{8}Be(g.s.))$ and $^{208}Pb(^{12}C, ^{8}Be(2.94\ MeV))$ have been determined by coincidence measurement of two or three correlated α-particles. Inclusive α-particle production cross sections were also measured at Esub(12sub(C)) = 187 MeV. It is found that the inelastic process $(^{12}C, ^{12}Csup(*) \rightarrow \alpha + ^{8}Be)$ does not contribute significantly to fast α-particle production but that the production of ^{8}Be by projectile fragmentation is an important source of α-particles. At the highest bombarding energy (230 MeV) it appears that the $^{12}C \rightarrow 3\alpha$ fragmentation reaction becomes more prominent at the expense of the $^{12}C \rightarrow \alpha + ^{8}Be$ fragmentation channel.

From 2. international conference on recent progress in many-body theories; Mexico City, Mexico (12 Jan 1981).
Portions are illegible in microfiche products.
Conventional nuclear theory is based on the rather successful model which stipulates that nuclei consist of nucleons with two-body interactions. Extensive use of pion beams as probes of nuclear structure suggests a minimal extension of this model to include pion degrees of freedom explicitly in a manner which allows production and absorption of pions without dressing isolated nucleons with a pion cloud. Some properties of such models are discussed. The parameters of the models are fitted to properties of the pion-nucleon and nucleon-nucleon systems. The nucleon is endowed with a 3/2 3/2 excited state, the Δ isobar, which can decay by pion emission. The pion-nucleon interaction consists of two-body potentials in addition to the Δ-decay interaction which provides the mechanism for pion production and absorption. There is no πNN vertex in the Hamiltonian and therefore no pion cloud attached to a single nucleon.

Contract AS05-76ER04936. 25p. NTIS, PC A02/MF A01. Order Number DE83008190.
From High angular momentum properties of nuclei conference; Oak Ridge, TN, USA (2 Nov 1982).
Nuclei which are soft with respect to the γ shape degree of freedom are expected to have many different structures coexisting in the near-yrast regime. In particular, the lowest rotational quasiparticle in a high-j shell exerts a strong polarizing effect on γ. The γ to which it drives is found to vary smoothly over a 180° range as the position of the Fermi level varies. This simple rule is seen to have a direct connection with the energy staggering of alternate spin states in rotational bands. A diagram is presented which provides a general theoretical reference for experimental tests of the relation between γ, spin staggering, configuration, and nucleon number. In a quasicontinuum spectrum, the coexistence of different

structures are expected to make several unrelated features appear within any one slice of sum energy and multiplicity. However, it is also seen that the in-band moment of inertia may be similar for many bands of different γ.

Lecture delivered on the 19th of December 1981 as part of a series entitled 'University in the town hall' organized by Mainz Univ.

The author presents a popular introduction to the formation of nuclei with special regards to superheavy nuclei. After a general description of the methods of physics the atomic hypothesis is considered. Thereafter the structure of the nucleus is discussed, and the different isotopes are considered. Then radioactivity is described as an element transmutation. Thereafter the thermonuclear reactions in the sun are considered. Then the synthesis of elements using heavy ion reactions is described. In this connection the transuranium elements and the superheavy elements are considered.

A method for projecting angular momentum in two-cluster systems with intrinsic orbital angular momentum is presented. The method is an analytical one making use of Racah algebra and exploiting tensor properties of two-cluster shell model wave functions. As an application, reduced matrix elements of spin-isospin independent scalar operators and of the electric charge multipole operator are calculated in the case where one of the clusters in the two-cluster wave function may carry an intrinsic orbital angular momentum.

24716 **(ANL/NESC—754) DEMONR; unbiased Monte Carlo slab shield code.** Courtney, J.C. (Louisiana State Univ., Baton Rouge (USA). Nuclear Science Center). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048754.

Only one shield may be used in each problem. The shield material may be a single element or a homogeneous mixture of elements with a single effective atomic weight. Only elastic scattering and neutron capture processes are allowed. The source is a point located on one face of the slab.

DEMONR treats the behavior of neutrons in a slab shield. It is frequently used as a teaching tool.IBM360/65; FORTRAN IV; HASP 3.1; A card reader, tape drives, line printer, and 60K of memory are required.

24717 **(ANL/NESC—756) TIMEX; 1-dimensional time-dependent multigroups discrete ordinates.** Hill, T.R.; Reed, W.H. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048756.

Variable dimensioning is used so that any combination of problem parameters leading to a container array less than MAXCOR can be accommodated. In addition, the CDC version permits the use of extended core storage less than MAXECS. Reference report, LA-6201-MS.

TIMEX solves the time-dependent, one-dimensional multigroup transport equation with delayed neutrons in plane, cylindrical, spherical, and two-angle plane geometries. Both regular and adjoint, inhomogeneous and homogeneous problems subject to vacuum, reflective, periodic, white, albedo or inhomogeneous boundary flux conditions are solved. General anisotropic scattering is allowed and anisotropic inhomogeneous sources are permitted.IBM360,370;CDC7600; FORTRAN IV; OS/360,370 (IBM360,370), SCOPE 2.1.3 (CDC7600); Use of a container array of 50,000 requires 500K bytes of IBM storage for execution. Five interface units may be required (use is optional), 2 system input/output units and 5 output units are required for the IBM version. Use of a container array of 16,000 and 16,000 words of ECS requires 164K total words of CDC storage for execution. Two system input/output units and 11 additional input/output files are defined in the CDC version.

24718 (ANL/NESC—758) COREL;RASE4;DAMG2; ion implantation deposition. Brice, D.K. (Sandia National Labs., Albuquerque, NM (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048758.

COREL calculates the final average projected range, standard deviation in projected range, standard deviation in locations transverse to projected range, and average range along path for energetic atomic projectiles incident on amorphous targets or crystalline targets oriented such that the projectiles are not incident along low index crystallographic axes or planes. RASE4 calculates the instantaneous average projected range, standard deviation in projected range, standard deviation in locations transverse to projected range, and average range along path for energetic atomic projectiles incident on amorphous targets or crystalline targets oriented such that the projectiles are not incident along low index crystallographic axes or planes. RASE4 also calculates the instantaneous rate at which the projectile is depositing energy into atomic processes (damage) and into electronic processes (electronic excitation), the average range of target atom recoils projected onto the direction of motion of the projectiles, and the standard deviation in the recoil projected range. DAMG2 calculates the distribution in depth of the energy deposited into atomic processes (damage), electronic processes (electronic excitation), or other energy-dependent quality produced by energetic atomic projectiles incident on amorphous targets or crystalline targets oriented such that the projectiles are not incident along low index crystallographic axes or planes.CDC6600,7600; FORTRAN IV.

24719 (ANL/NESC—823R) SPAR1; shielding with analytic ray-tracing. Wallace, O.J. (SEE CODE- 0806000 Westinghouse Electric Corp., West Mifflin, PA (USA). Bettis Atomic Power Lab.). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048823.

No more than 20 energy levels, 20 slab and 20 curved shield laminas, and one detector point can be considered in one case. Up to 250 cases can be grouped in one run. Reference reports, WAPD-TM-1196 and WAPD-TM-1197.

SPAR1 calculates exact gamma-ray fluxes from uniform sources with the shapes of slabs, disks, lines, cylinders, truncated cones, toroids, and spheres. Gamma-ray dose rates and energy absorption rates can also be obtained by including in the program input data gamma-ray buildup factors expressed in Taylor Exponential Coefficient form. Furthermore, SPAR1 will calculate fast-neutron dose rates and thermal-neutron fluxes in those cases where the use of neutron-removal cross sections is valid. In general, all three-dimensional sources having curved surfaces (cylinders, spheres, and toroids) may have both curved and slab shields intervening between the source and the detector point. Slab shields are allowed in all cases. Both slab and curved shields are assumed to be laminar. Source self-attenuation is always included in flux calculations, and multiple energy levels may be considered. Both interior and exterior detector points are allowed for cylindrical, slab, and spherical sources, and line sources may be tilted with respect to their slab shields. The detector point associated with a cylindrical volume source may be arbitrarily located, and a finite cylindrical shield may be considered. A cylindrical surface source is also available.CDC6600,7600; FORTRAN IV; SCOPE 3.1 (CDC6600); 50K central memory and one system disk (CDC6600).

24720 (ANL/NESC—984) PELSHIE2; point kernel integration shielding. Fowler, T.B.; Tobias, M.L.; Fox, J.N.; Lawler, B.E.; Koppel, J.U.; Triplett, J.R.; Lynn, L.L.; Waldman, L.A.; Goldberg, I.; Greebler, P.; Kelley, M.D.; Davis, R.A.; Keck, C.E.; Redfield, J.A.; Murphy,; Thompson, J.I. (Atomic Energy Board, Pelindaba, Pretoria (South Africa)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048984.

Maxima of - 225 subregions per source 80 different photon energies per source 18 energy groups 10 different shielding regions Only photons with an energy greater than 100 keV can be handled by the program. Build-up below 250 keV is ignored.

PELSHIE2 calculates dose rates from gamma-emitting sources with different source geometries and shielding configurations. Eight source geometries are provided and are called by means of geometry index numbers. Gamma-emmission characteristics of 133 isotopes, attenuation coefficients for 57 elements and other shielding materials, and Berger build-up parameters for 17 shielding materials can be obtained from two associated direct-access libraries. For extended sources, constant source strengths, as well as exponential and cosine or Bessel functions source strength distributions, are allowed in most cases.IBM360,303x; FORTRAN IV (99%) and BAL (1%); OS/MVT, OS/MVS; 140K and 60K bytes of memory are required by PELSHIE2 and the auxiliary program, respectively. Two direct-access devices (units 2 and 3) are used by both programs..

24721 (CONF-820274—3) Positron-annihilation characteristics in real solids including many-body enhancement effects. Chakraborty, B. (Argonne National Lab., IL (USA)). Jun 1982. Contract W-31-109-ENG-38. 13p. NTIS, PC A02/MF A01. Order Number DE83007627.

From 2. national symposium on positron annihilation; Madras, India (8 Feb 1982).

Portions are illegible in microfiche products.

A density functional scheme has been developed for incorporating electron-positron correlation effects into band-structure calculations of positron-annihilation characteristics. The electron and positron densities are determined from a self-consistent set of equations based on a generalized Kohn-Sham scheme. Application of this formalism to defect-free aluminum is described. The results for a two-dimensional angular-correlation spectrum and the positron lifetime show very good agreement with experiment. The method is of general applicability and can be used with any existing self-consistent band-structure scheme.

24722 (CONF-820397—2) Linear transport theory and an indefinite Sturm-Liouville problem. Kaper, H.G.; Lekkerkerker, C.G.; Zettl, A. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 45p. NTIS, PC A03/MF A01. Order Number DE83008552.

From Conference on differential equations - lecture notes in mathematics; Dundee, UK (29 Mar 1982).

Linear-transport processes occur whenever particles move in a host medium, carrying mass, momentum, and energy from one point of the medium to another. Mathematical models of such transport processes involve two operators, one accounting for free streaming of the particles, the other for interactions between the particles and the atoms or molecules of the surrounding host medium. We investigate a time-independent electron-transport problem, where the free-streaming operator is the multiplicative coordinate operator in $L^2(-1,1)$ and the interaction operator is the Legendre differential operator.

24723 (DOE/ER/70064—T1) Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981. Pantell, R.H. (Stanford Univ., CA (USA). School of Engineering). 16 Mar 1982. Contract AT03-76ER70064. 22p. NTIS, PC A02/MF A01. Order Number DE82020511.

Portions are illegible in microfiche products.

Theoretical and experimental studies have been performed on the radiation emitted by electrons and positrons channeled by planes and axes in crystals. The theoretical work consisted primarily of the determination of the properties of the radiation (photon energy, linewidth, direction, polarization and intensity) using appropriate crystal potential functions in the relativistic wave equation. Excellent agreement between theory and experiment was achieved using a many-beam analysis based upon theHartree-Fock model of the atom. Experimental work was done with the linear accelerator at the Lawrence Livermore National Laboratory. Electrons and positrons were channeled in both silicon, germanium, and diamond crystals (most of the effort was with Si) at energies of 28 and 54 to 56 MeV. The crystal was mounted on a three-axis gomiometer with 60 μrad resolution. With the particle beam deflected by a dump magnet, forward directed x-ray radiation was observed with a Ge:Li detector. This research has demonstrated that it is possible to study both crystal properties and the channeling phenomenon by

means of channeling radiation. In addition, an interestig new source of hard x-rays has been produced that is well collimated, linearly polarized, of picosecond duration, relatively narrow bandwidth, and tuneable.

24724 **(IKE—6-138) Re-evaluation of the neutron scattering dynamics in heavy water, generation of multigroup cross sections for THERM-126.** Keinert, J. (Stuttgart Univ. (Germany, F.R.). Inst. fuer Kernenergetik und Energiesysteme). Jun 1982. 33p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83750127.

In providing THERM-126 with cross section matrices for deuterium bound in heavy water the IKE phonon spectrum was reevaluated. The changes are modifications in the acoustic part and in the frequency of the second oscillator. Contrary to the phonon spectrum model for D in D_2O in ENDF/B-IV the broad band of hindered rotations is assumed to be temperature dependent taking into account the diffusive motion of the molecule. With the new model scattering law data S (α, β) are generated in the temperature range 293.6 K-673.6 K. The THERM-126 scattering cross section matrices are calculated up to P_3. As a validity check a lot of differential and integral cross sections are compared to experiments and benchmarks are recalculated.

24725 **(Juel—1774) Installation of a positron annihilation apparatus for the investigation of Fermi surfaces.** Fischer, H.P. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Festkoerperforschung). Mar 1982. 104p. (In German). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83750142.

Dissertation submitted to Goettingen Univ., Germany, F.R.

An experimental apparatus to investigate the Fermi surfaces of binary alloys with positron annihilation is described. The principle of rotating specimen with the angular correlation at constant deviation angle is applied combined with a new crossed slit geometry using collimators which are grooves engraved in steel plates. The resolution is vertical 0.88 mrad and horizontal 1.6 mrad. The apparatus is fourfold to measure simultaneously four crystal directions at 5° difference (multi-collimator geometry). In a given crystal plane the range of crystal directions covers 100°. A range attenuation to measure the necks of the Fermi surface with greater accuracy is provided. The use of external Cu-64 positron sources allows investigations of all alloy systems. A test measurement on pure copper single crystals is reported and proves the performance of the apparatus.

24726 **(LA—9610-MS) Multiple-scattering analysis of laser-beam propagation in the atmosphere and through obscurants.** Zardecki, A.; Gerstl, S.A.W. (Los Alamos National Lab., NM (USA)). Jan 1983. Contract W-7405-ENG-36. 75p. NTIS, PC A04/MF A01. Order Number DE83008274.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

The general purpose, discrete-ordinates transport code TWOTRAN is applied to describe the propagation and multiple scattering of a laser beam in a nonhomogeneous aerosol medium. For the medium composed of smoke, haze, and a rain cloud, the problem of the target detectability in a realistic atmospheric scenario is addressed and solved. The signals reflected from the target vs the signals scattered from the smoke cloud are analyzed as a function of the smoke concentration. By calculating the average intensity and a correction factor in the x-y and r-z geometries, the consistency of the rectangular and cylindrical geometry models is assessed. Received power for a detector with a small field of view is computed on a sphere of 1-km radius around the laser source for the Air Force Geophysics Laboratory rural aerosol model with extinction coefficients of 4 km^{-1} and 10 km^{-1}. This computation allows us to study the received power as a function of the angle between the detector and source axes. The correction factor describing the multiple-scattering enhancement with respect to the simple Lambert-Beer law is introduced, and its calculation is employed to validate the use of the small-angle approximation for the transmissometer configuration. An outline of the theory for a finite field of view detector is followed by numerical results pertaining to the received power and intensity for various aerosol models. Recommendations regarding future work are also formulated.

24727 **(LA-UR—82-3299) Some analysis techniques and results of the Monte-Carlo simulation of proton and electron tracks.** Brenner, D.J.; Zaider, M. (Los Alamos National Lab., NM (USA); Columbia Univ., New York (USA). Radiological Research Lab.). 1982. Contract W-7405-ENG-36. 9p. (CONF-820998—3). NTIS, PC A02/MF A01. Order Number DE83003571.

From Workshop on the interface between radiation physics and radiation chemistry; Argonne, IL, USA (9 Sep 1982).

In response to the need for detailed data on energy deposition in micron and sub-micron sites, the code PROTON has been developed to transport protons and electrons on an event-by-event basis in water vapor. The electrons are currently transported down to sub-electron-volt energies, making the results a suitable starting point for radiation chemistry studies. This report describes the details of some techniques we use to analyze the large amount of data produced by the code. In particular, we shall be concerned here with lineal energy distributions (lineal energy, y, is the energy deposited in a specified volume by a passing particle and its secondaries, divided by the mean path length through that volume). The fact that lineal energy spectra can be measured using microdosimetric techniques offers a useful opportunity for comparing Monte-Carlo-based predictions with experimental data.

24728 **(PB—83-143818) Measurements of inelastic scattering of eV neutrons. Final report.** Bowman, C.D.; Johnson, R.G. (National Bureau of Standards, Washington, DC (USA)). 1982. 3p. National Bureau of Standards, Washington, DC.

From Proceedings IPNS symposium on nuetron scattering; Argonne, IL (August 12-14, 1981).

A technique has been demonstrated for studying the inelastic scattering of eV neutrons using a pulsed white source. Measurements have been completed on benzene for incident energies in the range 1.5 to 15 eV and for q values from 13 to 120/A. Details of the method and possibilities for improvement and extension are presented.

24729 **(SAND—82-1821) Electron-channeling radiation: x-ray source feasibility study.** Sanford, T.W.L.; Beezhold, W.; Lee, J.R. (Sandia National Labs., Albuquerque, NM (USA)). Jan 1983. Contract AC04-76DP00789. 47p. NTIS, PC A03/MF A01. Order Number DE83009179.

Properties of recently observed channeling radiation generated by electrons incident on crystalline axes, and in this case, electrons from a hypothetical 15-40-MeV high-current electron accelerator, are investigated in order to explore the feasibility of using channeling radiation as an intense 10- to 100-keV x-ray source for laboratory weapons effects studies. Under the assumption that the crystal remains intact long enough for the radiation to form and under the conditions of small beams divergence, high-energy electrons indeed generate channeling radiation in the above energy range. Because the low-energy channeling radiation is forward directed with a half angle inversely proportional to the electron energy, channeling radiation generated by focusing curved crystals could have application for those situations in which very high doses ($>$ 10 cal/gm(Au)) are desired over very small areas ($<$ .1 cm^2). However, because of very-low channeling lengths, calculations indicate that the dose-area product produced by an optimized-channeling radiation source is typically two orders-of-magnitude lower than that obtainable from a 1 MeV simulator like SPEED for equivalent total e-beam energy. Therefore, we conclude that unless channeling lengths can be increased and injection efficiency improved, an electron-channeling radiation source does not, for most laboratory nuclear-weapon-effects x-ray testing needs, offer cost-effective competition as compared to 1-2-MV bremsstrahlung sources.

24730 **Incoherent quasielastic neutron scattering from water in supercooled regime.** Chen, S.; Teixeira, J.; Nicklow, R. (Nuclear Engineering Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review [Section] A: General Physics;* **26**: No. 6, 3477-3482(Dec 1982). Contract W-7405-ENG-26.

Measurements of the quasielastic spectra have been made with a three-axis neutron spectrometer at constant-Q mode in a temperature range from 38°C down to -20 °C. Two energy resolutions both high ($\Delta E = 100\ \mu$ eV) and low ($\Delta E = 800\ \mu$ eV) were used to identify and separate a sharp component from a broad one. As temperature is decreased below zero the spectrum shows an increasing sharp component standing out on top of the broad one. The broad component is attributed to rotational motions of water molecules. A preliminary analysis of the linewidths gives a Q-independent relaxation time which has the same magnitude as the rotational relaxation time measured by nuclear magnetic resonance. The Q dependence of the sharp line is analyzed by a Q-dependent diffusion coefficient. A temperature-independent characteristic length $l_0 = 0.5$ A is obtained. We then attempt to relate this length to local geometry of protons associated with hydrogen bonding.

24731 **Coherent absorption and emission processes of energetic particles penetrating crystals.** Datz, S. (Oak Ridge National Lab., TN). pp 179-188 of Inner-shell and x-ray physics of atoms and solids. Fabian, D.J.; Kleinpoppen, H. (eds.). New York, NY; Plenum Publishing Corporation (1981). Contract W-7405-ENG-26.

Channeled, highly stripped ions of sufficiently high atomic number $Z_1 \geqq 5$ can exist in a crystal in well defined quantum states and transitions between quantum states can be affected when resonant frequencies, dependent on crystal direction and velocity, are achieved. Studies of resonant coherent excitation of channeled ions constitute a form of absorption spectroscopy which yields information on the ionic states and the crystalline millieu. Experimental observation of both the absorption and emission phenomena in channeling has occurred only in the past two years and a brief review and collation of the various effects observed will be presented in this paper.

24732 **National Center for Small-Angle Scattering Research.** Koehler, W.C.; Hendricks, R.W.; Child, H.R.; King, S.P.; Lin, J.S.; Wignall, G.D. (Oak Ridge National Lab., TN). pp 75-85 of Scattering techniques applied to supramolecular and nonequilibrium systems. Chen, S.H.; Chu, B.; Nossal, R. (eds.). New York, NY; Plenum Publishing Corporation (1981). Contract W-7405-ENG-26.

The National Center for Small-Angle Scattering Research (NCSASR) is a national user-oriented facility dedicated to studying the structure of matter on the scale of tens to hundreds of angstrome (10^{-8} cm). The center, sponsored by the National Science Foundation (NSF) through an interagency agreement with the Department of Energy (DOE), was established at the Oak Ridge National Laboratory (ORNL) in 1978. It makes state-of-the-art equipment for neutron and x-ray small-angle scattering experiments available to qualified investigators from university, industrial, and other government laboratories. A description of the available instruments is given.

In In vivo measurements of bone-seeking radionuclides. Progress report, 1981-1982.

The accurate calibration of dual energy NaI-CsI (Tl) detectors for the in vivo measurement of uranium and transuranic nuclides deposited in the lungs and liver has been aided by the recent development of an accurate phantom by the Lawrence Livermore National Laboratory (LLNL). The thorax phantom is the most realistic human analog produced to date and provides for calibration of these nuclides over the normal range of chest wall thicknesses (CWT) and tissue composition. This paper presents an interlaboratory calibration study using this structure, and calibration curves as a function of CWT. (KRM)

In In vivo measurements of bone-seeking radionuclides. Progress report, 1981-1982.

Evaluation of internally-deposited, photon-emitting radionuclides by external in vivo scintillation measurements requires a method to calibrate the radiation detectors in order to convert counts measured by the detection system into an amount of activity deposited in the organ or tissue of interest. The most practical calibration techniques for in vivo measurement procedures involve construction and measurement of human surrogate structures in which known amounts of activity are inserted in artificial tissues and/or organs to simulate the expected distribution. In this paper, in vivo measurements with the NYU Am-241 skull phantoms and the skull from a skeleton with an incorporated Am-241 burden, derived from accidental inhalation exposure, demonstrates the validity of well-designed surrogate structures as a primary calibration mechanism. (KRM)

24736 (DOE/EV/04326—4, pp 61-76) **Estimation of the cumulative exposure to uranium mine atmospheres by in vivo measurements of lead-210 in the skull.** 1982. NTIS, PC A06/MF A01. Order Number DE83006975.

In In vivo measurements of bone-seeking radionuclides. Progress report, 1981-1982.

A reference library consisting of the measured spectral response of the NaI-CsI(T1) detector to point source spectra for 20 low-energy emitting nuclides has been established and its use is the topic of the appendix to this progress report. In addition to the point source geometry, spectra which are representative of in vivo thoracic measurements have been added. (KRM)

24738 **(GSF-S—859) Secondary electron spectra in the trace of fast ions travelling through water vapor.** Kollerbaur, J. (Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz). Feb 1982. 66p. (In German). NTIS (US Sales Only), PC A04/MF A01. Order Number DE83750307.

Results are presented giving insight in the radial electron- and energy transport mechanisms (LET) in the trace of fast ions (1 MeV protons). With increasing radius the electron energy distribution is shifted to higher-energies. In the most important energy region the results are in agreement with Monte-Carlo-calculations, thus such calculations are of great importance for a complete analysis of the trace structure.

24739 **(CONF-8206162—1) Initiation and development of deformation heterogeneities in superplastic materials.** Kocks, U.F. (Argonne National Lab., IL (USA)). Feb 1982. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01. Order Number DE83007676.

From AIME symposium on superplastic forming of structural alloys; San Diego, CA, USA (20 Jun 1982).

Portions are illegible in microfiche products.

Deviations from steady-state deformation are important in a consideration of superplasticity, for two reasons. First, true steady state is not actually attained in most cases, especially in tension. Second, since steady state is generally caused by a statistical, dynamic balance between hardening and softening processes, local chance deviations should be expected, for example in the strain rate. An important material property is the degree of stability of the steady state, i.e., the rapidity with which fluctuations decay. Any temporary local deviation in strain rate produces integrated differences in strain; this process is identified as the initiation of the deformation heterogeneities, whose further development has been described before. There are two material parameters that influence the localization behavior: one is related to (though not always equal to) the rate sensitivity of steady state, the other to the rate sensitivity of primary-creep decay or of work hardening. A quantitative description of the phenomenology is given, as well as prescriptions for the experimental measurement, and possibly the control, of these material parameters.

24740 (HMI—373, pp 137) **Local 4f moment studies by TDPAD.** Barth, H.J.; Luszik-Bhadra, M.; Netz, G.; Riegel, D. 1982. (In German, English). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83780416.

24741 **(LBL—13220) Spin waves at surfaces and steps in ferromagnets and antiferromagnets.** Falicov, L.M. (Lawrence Berkeley Lab., CA (USA)). Aug 1981. Contract W-7405-ENG-48. 13p. (CONF-810866—2). NTIS, PC A02/MF A01. Order Number DE82000277.

From NATO advanced study institute on excitations in disordered systems; E Lansing, MI, USA (23 Aug 1981).

The study of the properties of elementary magnetic excitations - spin waves or magnons - in the neighborhood of surfaces, discontinuities, defects, and impurities is an active field of solid-state magnetism. These modes are of interest for understanding relaxation phenomena as well as chemical reactions catalyzed by magnetic substrates. In this contribution we would like to report two different results: (1) some spectra of the spin-wave modes associated with clean and stepped surfaces of a ferromagnet - the clean and a stepped (001) surface of a face-centered-cubic solid; and (2) the unusual and yet unresolved difficulties encountered when similar procedures are attempted on antiferromagnetic surfaces and steps.

24742 **Monte Carlo simulation of diffusion of gases in a porous solid: Calculations for a new class of solids.** Nakano, Y.; Evans, J.W. (Department of Materials Science and Mineral Engineering, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **78**: No. 5, 2568-2572(1 Mar 1983).

In a previous paper, a Monte Carlo simulation of the Knudsen diffusion of a gas in a porous solid was carried out. The simulated porous solid had pore walls that were convex. In the present paper, the simulation is repeated using simulated solids whose pore walls are concave. It was found that the results of both studies could be correlated by a single equation. This equation enables the prediction of the Knudsen diffusiveness from the porosity and mean pore size without resort to a tortuosity factor.

24743 **Charge transfer and the effective Coulomb interaction at metal surfaces.** Watson, R.E.; Davenport, J.W.; Perlman, M.L. (Departments of Physics and Chemistry, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review [Section] B: Condensed Matter;* **26**: No. 12, 6476-6479(15 Dec 1982).

The change in electrostatic potential due to charge transfer on or off a crystal surface is estimated for a number of fcc, bcc, and hcp surfaces and the results are compared with the observed surface-to-bulk core-photoelectron binding-energy shifts. The effective Coulomb interaction associated with such charge transfer can be larger than the intra-atomic interaction term alone and hence larger than the bandwidth for typical transition metals. Some implications for chemisorption and layered structures are noted.

24744 **Chemisorption of oxygen on Cu(110) studied by eels and leed.** Wendelken, J.F. (Oak Ridge National Lab., TN). *Surface Science;* **108**: 605-616(1981). Contract W-7405-ENG-26.

The chemisorption of oxygen on Cu(110) has been studied with electron energy loss vibrational spectroscopy and low energy electron diffraction. Depending on crystal temperatures during oxygen exposure and subsequent heat treatments, (1 x 1), c(6 x 2), and (2 x 1) LEED patterns are obtained. However, in all cases and independent of exposure, a single vibrational energy was observed at 49 meV for ^{16}O and at 46 meV for ^{18}O. This invariance of energy suggests a shielded site location in or beneath the surface in support of the result of a recent ion scattering study. The (2 x 1) structure is shown to form in islands at less than saturation coverage on the basis of observed vibrational intensities.

24746 **Kapitza thermal boundary resistance between two solids.** Anderson, A.C. (Univ. of Illinois, Urbana). pp 1-30 of Nonequilibrium superconductivity, phonons, and Kapitza boundaries. Gray, K.E. (ed.). New York, NY; Plenum Publishing Corporation (1981). Contract AC02-76ER01198.

While investigating the transport of heat in superfluid ^4He, Kapitza (1941) observed a large temperature difference ΔT between his copper heater and the liquid helium. He deduced that the entire Δ occurred very close to the copper-helium interface. It is permissible therefore to define a thermal boundary resistance R/sub K identical with $\Delta T/Q$, where Q is the heat flux per unit area of interface. R/sub K/, now called the Kapitza resistance, has been shown to have a temperature dependence of $\approx T^{-3}$. Initially it was suggested that R/sub K/ was related to the superfluid character of liquid ^4He at temperatures below 2°K. However, by 1960 it was apparent that a Kapitza resistance also occurs between two solid materials, and that this phenomenon should be related to the reflection and refraction of thermal phonons at the interface. A theory based on the scattering of phonons at the interface has become known as the acoustic-mismatch model (Little, 1959). This theory successfully accounts for R/sub K/ between most solids, but explains only a few of the details in the Kapitza resistance to liquid helium. The present paper discusses the solid-solid boundary resistance.

24747 (ANL/NESC—987) L2RMAT; coupled channel inelastic scattering. Walker, R.B.; Schneider, B.I. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048987.

The S-matrix analysis assumes there are no coulomb interactions.

L2RMAT solves the coupled, second-order differential equations of quantum inelastic scattering theory. The physical problem is defined by user-supplied subroutines, POT and LIST.CDC7600,CYBER175; FORTRAN IV; SCOPE 2.1 (CDC7600), NOS 1.4 (CDC CYBER175); 166,000 (octal) words of memory are required to execute the sample problem..

24748 (BONN-HE—82-14) Particle-two particle interaction in configuration space. Kuzmichev, V.E. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Jul 1982. 17p. NTIS (US Sales Only), PC A02 MF/A01. Order Number DE83750136.

The problem if three indentical particles with zero-range two-particle interaction is considered. An explicit expression for the effective potential between one particle and the remaining two-particle system is obtained in the coordinate representation. It is shown that for arbitrary energies, at small and, for zero energy, at large distances rho between the one particle and centre of mass of the other two particles the diagonal matrix element of the effective potential is attractive and proportional to $1/rho^2$. This property of the effective potenial explains both the Thomas singularity and the Efimov effect. In the case of zero total energy of the system the general form of the solution of the three-particle integral equation is found in configuration space.

24749 (BONN-HE—82-15) Test of three-body separable pole expansions at negative and positive energies. Cravo, E.; Fonseca, A.C.; Haberzettl, H. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Jul 1982. 30p. NTIS (US Sales Only), PC A03/MF A01. Order Number DE83750140.

We compare the performance of separable pole expansions for the three-body amplitude in reproducing three-body data at both negative and positive energies. In addition to the Generalized Unitary Pole Expansion and the Energy Dependent Pole Expansion, we present results for two new expansions. As benchmarks for our calculations, we use the three-boson results of Aaron, Amado, and Yam. At positive energies, we calculate phase shifts and inelasticities. At negative energies, we give off-shell scattering amplitudes and investigate how well the expansions are capable of generating the second bound state of the three-boson problem, if the first is put explicitly into the expansions. In general, we find that the results get better the more energy dependence is explicitly contained in the expansion functions. The relevance of these findings for four-body calculations, which employ separable three-body input, is discussed briefly.

24750 (NP—2903373) Electron flow generation of energy in a field of two transverse electromagnetic type waves. Preprint 218. Zhurakhovskii, V.A.; Kulish, V.V.; Chemeris, V.T. (AN Ukrainskoj SSR, Kiev. Inst. Ehlektrodinamiki). 1980. 43p. Inst. of Electrodynamics, Kiev, USSR. Order Number DE82903373.

A formulation is made of a working algorithm for the use of a second approximation by the averaging method in solving differential equations for slowly changing variables at purely periodic right-hand sectors within the limits of an extended time interval and length. This algorithm is used to construct a system of smoothed out equations for electron efficiency and the electromechanical phase. Conditions for intensive energy exchange are identified. The electron efficiency at a single-section interaction was shown not to exceed 10% because of particle resonance and wave disruption during electron inhibition. That efficiency was shown to increase up to 30% at a two-sectional interaction during which a preliminary grouping of the flow takes place, and an electrostatic field occurs in the selection zone to compensate for the electron energy loss. 18 references, 4 figures.

24751 Enskog theory for multicomponent mixtures. I. Linear transport theory. Lopez de Haro, M.; Cohen, E.G.D.; Kincaid, J.M. (The Rockefeller University, New York, New York 10021). *Journal of Chemical Physics;* **78**: No. 5, 2746-2759(1 Mar 1983).

The Enskog theory for dense multicomponent fluid mixtures is developed. Two versions are considered: the standard theory and the revised theory. Explicit expressions for all the transport coefficients (shear and bulk viscosity, thermal conductivity, mutual and thermal diffusion coefficients) in terms of the sizes, masses, and concentrations of the constituents of the mixture are given in the third Enskog approximation. Applications will be discussed in subsequent papers.

24752 Comment on: On the Chapman—Enskog solution method for mixtures [B. C. Eu, J. Chem. Phys. 74, 6373 (1981)]. Karkheck, J.; Kincaid, J.M.; Stell, G. (Department of Science and Mathematics, GMI Engineering and Management Institute, Flint, Michigan 48502). *Journal of Chemical Physics;* **78**: No. 5, 2807-2809(1 Mar 1983).

A recent criticism by Eu of the Chapman—Enskog method of solution for the mixture set of Boltzmann equations is reexamined. His proposed alternative is shown to be based upon a set of linear equations that in general has no solution. The new approach proposed by Eu is appropriately corrected and shown to be less general than the Chapman—Enskog method and contained within the latter as a special case.

24753 Acoustic scattering by elastic solid cylinders and spheres in viscous fluids. Lin, W.H.; Raptis, A.C. (Components Technology Division, Argonne National Laboratory, Argonne, Illinois 60439). *Journal of the Acoustical Society of America;* **73**: No. 3, 736-748(Mar 1983).

This paper deals with analytic studies and numerical results of the scattering of plane sound waves from an elastic circular cylinder and from an elastic sphere in a viscous fluid. The elastic properties of the cylinder and the sphere and the viscosity of the surrounding fluid are taken into account in the solution of the acoustic-scattering problems. The associated acoustic quantities, such as the acoustic-scattering patterns, the acoustic-radiation forces, and the acoustic attenuation, are first derived in closed forms and then evaluated numerically for a given set of material properties. Numerical results show that increasing fluid viscosity tends to increase the directionality of the angular distribution of the scattering patterns, especially in the forward direction. The acoustic-radiation force on the cylinder or on the sphere is in the direction of the incident wave and increases as the viscosity of the fluid increases. The plots of the acoustic-attenuation coefficients versus the dimensionless wavenumber of the incident sound wave reveal oscillatory phenomena, which are caused by the resonant vibrations of the cylinder or the sphere.

24754 Predissociation in an intense electromagnetic field. Lami, A.; Rahman, N.K. (Istituto di Chimica Quantistica ed Energetica Molecolare, Via Risorgimento, 35-56100 Pisa, Italy). *Physical Review [Section] A: General Physics;* **26**: No. 6, 3360-3368(Dec 1982).

The problem of predissociation in a strong electromagnetic field is investigated in the context of a double-resonance scenario. A nonperturbative approach is followed. Numerical examples are given to show how the line shape is modified. The results are also discussed in connection with the possibility of a photocatalytic effect.

24755 Breather annihilation by simple dissipation. McLaughlin, D.W.; Overman, E.A. II. (Department of Math and Progress in Applied Mathematics, University of Arizona, Tucson, Arizona 85704). *Physical Review [Section] A: General Physics;* **26**: No. 6, 3497-3507(Dec 1982).

A numerical experiment is conducted on the decay of a sine-Gordon breather under simple dissipation. Both the spatial configuration and the (nonlinear) spectral configurations are measured nu-

merically. The spectral configuration establishes that the breather is annihilated in finite time and that the annihilation process is accomplished by the generation of a long-wavelength packet of dispersive radiation. The nonlinear radiation density, which is measured numerically, is seen to be order 1 and is extremely well approximated by a sech profile in k space. Finally, a representation of the spectral configuration by "resonance" states is investigated.

24758 **Hard-core square-well fermions.** Baker, G.A. Jr.; Benofy, L.P.; Fortes, M.; de Llano, M.; Peltier, S.M.; Plastino, A. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] A: General Physics;* 26: No. 6, 3575-3588(Dec 1982).

Based on the well-known low-density expansion for the ground-state energy per particle of a many-fermion system interacting pairwise via a central potential we develop a perturbation scheme in which the zero-order state is that of the purely-repulsive-spheres fluid. For the hard-core plus square-well pair-interaction case we have deduced, for two-species fermion matter, perturbation formulas up to sixth order in the attractive coupling parameter. We explicitly report results up to fourth order here. Pade-approximant analyses in the density are carried out in each order with the intent of providing the basis necessary for extensive equation-of-state calculations of various many-fermion systems. In particular, for zero order (the fermion hard-sphere fluid) we predict an uncertainty-principle divergence in the energy, and hence pressure, corresponding to the random close packing of spheres, at a density of about 0.5 times the recently obtained value for boson hard spheres and about 0.2 times the well-known empirical value for classical hard spheres.

24757 **Focus waves modes in homogeneous Maxwell's equations: Transverse electric mode.** Brittingham, J.N. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Journal of Applied Physics;* 54: No. 3, 1179-1189(Mar 1983).

This paper presents mathematical formulations for new, three-dimensional, packet-like solutions to the free-space homogeneous Maxwell's equations. These solutions are real, nonsingular, continuous functions which propagate in a straight line at light velocity. They remain focused for all time. The asymptotic behavior of the fields away from the moving pulse center has a magnitude which decreases as the inverse of the distance from the pulse centers.

The form of the slowing-down distribution neglects absorption and leakage of plasma particles during the slowing-down process and is based on the assumption that the slowing-down ion is faster than the background ions but slower than the plasma electrons. Reference report, LA-6344-MS.

STEEP4 calculates fusion reaction rates in terms of the specific reactivity (sigma-v) which is the product of cross section and relative velocity averaged over the actual ion distributions of the interacting particles in the plasma. Maxwellian ion distributions are modified to include slowing-down contributions which are characterized in terms of plasma parameters. Rapid and accurate algorithms are used for integrating the specific reactivity from spectra and input cross sections. Options are also provided for rapid calculation of screening effects on specific reaction rates.CDC6600,7600; FORTRAN IV; SCOPE 2.1.3; A SC4020 Film Unit is used to provide film plotting capability.

24759 **(CONF-821045—3) Sputter-induced erosion of alkali metal surfaces - AES, XPS and SIMS studies.** Krauss, A.R. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 16p. NTIS, PC A02/MF A01. Order Number DE83007720.

From Symposium on effective utilization of surface analysis techniques in plasma surface interactions; Sapporo, Japan (4 Oct 1982).

Portions are illegible in microfiche products.

This paper will discuss the manner in which the techniques of Auger-electron spectroscopy (AES), X-ray-photoelectron spectroscopy (XPS), secondary-ion mass spectroscopy (SIMS) and ion-scattering spectroscopy (ISS) may be used to study the use of high secondary-ion-yield surfaces as a means of reducing plasma-impurity influx in magnetic-confinement fusion devices.

24760 **(DOE/ER/10613—2) Superfast Z-pinch-produced plasmas.** Hsing, W.W. (Columbia Univ., New York (USA). Plasma Physics Lab.). 1983. Contract AC02-80ER10613. 117p. NTIS, PC A06/MF A01. Order Number DE83009278.

Thesis.

The superfast z-pinch has been investigated as a possible means of producing an ultra-high (~ 100 keV) temperature plasma. An ion Vlasov fluid electron code is shown to simulate the experimental behavior of a pinch. Dependence of the temperature on wall generated impurity, initial density profile, and generator parameters are indicated. Extrapolation of the code using state of the art pulse generators indicate feasibility of an ultra-high temperature plasma.

24761 **(DOE/ET/53051—49) Plasma potential in a magnetic mirror with electron-cyclotron-resonance heating.** Smith, P.K. (Wisconsin Univ., Madison (USA)). Jan 1983. Contract AC02-76ET53051. 167p. NTIS, PC A08/MF A01. Order Number DE83009355.

Portions are illegible in microfiche products. Original copy available until stock is exhausted; Thesis.

Experimental and theoretical studies of the ECRH plasma in the University of Wisconsin DE Machine magnetic mirror have been undertaken. Typical plasma parameters in these experiments were T/sub e/ - 10 to 30 eV, T/sub i/ - 4 eV, V/sub po/ (plasma potential at midplane) ~ 20 to 50 V, midplane plasma density n_0 - 10^{16} m^{-3}, B_0 (magnetic field strength on axis at midplane) - .005 to .01 T, mirror ratio R - 5 to 20. The principal experimental findings were the appearance of strong density peaks (~ 2 x background) and notable V/sub f/ dips (~ kT/sub e//e) in a narrow (~ 1 cm) region near the axial positions of cyclotron resonance. The properties of these dips do not change greatly over the range of operating parameters, but are narrower at higher pressures.

24762 **(DOE/ET/53088—84) Kinetic theory of Alfven waves.** Mahajan, S.M. (Texas Univ., Austin (USA)). Mar 1983. Contract FG05-80ET53088. 50p. (IFSR—84). NTIS, PC A03/MF A01. Order Number DE83009162.

The addition of electron parallel dynamics in the description of an inhomogeneous current carrying cylindrical plasma is shown to replace the magnetohydrodynamic continuum, associated with Alven waves, by a discrete spectrum. The spectrum of the resulting discrete modes is determined analytically and numerically.

24763 **(GA-A—16853) Laser-fluorescence measurements of hydrogen and metal densities in the Doublet III tokamak.** Muller, C.H. III; Eames, D.R.; Burrell, K.H. (GA Technologies, Inc., San Diego, CA (USA)). Jan 1983. Contract AT03-76ET51011. 23p. (CONF-821111—23). NTIS, PC A02/MF A01. Order Number DE83008499.

From 29. national symposium on American Vacuum Society; Baltimore, MD, USA (16 Nov 1982).

A general overview of the Doublet III laser-spectroscopy program is presented. This program includes tokamak diagnostic experiments and laboratory development work. Measurements of titanium and deuterium in Doublet III are presented along with recent laboratory results. Sputtering of the vacuum walls by ener-

getic charge-exchange neutrals from the plasma center appears to be responsible for the observed Ti impurities in Doublet III. Resonance-fluorescence scattering from deuterium atoms near the plasma center has been observed using a broadband dye laser and a narrow-band detector. The feasibility of determining ion temperatures using this technique is discussed. Using the measured deuterium densities we have calculated a local-electron particle-confinement time. Laboratory measurements of carbon and oxygen densities using two-photon laser excitation and of FeI speed distributions (temperatures) using a laser double-pulse excitation technique are shown to be applicable to the tokamak conditions of Doublet III.

24764 **(LA-UR—83-291) Some nonlinear estimates for lateral propagation of self-generated B fields.** Goldman, S.R. (Los Alamos National Lab., NM (USA)). 1982. Contract W-7405-ENG-36. 10p. (CONF-8209113—1). NTIS, PC A02/MF A01. Order Number DE83007576.

From CECAM workshop; Paris, France (13 Sep 1982).

We present nonlinear estimates which provide plausible guidelines and scalings for the lateral transport of magnetic fields due to laser-plasma interaction in both slab and cylindrical geometries. Limitations of the modelling are also indicated.

24765 **(PPPL—1772) Operating tokamaks with steady-state toroidal current.** Fisch, N.J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Apr 1981. Contract AC02-76CH03073. 7p. NTIS, PC A02/MF A01. Order Number DE83009152.

Continuous operation of a tokamak requires, among other things, a means of continuously providing the toroidal current. Various methods have been proposed to provide this current including methods which utilize radio-frequency waves in any of several frequency regimes. Here we elaborate on the prospects of incorporating these current-drive techniques in tokamak reactors, concentrating on the theoretical minimization of the power requirements.

24766 **(PPPL—1977) Lower hybrid heating and current drive on PLT.** Stevens, J.E.; Bernabei, S.; Bitter, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 32p. (CONF-820345—17). NTIS, PC A03/MF A01. Order Number DE83008981.

From Symposium on heating in toroidal plasmas; Grenoble, France (22 Mar 1982).

800 MHz lower hybrid waves have been launched into PLT with a six waveguide coupler. Recent improvements have allowed powers up to 400 kW to be launched with good coupling (R ~ 10 to 25%). Experiments at low density (anti n/sub e/ < 7 x 10^{12} cm^{-3}, i.e., ω/ω/sub LH/ > 2) have demonstrated current drive and plasma heating. Experiments at higher densities have produced hot-ion tails, but so far have shown inefficient body heating. To date, only a limited parameters space has been investigated at high power.

24767 **(PPPL—1980) Ray-tracing study of electron-cyclotron heating in toroidal geometry.** Kritz, A.H.; Hsuan, H.; Goldfinger, R.C.; Batchelor, D.B. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 40p. NTIS, PC A03/MF A01. Order Number DE83008980.

TORAY, a ray-tracing code has been developed to study electron-cyclotron heating and current drive in toroidal geometry. Ray patterns are initiated similar to those of an actual antenna and a full graphics package has been developed for displaying the behavior of the rays. We study the interplay of the plasma and wave parameters in order to establish which parameters are most important in determining the energy deposition.

24768 **(PPPL—1982) Effects of toroidicity on resistive tearing modes.** Izzo, R.; Monticello, D.A.; Manickam, J.; Strauss, H.R.; Grimm, R.; McGuire, K. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 30p. NTIS, PC A03/MF A01. Order Number DE83008979.

A reduced set of resistive MHD equations is solved numerically in three dimensions to study the stability of tokamak plasmas. Toroidal effects are included self-consistently to leading and next order in inverse aspect ratio, ϵ. The equations satisfy an energy integral. In addition, the momentum equation yields the Grad-Shafranov equation correct to all orders in ϵ. Low beta plasma are studied using several different q-profiles. In all cases, the linear growth rates are reduced by finite toroidicity. Excellent agreement with resistive PEST is obtianed. In some cases, toroidal effects lead to complete stabilization of the mode. Nonlinear results show smaller saturated island widths for finite aspect ratio compared to the cylindrical limit. If the current channel is wide enough so as to produce steep gradients towards the outside of the plasma, both the finite aspect ratio cases and cylindrical cases disrupt.

24769 **(PPPL—1983) Conditioning of ion sources for mass spectrometry of plasmas.** Dylla, H.F.; Blanchard, W.R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Feb 1983. Contract AC02-76CH03073. 23p. NTIS, PC A02/MF A01. Order Number DE83008978.

Mass spectrometry is a useful diagnostic technique for monitoring plasma species and plasma-surface interactions. In order to maximize the sensitivity of measurements of hydrogen-fueled fusion plasmas or hydrogen-based discharge cleaning and etching plasmas, the ion sources of mass spectrometers are operated at or near the high pressure limit of 10^{-4} Torr (10^{-2} Pa). Such high ambient pressures of hydrogen give rise to high background levels of residual gases such as H_2O, CO, and CH_4, due to surface reactions on the ion source electrodes. For a commonly used ion source configuration, the residual gas production is a linear function of the ambient H_2 pressure. Hydrogen conditioning can reduce the absolute residual gas levels. Steady-state residual gas production is observed in a conditioned ion source, which is related to a balance of diffusion and sorption on the electrode surfaces.

24770 **(PPPL—1985) Spectra of germanium and selenium in the 50-350 A region from the PLT tokamak plasma.** Stratton, B.C.; Hodge, W.L.; Moos, H.W.; Schwob, J.L.; Suckewer, S.; Finkenthal, M.; Cohen, S. (Johns Hopkins Univ., Baltimore, MD (USA). Dept. of Physics; Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 23p. NTIS, PC A02/MF A01. Order Number DE83007970.

Spectra of germanium and selenium injected into the PLT tokamak plasma were observed in the 50 to 350 A region for GeXIV-XXV (KI to OI-like) and SeXVI-XXIV (KI to NaI-like). A number of 3p/sup k/-3p/sup k-1/3d transitions predicted by isoelectronic sequence extrapolation have been identified. Also, previously identified lines from ions in the AlI to OI-like and KI-like isoelectronic sequences have been observed in the tokamak plasma.

24771 **(PPPL—1986) Some novel features of the ordinary-mode electron-cyclotron resonance heating of tokamak plasmas.** Arunasalam, V.; Efthimion, P.C.; Hosea, J.C.; Hsuan, H.; Taylor, G. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 16p. NTIS, PC A02/MF A01. Order Number DE83008972.

It is shown that the finite k/sub parallel/ linear theory of absorption predicts: first, that the Doppler effect splits the k/sub parallel/ = o resonance into two closely spaced resonances instead of the usual Gaussian broadening; and second, that although the total absorption is due to the finite size of the electron Larmor orbits, it is mainly determined by T/sub parallel/ and is only weakly dependent on T/sub perpendicular/ via cyclotron overstability type terms. Some consequences of these unique features on plasma heating and rf current drive are also examined.

24772 **(PPPL—1989) Time-dependent drift Hamiltonian.** Boozer, A.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Mar 1983. Contract AC02-76CH03073. 21p. NTIS, PC A02/MF A01. Order Number DE83008982.

The lowest-order drift equations are given in a canonical magnetic coordinate form for time-dependent magnetic and electric fields. The advantages of the canonical Hamiltonian form are also discussed.

24773 (Rijnhuizen—82-140) Proposal for time-resolved ion temperature measurements by means of Rutherford scattering of the JET heating beams. Notermans, G.H.J.; Ven, H.W. van der; Brocken, H.J.B.M. (Stichting voor Fundamenteel Onderzoek der Materie, Jutphaas (Netherlands). Inst. voor Plasma-Fysica). Jan 1982. 24p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700730.

Portions are illegible in microfiche products2 figs., 14 refs., 2 tables.

A diagnostic method is discussed for measuring time-resolved ion temperatures in JET. The method is based on single Rutherford scattering of high energy neutral particles, injected into the plasma. In a previous report the possibilities of a multichord variant of the same method to obtain profile information was discussed. It appears that it is feasible to monitor the plasma ion temperature using only one detector line of sight. The JET neutral heating beams may be applied to provide the neutral particles. If the time-of-flight velocity detector is used in combination with the JET neutral injectors, a time resolution of 0.1 s can be achieved. This very compact detection system has an energy resolution of at least 160 at a flight path of 35 cm length. Calculations show a very low sensitivity of the device for background neutrons and gamma radiation. This, in combination with the short flight path, implies modest screening requirements.

24774 (SAI—254-83-386-LJ) Criterion for Baldwin instability in a symmetric tandem mirror with hot-electron end plugs. Tsang, K.T.; Hafizi, B.; Lee, X.S. (Science Applications, Inc., Boulder, CO (USA). Plasma Research Inst.). Feb 1983. Contract AC03-76ET53057. 14p. NTIS, PC A02/MF A01. Order Number DE83009112.

The stability of a symmetric tandem mirror with hot-electron end plugs against low-frequency modes is investigated using a model first proposed by Baldwin. The Baldwin instability, which is due to the coupling of a negative-energy mode in the plug and a shear Alfven mode in the center cell, is confirmed. It is found that this instability is confined to small ranges of value of L/sub c/, the length of the center cell. Under modest restriction of parameters, the unstable regions in L/sub c/ impose little limitation on L/sub c/.

24775 (SAND—82-1269C) Time-resolved measurements of hydrogen and deuterium fluxes in the ASDEX plasma boundary. Roth, J.; Varga, P.; Martinelli, A.P.; Scherzer, B.M.U.; Chen, C.K.; Wampler, W.R.; Taglauer, E. (Sandia National Labs., Albuquerque, NM (USA); Technische Univ., Vienna (Austria); Chinese Academy of Sciences, Peking. Inst. of Atomic Energy). 1982. Contract AC04-76DP00789. 23p. (CONF-820545—9). NTIS, PC A02/MF A01. Order Number DE82017025.

From 5. international conference on plasma surface; Gatlinburg, TN, USA (3 May 1982).

Portions are illegible in microfiche products.

Hydrogen and deuterium fluxes parallel to the toroidal magnetic field were measured in the plasma boundary of ASDEX using graphite collector probes. Time resolution of the order of 100 ms can be obtained by rotating the cylindrical probes behind an aperture during the discharge. The trapped amount of hydrogen was determined by subsequent thermal desorption; in the analyses of deuterium the D(^{3}He,p)^{4}He nuclear reaction was used. Both methods yield quantitative results. Measurements were done for limiter and divertor discharges in the range of 4 to 20 cm outside the limiter or separatrix. The time distributions show a maximum flux at the beginning and the end of the discharge. The relatively lower flux during the plateau phase of the discharge is in the range 10^{16} to 2 x 10^{17} cm^{-2} sec^{-1}, depending on the radial probe position; the maximum values are higher by a factor of 5 to 50. During neutral hydrogen injection, an additional maximum can be observed. The radial l/e-decay length is about 0.9 cm in front and 0.4 cm behind the fixed limiter. The results are compared with independent measurements in ASDEX and other plasma machines.

24776 (UCRL—88562) Quasi-optical ECRH beam system for MFTF-B. Yugo, J.J.; Shearer, J.W.; Ziolkowski, R.W.; Krause, K.H.; Berkey, J.H.; Fong, C.G. (Lawrence Livermore National Lab., CA (USA)). 1983. Contract W-7405-ENG-48. 6p. (CONF-830210—7). NTIS, PC A02/MF A01. Order Number DE83008593.

From 5. topical conference on radio frequency plasma heating; Madison, WI, USA (21 Feb 1983).

Multiple frequency electron cyclotron resonance heating (ECRH) is required in the anchor regions of MFTF-B. The requirement for a high transmission efficiency as well as some aspects of the operating environment make a quasi-optical transmission system attractive (neutron activation and damage of materials, x-rays, rf window coolant leaks, cryogenic temperatures, etc.). A quasi-optical transmission system increases the transmission efficiency and reduces the complexity of the hardware in the vacuum vessel. A beam transmission efficiency of 94 percent through the off-axis, fundamental electron cyclotron resonance position is achieved if the plasma density is limited to n/sub p/ less than 4 x 10^8 cm^{-3}. For MFTF-B parameters and ECRH at 28 GHz the electron mean free path for an ionizing collision is 5 x 10^6 cm so that most electrons will reach the wall prior to producing additional ionization of the background gas.

24777 Saturation of the lower-hybrid-drift instability by mode coupling. Drake, J.F.; Guzdar, P.N.; Huba, J.D. (University of Maryland, College Park, Maryland 20742). *Physics of Fluids;* **26**: No. 3, 601-604(Mar 1983).

A nonlinear mode-coupling theory of the lower-hybrid-drift instability is presented. It is found that the instability saturates by transferring energy from the growing, long wavelength modes to the damped, short wavelength modes. The saturation energy, mean square of the potential fluctuations, and diffusion coefficient are calculated self-consistently.

24778 Ion heating due to parametrically driven ion wave turbulence. Mizuno, K.; DeGroot, J.S. (Department of Applied Science, University of California, Davis, California 95616). *Physics of Fluids;* **26**: No. 3, 608-610(Mar 1983).

Ion heating is studied in an unmagnetized and nonisothermal plasma (T/sub e/0>>T/sub i/0). The ion temperature increases linearly with time while the ions sample the finite turbulence. The ions are significantly heated (T/sub i//T/sub i/0 > or $\approx$10) when ion wave turbulence is large (Δn/n> or $\approx$10%). The measured results agree with a simplified theory and one-dimensional particle simulation results.

24779 Ion-temperature-gradient instability in toroidal plasmas. Guzdar, P.N.; Chen, L.; Tang, W.M.; Rutherford, P.H. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* **26**: No. 3, 673-677(Mar 1983). Contract AC02-76CH03073.

The stability of the ion-temperature gradient mode in a toroidal plasma is investigated. Using the ballooning-mode formalism, an ordinary difference-differential equation is derived which includes full kinetic effects. The equation is then examined in various limits where it reduces to an ordinary differential equation. Analytic and computational studies show that, for eta/sub i/ equivalentd ln T/sub i/ /d ln n>>1, toroidal effects further destabilize the mode. However, it is also found that toroidal effects give rise to higher eta/sub i/ threshold compared to the slab case. Extensive numerical calculations over a wide range of parameters are carried out to delineate the regions of instability. It is concluded that the eta/sub i/ instability is of relevance to present-day beam-heated tokamaks.

24780 Universal mode with diffusive electrons: linear instability and nonlinear saturation. Beasley, C.O. Jr.; Molvig, K.; van Rij, W.I. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physics of Fluids;* **26**: No. 3, 678-683(Mar 1983). Contract W-7405-ENG-26.

The effect of spatial electron diffusion on the stability properties of the universal drift mode in a sheared magnetic field are studied using an initial value code, TEDIT. In previous studies of this problem Hirshman and Molvig relied on an approximation to

the electron resonance function equivalent to making a Krook approximation for the spatial diffusion operator, D partial²/partialx². The present work treats the diffusion operator precisely and also allows the treatment of a realistic parallel velocity dependence of the diffusion coefficient, D = D(v/sub parallel/). For the case of a velocity-independent diffusion coefficient, the qualitative features found by Hirshman and Molvig are observed. The modes with k/sub y/rho/sub i/>1 destabilize at small values of the diffusion coefficient and saturate at higher values, corresponding to several orders of magnitude in D. There are quantitive discrepancies with the previous work that, near the saturation point, can be accounted for reasonably well by a simple asymptotic theory. However, when the code uses a more realistic form, D = D_0 (v/sub c//'v/sub parallel/') exp(-v²/sub c//v²/sub parallel/)+D/sub c/, where D/sub c/ corresponds to the (small) collisional diffusion, and D_0 parametrizes the turbulence level, then a quantitative difference is observed. Instability persists down to zero turbulence levels, $D_0 = 0$. This is essentially linear instability due to collisional diffusion alone.

24781 **Integral representation for geometric optics solutions.** Hazak, G.; Bernstein, I.B.; Smith, T.M. (Department of Applied Physics, Yale University, New Haven, Connecticut 06520). *Physics of Fluids;* **26**: No. 3, 684-688(Mar 1983).

An integral representation of the geometric optics solutions for the field of dressed particles in inhomogeneous plasma is derived. The representation is a natural generalization of the Fourier integral used for homogeneous systems. The set of plane waves is replaced by a complete orthogonal set of "quasiplane waves" which in practice may be constructed by using the existing ray tracing codes.

24782 **Quasilinear momentum and energy transport.** Mahajan, S.M.; Hazeltine, R.D.; Hitchcock, D.A. (Fusion Research Center, The University of Texas, Austin, Texas 78712). *Physics of Fluids;* **26**: No. 3, 700-704(Mar 1983). Contract FG05-80ET53088;AC05-76ET53036.

The equations of quasilinear momentum and energy transport are studied to show that a suprathermal level of low-frequency fluctuations can cause highly enhanced electron energy transport without effectively changing the plasma resistivity.

24783 **Effect of a transition between regular and stochastic electron motion on the evolution of an obliquely propagating Langmuir wave.** Menyuk, C.R. (Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Physics of Fluids;* **26**: No. 3, 705-723(Mar 1983). Contract AM03-76SF00010.

The evolution of an obliquely propagating Langmuir wave is considered, with emphasis on determining the effect of a transition between regular and stochastic electron motion. The wave has three distinct evolution regimes, whose locations in parameter space depend roughly on the relative sizes of the linear damping rate γ, the electron bounce frequency ω/sub b/ and the electron cyclotron frequency Ω. When ω/sub b/<γ, the wave is in the linear regime and simply damps away. When $\gamma<\omega$/sub b/<Ω, the wave evolution is dominated by regular, trapped electron motion in individual resonances. It is shown that when the propagation angle increases to about 14°, the trapping oscillations present in parallel propagating waves disappear due to phase mixing of the different bounce frequencies. When $\gamma<\Omega<\omega$/sub b/, the wave evolution is dominated by stochastic particle motion from resonance to resonance. It is shown that when a transition is made from the trapping to the stochastic regime, the final (t = ∞) wave amplitude significantly decreases, due to the increased ability of the electrons to take energy from the wave. Finally, simulation results which verify key aspects of the theory are reported.

24784 **Alfven wave heating in general toroidal plasmas.** Bernstein, I.B. (Department of Applied Physics, Yale University, New Haven, Connecticut 06520). *Physics of Fluids;* **26**: No. 3, 730-740(Mar 1983).

A variational formulation is presented within the framework of linearized ideal magnetohydrodynamics of the problem of the heating of a general toroidal plasma by Alfven waves. The extremal value of the functional yields directly the impedance matrix seen by the driving circuits. The problem is couched in generalized coordinates in a fashion amenable to computational implementation. The energy is absorbed in boundary layers which straddle those magnetic surfaces corresponding to continuum eigenfunctions resonant with the driving frequency. The contribution of these resonant surfaces to the extremal value of the variational functional is given explicitly in terms of quantities which must be found by solving the problem in the regions external to the resonant surfaces. The structure of the theory suggests optimum ways of implementing the method.

24785 **Synchrotron emission from a relativistic loss-cone distribution with application to the ELMO Bumpy-Torus Experiment.** Winske, D.; Boyd, D.A. (Laboratory for Plasma and Fusion Energy Studies, University of Maryland, College Park, Maryland 20742). *Physics of Fluids;* **26**: No. 3, 755-765(Mar 1983).

Analytic expressions for the power emitted per unit volume per solid angle per unit frequency at perpendicular propagation as synchrotron radiation from a relativistic loss-cone distribution of electrons are derived and compared with exact numerical results. These expressions are useful for understanding how the radiation scales and for inferring properties of the plasma from measurements of the radiation. As an example, it is shown that the temperature and loss-cone angle of the electron distribution in the ELMO Bumpy Torus (EBT) ring can be determined in a straightforward fashion from the ratio of radiation in the two polarizations at two frequencies. Also, it is demonstrated that the loss-cone angle can be determined from the frequency at which this emission ratio is a minimum, even if the emission ratio itself cannot be measured very accurately.

24786 **Tearing modes in a general cross-section force-free cylindrical tokamak.** Lee, J.K.; Chu, M.S.; Helton, F.J. (General Atomic Company, San Diego, California 92138). *Physics of Fluids;* **26**: No. 3, 766-774(Mar 1983). Contract AT03-76ET51011.

The stability of magnetohydrodynamic tearing modes for a large aspect ratio force-free tokamak with general cross section is studied in terms of an energy principle. Determinations of the marginal stability boundary Δ' and island size using this general two-dimensional method give good agreement with those of known methods for circular equilibria. Results for noncircular equilibria are also presented.

24787 **Measurement of growth rate of plasma drift wave excited by slow electrons.** Barrett, P.J.; Allen, G.R. (Plasma Physics Research Institute, University of Natal, Durban, South Africa). *Physics of Fluids;* **26**: No. 3, 795-796(Mar 1983). Contract AC02-76CH03073.

Measurements are presented on drift waves which are driven unstable by an annular beam of slow electrons. The growth rate of the most unstable mode varies linearly with the injection velocity of the beam, in accordance with fluid theory.

24788 **Plasma convection and line-tying.** Fornaca, S. (Physics Department, University of California, Irvine, California 92717). *Physics of Fluids;* **26**: No. 3, 797-804(Mar 1983). Contract AM03-76SF00034;AT03-76ET53026.

The directed motion of a low-β plasma across a toroidal magnetic field is examined as the degree of electrical contact between the plasma and a conducting end wall (line-tying) is varied in a controlled manner. Experimentally, little difference is found between the motion of a completely isolated plasma and that of a plasma in contact with a wall that does not emit electrons. As the degree of line-tying is increased by making the end wall electron-emitting, the cross-field convection of the plasma is increasingly suppressed. Beyond a critical emission current density, no further suppression is observed. When the system is in the surface-line-tying configuration, the suppression of the directed cross-field motion is accompanied by a large increase in the radial transport of plasma.

24789 **Influence of collisions and incoherence on ion-cyclotron transport in mirror plasmas.** Cohen, B.I.; Cohen, R.H.; Rognlien, T.D. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Physics of Fluids;* **26**: No. 3, 808-819(Mar 1983). Contract W-7405-ENG-48.

The effects of classical Coulomb collisions and wave incoherency on drift-cyclotron-loss-cone (drift-cone) mode anomalous transport are studied analytically and by simulation. Pitch-angle collisions have a cumulative effect on the gyrophase angle, and the spatially varying magnetic field in a mirror well contributes a large geometrical amplification of the gyrophase-angle diffusion. Analytical calculations of this effect for particles with arbitrary pitch angle are confirmed by Monte Carlo simulations. However, for the levels of drift-cone turbulence observed in the 2XIIB magnetic mirror experiment and for its relative collisionality, the effect of pitch-angle collisions on anomalous transport is small. In particular, heating of ions to 40 keV energies cannot be explained by this mechanism. Wave incoherency also destroys superadiabaticity, leads to velocity transport, and provides an approximate model of the finite frequency bandwidth of drift-cone turbulence, e.g., due to bursting effects in 2XIIB. Monte Carlo simulations corroborate the analytical transport theory presented. The simulations exhibit significantly enhanced velocity-space transport and heating of ions to nearly 40 keV energies due to wave incoherency for parameters at the limit of applicability to the 2XIIB experiment. These same considerations of resonant wave-particle interactions are also directly relevant to electron and ion-cyclotron resonance heating and to velocity diffusion driven by unstable Alfven-ion-cyclotron waves in other mirror experiments.

24790 **Electron confinement studies on the EBT-S Bumpy Torus Experiment using soft x-ray techniques.** Hillis, D.L.; Haste, G.R.; Berry, L.A. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physics of Fluids;* **26**: No. 3, 820-829(Mar 1983). Contract W-7405-ENG-26.

Soft x-ray bremsstrahlung measurements have been performed on the ELMO Bumpy Torus (EBT-S) plasma to determine the electron temperature T/sub e/ and electron density density n/sub e/ using a calibrated Si(Li) detector over a wide range of operating conditions. The purpose of this paper is to outline the necessary assumptions and essential x-ray techniques that are inherent in soft x-ray measurements in order to investigate the electron heating and confinement properties of EBT-S. In addition, by utilizing the electron density as determined by the soft x-ray measurements, the previous EBT-S confinement analyses have been extended. The steady-state plasma of EBT-S is heated by microwaves using a continuous wave (cw) gyrotron that can operate up to power levels of 200 kW. From the soft x-ray measurements, both the electron temperature and density are found to increase at higher microwave power levels. For operation at microwave power levels of 200 kW, T/sub e/ approaches 1 keV while n/sub e/ approaches 1.2×10^{12} cm^{-3}. In general, confinement properties are found to improve with increased microwave power. The data are compared with neoclassical transport scaling and the electron transport is found to be collisionless ($\nu/\Omega < 1$) as well as neoclassical.

24791 **Reply to the Comments of B. K. Shivamoggi.** Lau, Y.Y.; Liu, C.S. (Science Applications, Inc., McLean, Virginia 22102). *Physics of Fluids;* **26**: No. 3, 868(Mar 1983).

A reply is made to comments on "Stability of Shear Flow in a Magnetized Plasma". (AIP)

24792 **Flux loss and heating during the formation of a field-reversed configuration.** Sgro, A.G.; Armstrong, W.T.; Lipson, J.; Tuszewski, M.G.; Cochrane, J.C. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review [Section] A: General Physics;* **26**: No. 6, 3564-3566(Dec 1982).

The simulated time evolution of magnetic field profiles and trapped flux in a field-reversed configuration, when compared with the experiment, implies that the rapid decay of the initial reversed flux is due to a resistivity that is anomalously enhanced over its classical value. A tenuous plasma between the field-reversed configuration and the wall carries a significant fraction of the current, and about half of the anomalous Joule heating must be deposited directly in the ions in order to calculate the correct ion temperature. The fractional flux retention is most sensitive to an increase of applied bias field.

24793 **Calculation of hydrogen density in toroidal plasma.** Hogan, J.T. (Oak Ridge National Lab., TN (USA)). *Journal of Nuclear Materials;* **111**: 413-419(Nov-Dec 1982). Contract W-7405-ENG-26.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Calculation of hydrogen recycling in toroidal plasmas (tokamaks, stellarators) requires three-dimensional spatial models. We present numerical results for the distribution of H^0 in the torus for a number of typical examples: standard limiter in a tokamak, stellarator with uniform wall emission, neutral-beam stimulated ('halo') neutrals, axisymmetric tokamak with a gettered surface, and a pump-limiter with the dimensions of that tried on ISX-B. We find that spatial asymmetries are pronounced, as expected from previous experimental work. The asymmetric spatial distribution is needed to calculate radiative emission from low-Z impurities (e.g., carbon and oxygen) which are strongly influenced by impurity thermal charge exchange.

24794 **Numerical analysis of plasma-wall interaction for an oblique magnetic field.** Chodura, R. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 420-423(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

A numerical code is used to calculate energy and incidence angle of plasma ions and electrons impinging on an absorbing wall. Plasma particles coming from a plasma of given density and temperature traverse a transition layer with an electric space charge field perpendicular to the wall and a given magnetic field of arbitrary angle before being adsorbed in the wall. The 1d electrostatic particle code determines the electric field and the change of particle velocity distributions in the transition layer. When the incidence angle psi of the magnetic field is varied from 0^0 (normal) to 90^0 (tangential), the impact energies W of ions and electrons at the wall stay nearly unchanged. Electrons reach the wall according to an isotropic Maxwellian distribution except for large angles psi where only electrons travelling along the magnetic field have a chance to escape the plasma. Ions hit the wall at increasing angles theta for increasing psi. The incidence angle of cold ions (Tsub(i0) = 0) is always steeper than that of the magnetic field. For nearly grazing incidence angle of the magnetic field psi $\rightarrow 90^0$ the ion incidence angle theta becomes grazing as well. After the distribution function is determined the sputtering yield of wall incident ions is calculated for different magnetic field angles psi showing maximum yield for psi near to 90^0.

24795 **Thermal stability of peripheral plasmas.** Ashby, D.E.T.; Hughes, M.H. (Euratom/UKAEA Fusion Association, Abingdon (UK). Culham Lab.). *Journal of Nuclear Materials;* **111**: 454-456(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

It is concluded that the thermal stability of the peripheral plasma depends on the details of the radiation mechanism. Whereas simple 'coronal equilibrium' can lead to instability both charge-exchange recombination and the diffusion of individual charge states are stabilizing influences; neither greatly enhances the magnitude of the impurity radiation.

24796 **Review of the plasma-material interaction problems for reacting and burning plasma experiments.** Miyahara, A. (Nagoya Univ. (Japan). Inst. of Plasma Physics). *Journal of Nuclear Materials;* **111**: 461-478(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

With 80 refs.

Serious problems have to be faced at present in linking present plasma research to fusion reactor engineering. Even in fusion devices of the near-term and of the next generation which aim to evaluate the fusion engineering feasibility of burning plasma experiments such as TFTR, JET, R-tokamak, ZEPHYR and INTOR, plasma-material interactions cause many technological difficulties such as large heat loads, large erosion rates, large magnetic forces and large induced radioactivities. Moreover, impurity control, tritium handling, ash exhaust and refuelling need to be solved by realistic methods with technological justifications. Since present fusion approaches might not give hopeful predictions to an economical, safe, and reliable fusion reactor, it is most important at present to find a possible window of promising fusion research. In this paper, we review technological restrictions from viewpoints of plasma-material interactions, then discuss the fusion research and related material investigations that are necessary to realize reasonable fusion reactor concepts.

24797 **Extended local mixing model for hydrogen retention and isotope exchange.** Brice, D.K.; Doyle, B.L.; Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **111**: 598-605(Nov-Dec 1982). Contract AC04-76DP00789.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The previously reported local mixing model (LMM) for hydrogen retention and isotope exchange is extended to include thermal release of the hydrogen from its trap sites. In addition, a new mechanism for beam-enhanced thermal transport (BETT) is described which accounts for a major portion of the thermal release at elevated temperatures. BETT involves the beam-induced promotion of trapped hydrogen from stronger traps to weaker traps and arises naturally from the basic concepts of the LMM. Comparison of the predictions of the model for hydrogen retention and isotope exchange at elevated temperatures in graphite and TiC show good agreement between experiment and theory.

24798 **Simple theory for maximum H inventory and release: a new transport parameter.** Doyle, B.L. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **111**: 628-635(Nov-Dec 1982). Contract AC04-76DP00789.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

A simplified theory of hydrogen transport in materials is presented. The problem is formulated in terms of a dimensionless transport parameter, W = R(phiK$_o$)sup(1/2)/D where R is the projected range, phi is the incident penetrating flux, K$_o$ is a phenomenological recombination coefficient and D is the diffusion coefficient for hydrogen in the material. Using this parameter, equations which describe recycle times, maximum hydrogen inventory and maximum hydrogen permeation are derived. This treatment yields simple analytic expressions for these quantities which are shown to be excellent approximations to the behavior obtained from exact numerical solutions. This transport parameter further results in a natural classification of the different types of behavior of hydrogen in materials.

24799 **Plasma wake of mesosonic conducting bodies. Pt. 2. An experimental parametric study of the mid-wake ion density peak.** Stone, N.H. (National Aeronautics and Space Administration, Huntsville, AL (USA). George C. Marshall Space Flight Center). *Journal of Plasma Physics;* **26**: 385-397(Dec 1981).

An experimental investigation of the disturbed flow field created by conducting bodies in a mesosonic, collisionless plasma stream is reported. Part 1 dealt with ion focusing by the body's plasma sheath and the subsequent filling of the near-wake void region. In part 2, the mid-wake region is investigated, where, for bodies of the order of a Debye length in size, the focused ion streams converge to form a significant current density peak on the wake axis. A parametric description is obtained of the behaviour of the amplitude, width, and position of this peak. The results also indicate that portions of the axial ion peak are created by additional mechanisms and that body geometry affects the mid-wake structure only when the sheath is sufficiently thin to conform to the shape of the body.

24800 **Nonlinear electrostatic waves: oblique propagation.** Jackson, R.W. (Northeastern Univ., Boston, MA (USA)). *Journal of Plasma Physics;* **26**: 399-406(Dec 1981).

The fluid equations for electrostatic wave forms propagating at small angles to a constant magnetic field are investigated. Both ion cyclotron and charge separation effects are included. Numerical results are given for initial conditions which are consistent with soliton formation. These results show a hybrid nonlinear wave form containing oscillations which are identified as short-wavelength fast ion-acoustic waves and long-wavelength slow ion-acoustic waves. An approximate analytic analysis is performed using the Bogoliubov-Krylov-Mitropolskii perturbation method.

24801 **Nonlinear theta-pinch equilibria.** Abraham-Shrauner, B. (Washington Univ., St. Louis, MO (USA). Dept. of Electrical Engineering). *Journal of Plasma Physics;* **26**: 419-430(Dec 1981).

Analytic solutions for cylindrical, rigid-drift equilibria are searched for by checking the invariance of the second-order, nonlinear differential equations of the line density and particle density under one-parameter Lie groups. No invariance was found for the cylindrical screw-pinch for the polytrope index γ is not equal to 2 of the pressure equation of state. For the Z-pinch, the differential equation for the line density for arbitrary γ is invariant under one group and reduces by Euler's method to an intractable first-order, nonlinear differential equation. In the case of a theta-pinch, the nonlinear differential equations for the particle density and line density are invariant at least under the translation group. The particle density is found as an implicit function of the radial distance r, involving incomplete beta functions of the γth power of the particle density.

24802 **Equilibrium and stability of collisionless systems in the paraxial limit.** Newcomb, W.A. (California Univ., Livermore (USA). Lawrence Livermore National Lab.; California Univ., Davis (USA). Dept. of Applied Science). *Journal of Plasma Physics;* **26**: 529-584(Dec 1981).

A study is made of the equilibrium and stability of a magnetically confined collisionless plasma in the paraxial or 'long, thin' limit. The main field is poloidalaxisymmetric, and a stabilizing quadrupole field is superimposed.

24803 **Effects of toroidal field ripple on suprathermal ions in tokamak plasmas.** Goldston, R.J.; Towner, H.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Plasma Physics;* **26**: 283-307(Oct 1981).

Analytic calculations of three important effects of toroidal field ripple on suprathermal ions in tokamak plasmas are presented. In the first process, collisional ripple-trapping, ions become trapped in local magnetic wells near their banana tips owing to pitch-angle scattering as they traverse the ripple on barely unripple-trapped orbits. In the second process, collisionless ripple-trapping, ions are captured (again near a banana tip) owing to their finite orbits, which carry them out into regions of higher ripple. In the third process, banana-drift diffusion, fast-ion banana orbits fail to close precisely, due to a ripple-induced 'variable lingering period' near the banana tips. These three mechanisms lead to substantial radial transport of banana-trapped, neutral-beam-injected ions when the quantity α^* is identical with epsilonsinthetaNqdelta is of order unity or smaller.

24804 **Stability of parallel flow of a multi-component cylindrical plasma to electrostatic perturbations.** Lucas, R.J. (Illinois Inst. of Tech., Chicago (USA). Dept. of Mathematics). *Journal of Plasma Physics;* **26**: 369-383(Oct 1981).

Sufficient conditions for the stability of parallel flow of a warm N-component cylindrical plasma to electrostatic perturbations are obtained. In the unperturbed state the jth plasma component is assumed to have axial velocity Vsub(j0)(r), r being the radial co-ordinate, and the equilibrium quantities are permitted to be arbitrary functions of r consistent with the zeroth-order equations. The L$_2$-norms of certain system variables are shown to be bounded uni-

formly in time. Circle theorems are obtained for the complex eigenfrequencies of any normal mode.

24805 **Temporal development of a plasma sheath.** Cipolla, J.W. Jr.; Silevitch, M.B. (Northeastern Univ., Boston, MA (USA)). *Journal of Plasma Physics;* 25: 373-389(Jun 1981).

A study is presented of a one-dimensional model for the time-dependent behaviour caused by placing an uncharged conducting surface in contact with a uniform equilibrium plasma. Both the probe potential and plasma response are unknown a priori but are specified through a set of self-consistent model equations and boundary conditions. Some numerical and analytical consequences of this model are investigated.

24806 **Statistical acceleration of electrons by lower-hybrid turbulence.** Wu, C.S. (Maryland Univ., College Park (USA). Inst. for Physical Science and Technology); Gaffey, J.D. Jr. (Naval Research Lab., Washington, DC (USA)); Liberman, B. (Rio Grande do Sul Univ., Porto Alegre (Brazil). Inst. de Fisica). *Journal of Plasma Physics;* 25: 391-401(Jun 1981).

The statistical acceleration of electrons along an ambient magnetic field by large-amplitude lower-hybrid turbulence is discussed. Perturbations driven by a cross-field current and propagating nearly perpendicular to the applied magnetic field are considered. It is assumed that the instability saturates rapidly and that the fluctuating electric field is predominantly electrostatic. The quasilinear diffusion equation is solved using a Green's function technique, assuming a power law spectral energy density. The time evolution of an initial Maxwellian distribution is given and the time rate of change of the mean electron energy is calculated for various cases.

24807 **Relativistic effects on strong Langmuir turbulence.** Freund, H.P. (Science Applications, Inc., McLean, VA (USA)); Liu, C.S. (Maryland Univ., College Park (USA). Dept. of Physics and Astronomy); Kulsrud, R.M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Plasma Physics;* 25: 465-477(Jun 1981).

The relativistic effects on strong Langmuir turbulence which arise from both relativistic plasma temperatures and high-amplitude oscillations are considered. When relativistic effects arise primarily from high plasma temperature, a kinetic formalism is employed and a nonlinear Schroedinger equation is derived from expansion of the Vlasov-Maxwell equations. A fluid treatment is used when the relativistic effects of high wave amplitudes predominate. Here, ion dynamics are ignored and the relativistic electron mass correction results in the same type of three-dimensional phase-amplitude coupling as in the kinetic analysis. A Lagrangian formalism for each limiting case is described which leads to a virial theorem from which thresholds for collapse of arbitrary wave packets can be derived.

24808 **Kinetic analysis of electromagnetic wave backscattering in a magnetized plasma.** Willett, J.E.; Bilikmen, S. (Missouri Univ., Columbia (USA). Dept. of Physics). *Journal of Plasma Physics;* 25: 479-490(Jun 1981).

An analysis is presented which describes the stimulated backscattering of an electromagnetic wave with frequency large compared with the electron cyclotron frequency and the electrostatic scatterer wave frequency. The electron and ion susceptibilities provided by kinetic theory are employed in convenient approximations valid at moderate temperatures. Formulae are derived which permit calculation of the growth rate and threshold in bounded and unbounded plasmas. A numerical study of the effects of a static magnetic field on the stimulated backscattering of a carbon dioxide laser beam in a hydrogen plasma is included.

24809 **Arc notching on PDX neutral beams.** Katz, M.; Segers, C. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 806(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

24810 **Hardening of instruments for fusion reactors.** Baur, J.F.; Miller, P.H. Jr. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 960(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

24811 **Possible steady state current drive for reversed field pinch discharges.** Schoenberg, K.F.; Gribble, R.F. (Los Alamos Natl Lab, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1923(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A steady state current drive concept applicable to reversed field pinch (RFP) discharges is presented. The concept, initially proposed by M. Bevir and J. Gray of the Culham Laboratory, entails driving the RFP's toroidal and poloidal magnetic field circuits with low-frequency oscillating voltage sources. The steady state drive concept was examined with a O-D plasma-circuit simulation code presently employed to model the Los Alamos ZT-40 RFP experiment. Simulations indicate the drive concept is feasible provided its perturbative effect on plasma equilibrium, stability, and transport is minimal A summary of these results, along with their implications on present and future RFP devices, is discussed.

24812 **Impurity detection in the APEX tokamak by in-situ doppler shift laser fluorescence spectroscopy.** Pellin, M.J.; Young, C.E.; Gruen, D.M.; Norem, J.H. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1684-1687(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Laser fluorescence spectroscopy (LFS) is a promising impurity atoms generated from surfaces exposed to fusion plasmas. Here the first continuous wave laser fluorescene measurement of impurities generated during a single tokamak pulse is reported. The results point out the promise of LFS as an essentially real time, in-situ diagnostic allowing a detailed comparison of impurity generation and transport with Tokamak parameters and operating conditions. Results presented will include the Zr-atom density and velocity distribution produced from a Zr-metal target during an Apex Tokamak discharge.

24813 **Studies of fusion product confinement and heating in EBT reactors.** Driemeyer, D.E.; DeVeaux, J.C. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 475-478(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In order to evaluate means of enhancing alpha confinement, the Monte Carlo particle code MCFRM has been modified to represent EBTR (Elmo Bumpy Torus Reactor) geometry. The use of this transport code will serve as a stochastic check to the confinement calculations presented in the ebtr design study as well as introducing slowing-down dynamics into the problem of retaining fusion product energy. The modified version of MCFRM, renamed MCEBTR (Monte Carlo Elmo Bumpy Torus Reactor), tracks individual alpha particle trajectories in representative EBTR magnetic geometries. This paper deals in greater detail with the numerical modelling of MCEBTR and the initial results derived from it.

24814 **Optimal neutral beam heating scenario for FED.** Hively, L.M.; Houlberg, W.A.; Attenberger, S.E. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 715-718(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Optimal neutral beam heating scenarios are determined for FED based on a 1/one-half/-D transport analysis. Tradeoffs are examined between neutral beam energy, power, and species mix for positive ion systems. A ramped density startup is found to provide

the most economical heating. The resulting plasma power requirements are reduced by 10-30% from a constant density startup. For beam energies between 100 and 200 keV, the power needed to heat the plasma does not decrease significantly as beam energy is increased. This is due to reduced ion heating, more power in the fractional energy components, and rising power supply requirements as beam energy increases.

24815 **For the PDX CO/sub 2/ laser experiment. Optical mounts and shutter-window-grating system design.** Bohr, A.H. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1717-1720(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Mechanical design for the PDX CO/sub 2/ Laser Experiment required provision for an optical table on the basement level for laser and source optics, a beam turning table at the same level, and above it (and just below the vacuum vessel), a Shutter-Window-Grating-Assembly. A similar assembly repeated just above the vacuum vessel. Above this a boom supported detector platform terminates the system optics. The optical table was commercially procured and the turning table designed and fabricated at the Laboratory. The Shutter-Window-Grating-Assemblies contained compact mechanical shutters to protect the vacuum windows, remote operated grating rotators (flexible cable drive, and integral mirrors for initial calibration. The detector platform supporting boom was made from non-metallic material with non-magnetic fasteners to eliminate machine magnetic field forces. The boom was also mechanically isolated from the work platform and adjacent diagnostic to minimize vibration effects.

24816 **(ANL/FPP—82-1) Demonstration tokamak-power-plant study (DEMO).** (Argonne National Lab., IL (USA)). Sep 1982. Contract W-31-109-ENG-38. 913p. NTIS, PC A99/MF A01. Order Number DE83008919.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

A study of a Demonstration Tokamak Power Plant (DEMO) has been completed. The study's objective was to develop a conceptual design of a prototype reactor which would precede commercial units. Emphasis has been placed on defining and analyzing key design issues and R and D needs in five areas: noninductive current drivers, impurity control systems, tritium breeding blankets, radiation shielding, and reactor configuration and maintenance features. The noninductive current drive analysis surveyed a wide range of candidates and selected relativistic electron beams for the reference reactor. The impurity control analysis considered both a single-null poloidal divertor and a pumped limiter. A pumped limiter located at the outer midplane was selected for the reference design because of greater engineering simplicity. The blanket design activity focused on two concepts: a Li_2O solid breeder with high pressure water cooling and a lead-rich Li-Pb eutectic liquid metal breeder (17Li-83Pb). The reference blanket concept is the Li_2O option with a PCA structural material. The first wall concept is a beryllium-clad corrugated panel design. The radiation shielding effort concentrated on reducing the cost of bulk and penetration shielding; the relatively low-cost outborad shield is composed of concrete, B_4C, lead, and FE 1422 structural material.

24817 **(ANL/FPP/TM—162) Alternate-fuel reactor studies.** Evans, K. Jr.; Ehst, D.A.; Gohar, Y.; Jung, J.; Mattas, R.F.; Turner, L.R. (Argonne National Lab., IL (USA)). Feb 1983. Contract W-31-109-ENG-38. 66p. NTIS, PC A04/MF A01. Order Number DE83009478.

A number of studies related to improvements and/or greater understanding of alternate-fueled reactors is presented. These studies cover the areas of non-Maxwellian distributions, materials and lifetime analysis, a ^{3}He-breeding blanket, tritium-rich startup effects, high field magnet support, and reactor operation spanning the range from full D-T operation to operation with no tritium breeding.

24818 **(ANL/FPP/TM—168) Tokamak reactor cost model based on STARFIRE/WILDCAT costing.** Evans, K. Jr. (Argonne National Lab., IL (USA)). Mar 1983. Contract W-31-109-ENG-38. 36p. NTIS, PC A03/MF A01. Order Number DE83009477.

A cost model is presented which is useful for survey and comparative studies of tokamak reactors. The model is heavily based on STARFIRE and WILDCAT costing guidelines, philosophies, and procedures and reproduces the costing for these devices quite accurately.

24819 **(CONF-810812—48) Key features of INTOR nuclear systems.** Abdou, M.A. (Argonne National Lab., IL (USA)). May 1981. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE83007908.

From 16. intersociety energy conversion engineering conference (IECEC); Atlanta, GA, USA (9 Aug 1981).

Portions are illegible in microfiche products.

The conceptual design effort for INTOR was broadly defined in three areas: (1) Plasma Physics, (2) Engineering, and (3) Nuclear Systems. This paper is devoted to a summary of the Nuclear Systems effort. The emphasis is placed on the First Wall, Breeding Blanket, and Divertor.

24820 **(CONF-810831—103) Important material considerations in INTOR.** Abdou, M.A.; Mattas, R.F.; Smith, D.L. (Argonne National Lab., IL (USA); Wisconsin Univ., Madison (USA)). 1981. Contract W-31-109-ENG-38. 11p. NTIS, PC A02/MF A01. Order Number DE83007942.

From 2. fusion reactor materials meeting; Seattle, WA, USA (9 Aug 1981).

Portions are illegible in microfiche products.

A number of important material-related problems were identified and analyzed during the Phase-I study for INTOR. The first wall and divertor collector plate are subjected to severe normal and off-normal conditions. A melt layer is predicted to develop in a bare stainless steel wall under plasma disruptions. Graphite tiles will not melt but they introduce other serious uncertainties into the design. The design strategy for the divertor collector plate focused on separating the surface and high heat flux problems and on utilizing a novel mechanical design concept for attaching tungsten tiles to a stainless steel (or copper) heat sink.

24821 **(CONF-811040—198) 10-kA pulsed power supply for superconducting coils.** Ehsani, M.; Fuja, R.E.; Kustom, R.L. (Texas A and M Univ., College Station (USA); Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 3p. NTIS, PC A02/MF A01. Order Number DE83008537.

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A new 4-MW inductor-converter bridge (ICB) for supplying power to pulsed superconducting magnets is under construction at Argonne National Laoratory. This is a second-generation ICB built at Argonne Lab. The analytical, design, and control techniques developed for the first prototype have been used in the design of the new system. The paper presents the important considerations in the design of the new ICB. A brief description of the operation of the circuit is also given.

24822 **(CONF-811040—199) Development of the rf linear accelerator test bed for heavy-ion fusion.** Watson, J.M. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01. Order Number DE83008673.

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The amount of absorbed energy required by high gain deuterium-tritium targets for inertial confinement fusion reactors is now projected to be greater than 1 Megajoule. It has become apparent that a heavy ion fusion driver is the preferred choice in this scenario. To demonstrate this accelerator-based option, the national program has established two test beds: one at Argonne for the rf linac/storage ring approach, and one at Lawrence Berkeley Laboratory developing an induction linac. The Argonne Beam Development Facility (BDF) would consist of a 40 mA rf linac for Xe^{+1}, a stor-

age ring, and a 10 GeV synchrotron. The design and status of the BDF is described as well as future program options to demonstrate as many solutions as possible of the issues involved in this approach.

24823 **(CONF-811040—200) Conceptual design of the INTOR first-wall system.** Smith, D.L.; Majumdar, S.; Mattas, R.F.; Turner, L.; Jung, J.; Abdou, M.A.; Bowers, D.; Trachsel, C.; Merrill, B. (Argonne National Lab., IL (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA); EG and G Idaho, Inc., Idaho Falls (USA)). Oct 1981. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01. Order Number DE83008509.

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Portions are illegible in microfiche products.

The design concept and performance characteristics of the first-wall design for the phase-I INTOR (International Tokamak Reactor) study is described. The reference design consists of a water-cooled stainless steel panel. The major uncertainty regarding the performance of the bare stainless steel wall relates to the response of a thin-melt layer predicted to form on limited regions during a plasma disruption. A more-complex backup design, which incorporates radiatively cooled graphite tiles on the inboard wall, is briefly described.

24824 **(CONF-811040—201) Neutronic analysis of graphite-moderated solid breeder design for INTOR.** Jung, J.; Abdou, M.A. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01. Order Number DE83007644.

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Portions are illegible in microfiche products.

An in-depth analysis of the INTOR tritium-production-blanket design is presented. A ternary system of solid silicate breeder, lead neutron multiplier, and graphite moderator is explored primary from safety and blanket tritium-inventory considerations. Lithium-silicate (Li_2SiO_3) breeder systems are studied along with water (H_2O/D_2O) and Type 316 stainless steel as coolant and structural material, respectively. The analysis examines the neutronics effects on tritium-production regarding: (1) coolant choice; (2) moderator choice; (3) moderator location; (4) multiplier thickness; (5) ^{6}Li enrichment; and (6) ^{6}Li burnup. The tritium-breeding-blanket modules are located at the top, outboard, and bottom (outer) parts of the torus, resulting in a breeding coverage of $\sim$ 60% at the first-wall surface. It is found that the reference INTOR design yields, based on a three-dimensional analysis, a net tritium breeding ratio (BR) of $\sim$ 0.65 at the beginning of reactor operation, satisfying the design criterion of BR $>$ 0.6.

24825 **(CONF-811103—128) Analysis of the separation of protium from blanket tritium-product streams.** Misra, B.; Maroni, V.A. (Argonne National Lab., IL (USA)). Jul 1981. Contract W-31-109-ENG-38. 7p. NTIS, PC A02/MF A01. Order Number DE83007946.

From ANS winter meeting; San Francisco, CA, USA (29 Nov 1981).

The case is considered in which the blanket product stream has been purified to the point where only protium, tritium, and a small quantity of deuterium remain. A cryogenic distillation cascade concept developed specifically to handle this enrichment problem is shown. The concept is based on a series of distillation columns and equilibrators capable of producing a protium-rich stream containing less than 1000 appm T and a tritium-rich stream containing less than 2000 appm H. It is envisioned that both of these streams could be blended with streams of comparable composition in the mainstream position of the fuel cycle without further processing. The computational analysis of the cascade was based on a fixed arrangement of columns and equilibrators and a fixed number of theoretical plates per columns, since these features are less easily varied in an actual system than reflux ratios and flow rates. In order to test the flexibility of this conceptual enruchment system to adjust to variations of the H/T ratio in the feed, H/T values of 0.333, 1.00, and 3.00 were investigated.

24826 **(DOE/DP/40162—1) Transport effects with hot electrons in laser fusion. Final report, October 1, 1981-February 28, 1983.** Shkarofsky, I.P. (MPB Technologies, Inc., Ste-Anne-de-Bellevue, Quebec (Canada)). Feb 1983. Contract AC08-81DP40162. 110p. NTIS, PC A06/MF A01. Order Number DE83009311.

Two explanations are offered which can account for heat inhibition found in laser-fusion experiments. The first explanation requires an anisotorpic electron velocity distribution with a higher temperature parallel to the surface than into the surface. This provides axial heat inhibition. Lateral heat inhibition is associated with azimuthal magnetic fields. The second explanation requires the presence of both hot suprathermal and thermal electrons. The hot electrons can cause the flux limiter to decrease substantially below the free-streaming limit in an intermediate range of collisionality. Conditions for this situation occur in the coronal region. We compare a Maxwellian distribution to an exp(-v^5/v^5/sub c/) variation for the cold electrons and find that the flux limiter decreases more for the latter case. The effects of collisions between cold and hot electrons is also looked into. The Cartesian tensor approach is used in the above investigations with various forms for the zeroth order electron velocity distribution function.

24827 **(DOE/ET/52048—19) Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall.** Watson, R.D.; Peterson, R.R.; Wolfer, W.G. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). Aug 1981. Contract AC02-78ET52048. 9p. (CONF-810831—59; UWFDM—433). NTIS, PC A02/MF A01. Order Number DE82000907.

From 2. fusion reactor materials meeting; Seattle, WA, USA (9 Aug 1981).

A lifetime methodology has been developed which couples the long-term stress history for a generic first wall element to a two-dimensional fatigue crack growth calculation, while including, in a self-consistent manner, the detrimental effects of radiation damage. The reduction in fracture toughness due to embrittlement can reduce lifetimes by as much as a factor of 10 by accelerating stage II fatigue crack growth and enhancing the potential for brittle fracture. Swelling and irradiation creep appear not to be life-limiting, and a certain amount of wall erosion is found to enhance first wall lifetimes.

24828 **(DOE/IG—0189) Tokamak Fusion Test Reactor Project.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 11 Feb 1983. 39p. TIC. Order Number DE83006929.

Report to The Secretary.

Where the project's major contracts for buildings and equipment have experienced significant increases in cost, even though the contracts were for fixed prices, IG concluded that a major reason for the increases was the failure to adequately specify requirements prior to awarding the contracts. IG recommended that the Department should develop guidelines on what constitutes an adequate specification for a fixed-price contract and what controls should be placed over change orders. The Assistant Secretary for Management and Administration indicated in his comments to the draft report that an upcoming revision of the Accounting Practices and Procedures Handbook would establish controls over reallocations of construction funds to operating funds. Recommendations also propose that particular attention be given to ensuring that an agreed-upon plan and budget for completing the project is established, that a performance measurement system be implemented by the Princeton Plasma Physics Laboratory, and that improvements be made in the laboratory's Cost/Schedule Performance Report. Improvements are also needed in the quality assurance and safety programs of the Princeton Plasma Physics Laboratory. A number of recommendations from previous quality-assurance and safety reviews, performed by personnel from the Princeton Plasma Physics Laboratory and the Department of Energy, have not been implemented. Comments to the draft report also address these outstanding issues. (PSB)

24829 **(GA-A—16845) Computer control and data acquisition for neutral-beam injectors.** Glad, A.S. (GA Technologies, Inc., San Diego, CA (USA)). Sep 1982. Contract AT03-76ET51011. 9p. (CONF-820948—7). NTIS, PC A02/MF A01. Order Number DE83008457.

From 12. symposium on fusion technology; Juelich, F.R. Germany (13 Sep 1982).

Computer support of General Atomic's Doublet III neutral beam injectors provides: (1) the capability of acquiring, processing and displaying all beam physics data; (2) the real time periodic monitoring and control of all neutral beam subsystems; (3) the sequencing of multiple ion sources asynchronously from the same computer system. (4) the permanent archiving of all beam physics and diagnostic data.

24830 **(HEDL-SA—2700) Role of radiation-damage analysis in the fusion program.** Doran, D.G. (Hanford Engineering Development Lab., Richland, WA (USA)). Sep 1982. Contract AC06-76FF02170. 11p. (CONF-821049—17). NTIS, PC A02/MF A01. Order Number DE83008402.

From TMS/AIME fall meeting(Radiation damage analysis for fusion reactors); St. Louis, MO, USA (24 Oct 1982).

The objective of radiation-damage analysis is the prediction of the performance of facility components exposed to a radiation environment. The US Magnetic Fusion Energy materials program includes an explicit damage-analysis activity within the Damage Analysis and Fundamental Studies (DAFS) Program. Many of the papers in this volume report work done directly or indirectly in support of the DAFS program. The emphasis is on developing procedures, based on an understanding of damage mechanisms, for applying data obtained in diverse radiation environments to the prediction of component behavior in fusion devices. It is assumed that the Fusion Materials Irradiation Test Facility will be available in the late 1980's to test (and calibrate where necessary) correlation procedures to the high fluences expected in commercial reactors.

24831 **(HEDL-TME—82-28) Preliminary assessment of interactions between the FMIT deuteron beam and liquid-lithium target.** Hassberger, J.A. (Hanford Engineering Development Lab., Richland, WA (USA)). Mar 1983. Contract AC06-76FF02170. 54p. NTIS, PC A04/MF A01. Order Number DE83009719.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Scoping calculations were performed to assess the limit of response of the FMIT lithium target to the deuteron-beam interactions. Results indicate that most response modes have acceptably minor impacts on the lithium-target behavior. Individual modes of response were studied separately to assess sensitivity of the target to various phenomena and to identify those needing detailed evaluation. A few responses are of sufficient magnitude to warrant further investigation. Potential for several different responses combining additively is identified as the major area requiring further consideration.

24832 **(IPPJ—529) Tokamak-stellarator hybrid configurations with unlinked helical coils.** Ikuta, K. (Nagoya Univ. (Japan). Inst. of Plasma Physics). Jul 1981. 13p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700729.

The equilibrium configuration of toroidal, current-carrying plasma is investigated, where the plasma is confined in a vacuum stellarator configuration generated by unlinked helical coils. In the limit of current-free configurations the equilibrium of plasma can be obtained since the vacuum field forms a family of closed, nested magnetic surfaces.

24833 (JAERI-M—9390, pp 8-30) **Overview of United States tritium programs.** Baublitz, J.E. (Department of Energy, Washington, DC (USA)). Mar 1981. B. Order Number DE83780427.

From US/Japan workshop on fusion fuel handling; Tokyo, Japan (13 Oct 1980).

Overview of tritium programs in technology development and in environmental and health areas is given in this report. The first part of the report explains the organization of tritium research in the United States. Four Assistant Secretaries (the Director of Energy Research, the Assistant Secretary for Environment, the Assistant Secretary for Nuclear Energy, and the Assistant Secretary for Defense Programs) of the Department of Energy share the responsibility for the development of fusion technology. Under the Department of Energy, there are a number of laboratories and universities participating in the technology development of tritium related systems for nuclear fusion. The second part of this report illustrates the activities done at these laboratories. At Los Alamos, the Tritium System Test Assembly (TSTA) is under construction. At Lawrence Livermore, the studies of basic hydrogen isotope properties have been made, and organic getters have been developed. The Rotating Target Neutron Source is operating at LL. At Argonne National Laboratory, the Lithium Processing Test Loop has been operated. The Princeton Plasma Physics Laboratory is constructing the Tokamak Fusion Test Reactor (TFTR). At Oak Ridge National Laboratory, works are going on in tritium permeation research. At Sandia Livermore, a lot of works have been done on material interactions, and the tritium system design support for the Zephyr ignition project is provided. The Mound Facility is constructing several tritium systems for TFTR. The University of Wisconsin has been working on solid breeder concepts and conceptual tritium system design. Details of these works are explained.

24834 (JAERI-M—9390, pp 31-43) **Research program and present status of tritium technology in Japan Atomic Energy Research Institute.** Obata, Yukio (Japan Atomic Energy Research Inst., Tokai, Ibaraki. Tokai Research Establishment). Mar 1981. B. Order Number DE83780427.

From US/Japan workshop on fusion fuel handling; Tokyo, Japan (13 Oct 1980).

The theoretical and experimental studies on plasma physics are conducted at Japan Atomic Energy Research Institute (JAERI). The main device is the medium size tokamak JFT-2. The plasma heating technology using both neutral beam injectors and radiofrequency heating is developed. Plasma-wall interaction is intensively studied. The design studies of the fusion machines which follow JT-60 is in progress. The development of superconducting magnets is also in progress. The development of blanket and reactor materials has been studied. The development of tritium technology is explained in this report. Regarding the study of the fusion fuel circulation and purification system, the process technology is to be predominantly investigated. The process technology includes purification, hydrogen isotope separation, storage, analysis, measurement, etc. In relation to the INTOR workshop, the system analysis of hydrogen isotope separation in the fuel circulation system has been carried out. Studies are made concerning the preparation of lithium oxide for blankets, and the determination of its physical and chemical properties. The encouraging results of tritium recovery have been obtained. The studies concerning the safe handling of tritium are in progress.

24835 (JAERI-M—9390, pp 148-162) **Development of tritium technology for the United States Magnetic Fusion Energy Program and an update on the Tritium Systems Test Assembly.** Anderson, J.L. (Department of Energy, Washington, DC (USA)). Mar 1981. B. Order Number DE83780427.

From US/Japan workshop on fusion fuel handling; Tokyo, Japan (13 Oct 1980).

The tritium technology development for the DOE fusion program takes place principally at three laboratories. The major aspects of the program are explained. Mound Facility has been involved in the Tritium Effluent Control Laboratory (TECL) project and the Tritium Storage and Delivery System (TSDS) project for TFTR. The goal of TECL is to prevent any tritium release to environment, and to recover for reuse all tritium released within the laboratory. The TSDS is designed to achieve the highest possible levels of reliability, safety, and tritium containment. The TSDS will be tested with the load of 10^4 Curies of tritium to ensure the reliable operation of the entire system. The program on fusion reactor researches at the Argonne National Laboratory includes a number of applied research subjects. The principal focus of this work is on the studies of fuel handling, breeder blanket processing and tritium containment. Modest advances have been made in recent years in the study of liquid lithium processing. The recovery of tritium following the environmental or atmospheric release of tritium is one

of main concerns at Lawrence Livermore National Laboratory. The Rotating Target Neutron Source (RTNS-2) at LLNL is an accelerator-based neutron source. The tritium permeability of structural materials and the surface effects on the permeation rate were measured at Oak Ridge National Laboratory. The activities at other facilities in U.S.A. are also introduced in this paper.

24836 **(ORNL/Sub—79/21453/13) 60-GHz-gyrotron development program. Quarterly report No. 13, July-September 1982.** Shively, J.F.; Caplan, M.; Choi, E.K. (Varian Associates, Palo Alto, CA (USA). Palo Alto Microwave Tube Div.). 1982. Contract W-7405-ENG-26. 114p. NTIS, PC A06/MF A01. Order Number DE83008554.

The objective of this program is to develop a microwave oscillator capable of producing 200 kW of CW power at 60 GHz. A CW experimental tube, X-5, which incorporated a thinner double disc output window to improve window bandwidth, and some modifications to the drift tunnel and cavity coupling proven to be successful in earlier pulse tube tests produced 123 kW of CW output power at 60 GHz before rf load coolant boiling and tube window failure terminated tests. A water load of new design has been constructed and will be used in conjunction with a 56 GHz gyrotron next quarter. Alternative window designs are being explored and developed.

24837 **(Rijnhuizen—82-142) Summary of processes relevant for the particle balance of a cold plasma blanket contaminated with a small amount of helium.** Potters, J.H.H.M.; Goedheer, W.J. (Stichting voor Fundamenteel Onderzoek der Materie, Jutphaas (Netherlands). Inst. voor Plasma-Fysica). Apr 1982. 15p. NTIS (US Sales Only), PC A02/MF A01. Order Number DE83700731.

Microfiche only, copy does not permit paper copy reproduction. Original copy available until stock is exhausted figs., 24 refs.

A summary is given of the atomic processes which are relevant for the ionization balance and for the transport in a plasma consisting of hydrogen with a small admixture of helium. Attention is paid mainly to processes in plasmas with temperatures below 100 eV and electron densities between $3x10^{13}$ and $3x10^{14}cm^{-3}$ conditions which prevail in a so-called cold plasma blanket. The species considered are electrons, protons, hydrogen atoms (ground state and excited), α-particles, He^{+}-ions (ground state and excited), and helium atoms (ground state and excited). The discussed processes are charge exchange, ionization, recombination, (de-) excitation, and elastic scattering.

24838 **(UCID—19638) Fission-suppressed hybrid reactor: the fusion breeder.** Moir, R.W.; Lee, J.D.; Coops, M.S. (Lawrence Livermore National Lab., CA (USA)). Dec 1982. Contract W-7405-ENG-48. 564p. NTIS, PC A24/MF A01. Order Number DE83008737.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Results of a conceptual design study of a ^{233}U-producing fusion breeder are presented. The majority of the study was devoted to conceptual design and evaluation of a fission-suppressed blanket and to fuel cycle issues such as fuel reprocessing, fuel handling, and fuel management. Studies in the areas of fusion engineering, reactor safety, and economics were also performed.

24839 **(UCID—19748) Analysis of ambient vibrational motion of MFTF-A vessel/magnet structure.** Weaver, H.J.; Fields, D.E.; Mellor, J.E. (Lawrence Livermore National Lab., CA (USA)). 25 Jan 1983. Contract W-7405-ENG-48. 143p. NTIS, PC A07/MF A01. Order Number DE83009113.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

Ambient-acceleration time-history motions were measured on the MFTF-A vessel. These time histories were converted to displacement time-history signals which are to be used as an aid in the design of laser and microwave interferometers. This report describs the test procedures, data-processing techniques, and results of this testing.

24840 **(UCRL—15521-Vol.1) Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets.** Nietert, R.E. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. Contract W-7405-ENG-48. 365p. NTIS, PC A16/MF A01. Order Number DE83009324.

Portions are illegible in microfiche products; Thesis. Submitted to Univ. of Wisconsin, Madison.

The following five appendices are included: (1) physical properties of materials, (2) thermal entrance length Nusselt number variations, (3) stationary particle bed temperature variations, (4) falling bed experimental data and calculations, and (5) stationary bed experimental data and calculations. (MOW)

24841 **(UCRL—15521-Vol.2) Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets.** Nietert, R.E. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. Contract W-7405-ENG-48. 283p. NTIS, PC A13/MF A01. Order Number DE83009322.

Thesis. Submitted to Univ. of Wisconsin, Madison.

The heat-transfer characteristics of flowing and stationary packed-particle beds have recently become of interest in connection with conceptual designs of fusion reactor blankets. A detailed literature survey has shown that the processes taking place in such beds are not fully understood despite their widespread use in the chemical industry and other engineering disciplines for more than five decades. In this study, two experimental investigations were pursued. In the first, a heat-transfer loop was constructed through which glass microspheres were allowed to flow by rgravity at controlled rates through an electrically heated stainless steel tubular test section. In the second, an annular packed bed was constructed in which heat was applied through the outer wall by electric heating of a stainless steel tube. Cooling occurred at the inner wall of the annular bed by flowing air through the central tube. A second air stream was allowed to flow through the voids of the packed bed. An error-minimization technique was utilized in order to obtain the two-dimensional one-parameter effective conductivity for the bed by comparing the experimental and theoretically predicted temperature profiles. Experiments were conducted for various modified Reynolds numbers less than ten.

24842 **(UCRL—52000-83-1) Energy and technology review.** (Lawrence Livermore National Lab., CA (USA)). Jan 1983. Contract W-7405-ENG-48. 39p. NTIS, PC A03/MF A01. Order Number DE83009213.

Portions are illegible in microfiche products.

Separate abstracts were prepared for each of the three included sectons. (MOW)

24843 (UCRL—52000-83-1, pp 13-22) **Laser fusion x-ray measurements.** Jan 1983. NTIS, PC A03/MF A01. Order Number DE83009213.

Portions are illegible in microfiche products.

In Energy and technology review.

A number of new instruments, with greatly improved energy and time resolution and a broader energy range, were developed for measuring x-ray spectra from laser fusion experiments.

24844 **(UCRL—53344-Vol.4) Physics of laser fusion. Volume IV. The future development of high-power solid-state laser systems.** Emmett, J.L.; Krupke, W.F.; Trenholme, J.B. (Lawrence Livermore National Lab., CA (USA)). Nov 1982. Contract W-7405-ENG-48. 76p. NTIS, PC A05/MF A01. Order Number DE83009211.

Solid state lasers, particularly neodymium glass systems, have undergone intensive development during the last decade. In this paper, we review solid state laser technology in the context of high-peak-power systems for inertial confinement fusion. Specifically addressed are five major factors: efficiency, wavelength flexibility, average power, system complexity, and cost; these factors today limit broader application of the technology. We conclude that each of these factors can be greatly improved within current fundamental physical limits. We further conclude that the systematic development of new solid state laser madia, both vitreous and crystalline, should ultimately permit the development of wavelength-flexible, very high average power systems with overall efficiencies in the range of 10 to 20%.

24845 (UCRL—85986) TMX upgrade magnet system mechanical issues. Pedrotti, L.R.; Myall, J.O.; Hibbs, S.M.; Wong, R.L.; Ng, D.S.; Hooper, E.B.; Priest, R.E.; Calderon, M.O.; Chargin, A.K. (Lawrence Livermore National Lab., CA (USA)). 26 Oct 1981. Contract W-7405-ENG-48. 4p. (CONF-811040—176). NTIS, PC A02. Order Number DE82012751.

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Paper copy only, copy does not permit microfiche production.

This paper presents the mechanical design of the TMX Upgrade and discusses its engineering requirements. Specifically, the design and construction features of the water-cooled copper coils-as well as the restraints, supports, and leads-are presented. The cooling and structural requirements are discussed and analyzed, and a new method of aligning the coils on magnetic axis is given.

24846 (UCRL—88222) Environment and safety: major goals for MARS. Maninger, R.C. (Lawrence Livermore National Lab., CA (USA)). 16 Mar 1983. Contract W-7405-ENG-48. 8p. (CONF-830406—4). NTIS, PC A02/MF A01. Order Number DE83009117.

From 5. topical meeting on technology of fusion energy; Knoxville, TN, USA (26 Apr 1983).

The Mirror Advanced Reactor Study (MARS) is a conceptual design study for a commercial fusion power reactor. One of the major goals of MARS is to develop design guidance so that fusion reactors can meet reasonable expectations for environmental health and safety. One of the first steps in the assessment of health and safety requirements was to examine what the guidelines might be for health and safety in disposal of radioactive wastes from fusion reactors. Then, using these quidelines as criteria, the impact of materials selection upon generation of radioactive wastes through neutron activation of structural materials was investigated. A conclusion of this work is that fusion power systems may need substantial engineering effort in new materials development and selection to meet the probable publicly acceptable levels of radioactivity for waste disposal in the future.

24847 Fusion reactivities for several beam and target ion distributions. Slaughter, D. (University of California, Lawrence Livermore National Laboratory, Livermore, California 94550). *Journal of Applied Physics;* **54**: No. 3, 1209-1217(Mar 1983). Contract W-7405-ENG-48.

Fusion reactivities $\langle\sigma v\rangle$ in the mean ion energy range 0.1—200 keV have been calculated for the reactions: D(d,n), T(d,n), D(d, p), ^{3}He(d, p) and T(t,2n); and for several different ion energy and angular distributions considered plausible in hot, magnetically confined plasmas. Calculations were carried out to a numerical accuracy of about 5% and the resulting variation of reactivity with mean ion energy is found to be well represented by a simple polynomial function. The polynomial functions are plotted as a function of mean ion energy and their coefficients given. Results of the calculations show that fusion reactivity is very sensitive to the functional form of the speed distribution at mean energies below a few keV, but reactivity is roughly independent of the form of the speed distribution (within a factor of 2) above 10 keV for most of the reactions investigated. Similarly, the importance of the ion angular distribution is large at energies below a few keV but small at high ion energies.

24848 Magnetohydrodynamic stability of magnetic slabs. Banos, A. Jr.; Adler, E.A.; Fried, B.D.; Jechart, I. (Department of Physics, University of California, Los Angeles, California 90024). *Physics of Fluids;* **26**: No. 3, 780-789(Mar 1983). Contract AM03-76SF00010.

A simplified procedure is developed for calculating the ideal magnetohydrodynamic stability of a "magnetic slab" consisting of two planar rows of staggered parallel conductors carrying oppositely directed (equal or unequal) currents, a configuration which is the planar analog of the University of California, Los Angeles, Large Mirror Ratio Experiment (LAMEX). Instead of solving the Grad—Shafranov equation to find the magnetic field corresponding to magnetohydrodynamic equilibrium, use was made of conformal mapping techniques to obtain analytical expressions for the vector potential A for the sharp boundary case, and then the plasma was allowed to "spill over" into the vacuum region with a permissible pressure profile p(A). Using conventional magnetohydrodynamic analysis, based on the well-known energy principle, the maximum stable pressure gradient on each magnetic surface was determined and, from that, the optimum permissible pressure profile p(A) as a function of the spacings (horizontal and vertical) between the conductors and the currents in the two rows was also determined. Significant reductions in maximum stable beta are found compared to the sharp boundary case.

24849 Simple ablative implosion model: shell dynamics. Mayer, F.J.; Larsen, J.T.; Steele, J.W. (KMS Fusion, Inc., P.O. Box 1567, Ann Arbor, Michigan 48106). *Physics of Fluids;* **26**: No. 3, 830-834(Mar 1983). Contract W-7405-ENG-48.

A simple model, derived from Newton's Second Law, for the ablative implosion of a thin spherical shell is presented. The scaling dependence of the implosion time, shell velocity, and mass loss on shell dimensions and the critical physical parameter, the ablation pressure, is derived. Finally, the model is used to examine implosion energy efficiency and to describe an interesting application, wall-recoil heating of a contained fuel gas.

24850 Experimental studies on pump limiters. Mioduszewski, P. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.). *Journal of Nuclear Materials;* **111**: 253-267(Nov-Dec 1982). Contract W-7405-ENG-26.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Pump limiters are mechanical devices for He-ash removal, fuel particle control, and possibly impurity control. Different designs have been suggested by various authors over the past decade. However, the magnetic divertor concepts seemed to be more promising, mainly because of their remote plasma-material interactions. All of the characteristics of magnetic divertors have been proven experimentally, but the overall performance and complexity cause concern about their application to tokamak reactors. Consequently, it is now time to explore the potential of mechanical particle control devices, i.e. pump limiters. Because of the high recycling at the limiter, it is sufficient to exhaust only a small fraction, about 1-10%, of the limiter particle flux to remove e.g. He at its rate of production. Pump limiter experiments have been conducted so far on Alcator, PDX, Macrotor, and ISX. Depending on the experimental design, a pressure build-up of between 1 mTorr and 50 mTorr has been reported. The closed configuration pump limiters provide high collection efficiencies, but have to accomodate high power fluxes at the leading edge. An open configuration, on the other hand, avoids leading edges but provides only fairly low collection efficiencies. The pump limiter development program now calls for a full pump limiter to be implemented in a major tokamak device. Presently, full-size pump limiter experiments on PDX, ISX, and TEXTOR are in preparation.

24851 Formation of magnetic islands and ergodic magnetic layers in wall-lapping plasma as a non-divertor concept for a reactor-relevant tokamak. Kawamura, T.; Abe, Y.; Tazima, T. (Nagoya Univ. (Japan). Inst. of Plasma Physics). *Journal of Nuclear Materials;* **111**: 268-273(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The formation of resonant islands and the ergodization of magnetic field lines in the tokamak boundary due to the subsidiary helical coils are numerically analyzed for the wall-lapping plasma concept as a non-divertor scenario for a reactor-relevant tokamak. The parameters are taken referring to the R-tokamak, a reacting plasma project in IPP-Nagoya. We have verified that this concept could be realized using the rotating islands produced by three sets of helical coils carrying alternating currents with shifted phases. It is also shown that this is possible by using local helical coils which span limited toroidal regions of the torus.

24852 **Large area pumped limiter experiments in MACROTOR.** Talmadge, S.; Conn, R.W.; Prinja, A.K.; Taylor, R.J. (California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering). *Journal of Nuclear Materials;* **111**: 274-278(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

A large area pumped limiter, similar in principle to designs proposed for prototype reactors, was tested on MACROTOR. Scaling of neutral pressure with plasma density reveals a two-regime feature: a linear regime of low plasma density and a non-linear regime at high plasma density. In the high density regime. Proportional nsup(m) where $2.5 < m < 3.5$. The non-linear interactions come into play when the charge exchange mean free path equals the effective scale length of the channel structure. Energy flux propagating down the pump duct was measured as a function of axial position. The energy flux e-folding length is approximately one diameter near the mouth of the duct. The decay is much slower as the axial position into the duct is increased.

24853 **Physics of particle exhaust in pump limiters.** Prinja, A.K.; Conn, R.W.; Talmadge, S. (California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering); Heifetz, D.; Post, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **111**: 279-286(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Monte Carlo calculations are presented of neutral particle flows in hollow collection probes and large area limiters used in recent experiments. The collected neutral hydrogen flux scales linearly with plasma density for nsub(i) $< 2 \times 10^{11}$ cm^{-3} where the plasma is essentially transparent to the neutrals. For $2 \times 10^{11} <$ nsub(i) $< 2 \times 10^{13}$ cm^{-3} the neutral flux varies mildly nonlinearly as nsub(i)sup(1.26). The transition between regimes is driven by the mean free path for molecular hydrogen dissociation being of the order of the probe dimensions. Calculations of the neutral energy spectra emerging from the pump ducts of various lengths indicates that within the accuracy of available low energy surface data, energy transfer to the duct walls is very inefficient. Furthermore, the results indicate that 'energy freezing' occurs at epithermal energies as a consequence of particle and energy reflection coefficients approaching unity at low energies.

24854 **Infrared thermography of a pump limiter on MACROTOR.** Pontau, A.E.; Gauster, W.B. (Sandia National Labs., Livermore, CA (USA)); Mullendore, A.W. (Sandia National Labs., Albuquerque, NM (USA)); Conn, R.W.; Grotz, S.P.; Talmadge, S.; Taylor, R.J. (California Univ., Los Angeles (USA)). *Journal of Nuclear Materials;* **111**: 287-293(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Infrared thermography in the 2-5 μm wavelength range has been used to observe the surface heating of a pump limiter module in the Macrotor tokamak. Modest temperature rises are attributed to energy deposition by particle fluxes during discharges. Comparison of measured and calculated values indicated that heat loads were determined by module geometry, plasma position, and plasma scrape-off distance. In addition to the gradual, long-term heating of the entire module, rapid (on a time scale $< 10^{-3}$ s) surface heating and cooling, associated with disruptions, were observed. The time scales were consistent with energy deposition for short times and subsequent thermal conduction to the remainder of the module. As much as 10% of the total plasma energy was deposited on the module during these discharges, with up to approximately one-quarter of the energy deposition occurring during several 100 μs disruptions. Infrared thermography was found to be a valuable real-time diagnostic tool for studying the interaction of the plasma with an in-vessel component.

24855 **Computational study of operating regimes for poloidal divertors.** Petravic, M.; Heifetz, D.; Post, D. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **111**: 294-297(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

We have identified three theoretical operating regimes for poloidal divertors. These regimes are determined by the geometry of the divertor and the input energy and particle fluxes, and are characterized by the divertor plasma density and temperature. A fully self-consistent two-dimensional model for the plasma and neutral atom and molecule transport was used to study poloidal divertor operation. Extensions of our previous calculations important to this study were the inclusion of parallel electron and ion thermal conduction. We find that the key physics in divertor operation is the neutral recycling near the neutralizer plate. This can be parametrized by R = GAMMAsub(P)/GAMMAsub(O), the ratio of particle flux striking the neutralizer plate to the particle flux entering the divertor. Values of R approx. equal to 1 can be produced by large pumping rates near the neutralizer plates resulting in low neutral recycling and a high temperature, low density divertor plasma. By decreasing the pumping near the neutralizer plate, R can be raised to an intermediate value of 5-10, the plasma temperature lowered by the same factor, and the density raised by a factor of 10-30. In this regime, escape of the neutrals back to the main plasma is virtually blocked. By further restricting the pumping, R can be raised to twenty or more, thereby lowering the temperature by a factor of twenty or more and raising the density by a factor of ninety or more. Such high density regimes have been observed on D-III and appear to offer the most promise for impurity control and particle control on large reactor experiments such as INTOR or FED. In this paper, we explore the range $3 < R < 16$.

24856 **Pumping and erosion rates for the TFTR and INTOR/FED limiter designs.** Heifetz, D.; Post, D.; Ulrickson, M.; Schmidt, J. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **111**: 298-304(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Wall power deposition and erosion rates due to charge-exchanging neutrals, along with pumping rates, are computed for various TFTR and INTOR/FED limiter and divertor schemes. It was found that only approx. equal to 7% of charge exchange power was deposited on the first wall in a proposed INTOR/FED 'T' limiter. Thus, the first wall will not have to be replaced as often as the limiter.

24857 **Reduction of recycling by pumping at the PDX limiter.** Cecchi, J.L.; Knize, R.J.; Dylla, H.F.; Fonck, R.J.; Owens, D.K. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Sredniawski, J.J. (Grumman Aerospace Corp., Bethpage, NY (USA)). *Journal of Nuclear Materials;* **111**: 305-310(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

We have installed two arrays of Zr-Al getters adjacent to the PDX limiter to effect the pumping of neutrals formed in this region. The projected area of the getters is approximately 0.4% of the plasma area, and the measured H_2 pumping speed is 16000 l/s. During ohmic discharges, the getters reduced the electron density decay time from 340 to 180 ms. This result, combined with Hsub(α), data indicates that the recycling coefficient decreases by 10% or more.

24858 **Neutral gas blanket effects in a gaseous divertor.** Hsu, W.L.; Yamada, M.; Tenney, F.H. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **111**: 311-316(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The gaseous divertor employs a neutral gas blanket to absorb the plasma heat flux in the divertor chamber. This novel method for resolving the heat loading problem in a conventional divertor system is simulated experimentally. In our operational range (nsub(e) <= 5 x 10^{13} cm^{-3}, Tsub(e) <= 5 eV) it is demonstrated that the localized plasma heat flux is scattered relatively uniformly with neutral pressures of a few microns. At large neutral pressures the plasma stream is neutralized without touching a material wall. Plasma pumping inhibits neutral backflow and can sustain a neutral pressure difference comparable to the plasma pressure. Effective divertor channel conductance is measured to be reduced by a factor of six.

24859 **Test of a toroidal large area limiter in the ASDEX tokamak.** Vernickel, H.; Berhringer, K.; Campbell, D.; Eberhagen, A.; Engelhardt, W.; Fussmann, G.; Gehre, O.; Gernhardt, J.; Glock, E.; Gierke, G.V. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 317-322(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

A toroidal large area limiter was installed in the divertor tokamak ASDEX. The limiter basically consists of a plane annular stainless steel sheet which is tangential to the plasma and which is placed in the bottom of the main plasma chamber. In a second series of experiments this limiter was covered with graphite plates. With the steel limiter clean discharges could not be obtained. Energy deposition on the limiter was only 12% of the input. With the graphite limiter Zsub(eff) was below 3, energy deposition on the limiter was 25% (up to 40% in low density operation). Energy deposition was toroidally symmetrical. Results, including some experiments with a single null divertor are presented.

24860 **All TiC coated limiter experiment in the JIPP T-II tokamak.** Gomay, Y. (Toshiba Corp., Kawasaki, Kanagawa (Japan). Research and Development Center); Kawahata, K.; Noda, N.; Tanahashi, S. (Nagoya Univ. (Japan). Inst. of Plasma Physics). *Journal of Nuclear Materials;* **111**: 323-327(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

All the aperture limiters in JIPP T-II were changed to TiC coated graphite. The maximum density in this condition is 7.6 x 10^{13} cm^{-3} with the safety factor of 4.5, which is 2.7 times as high as the value obtained by the Murakami scaling. The Zsub(eff) values with this density and with a medium density of 2.4 x 10^{13} cm^{-3} are both close to unity after discharge cleaning for only 3 days. The behavior of limiter material release was found to be steady within a factor of two during the discharge, suggesting that the release mechanism is ion sputtering. Residual gas analysis also suggested that this sputtering is not chemical, which may be partly because the limiter surface temperature during the discharge is below 150°C.

24861 **RF divertor principle study in the TFR plasmas.** *Journal of Nuclear Materials;* **111**: 328-331(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

When resonant conditions are met (coincidence between the harmonic of the cyclotron frequency and the two-ion hybrid layers), an effective cleaning of the discharge is observed. Since diverted particles are expelled out from the discharge with any high energy, they can be trapped into the wall or the limiter and no longer contribute to the plasma contamination through recycling. However, although the sputtering yield of energetic argon ions on nickel is very high, no noticeable increase of the nickel content was observed for the resonant conditions.

24862 **Impurity control in the Varennes tokamak.** Boucher, C.; Geoffrion, J.; Gregory, B.C.; Johnston, T.W.; Stansfield, B.L.; Terreault, B.; Vitali, J.C.A. (Quebec Univ., Varennes (Canada). Energy Research Centre); Couture, P.; Fuchs, V.; Shoucri, M.M. (Institut de Recherche de l'Hydro-Quebec, Varennes (Canada)). *Journal of Nuclear Materials;* **111**: 332-334(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Published in summary form only.

24863 **Divertor efficiency in ASDEX.** Engelhardt, W.; Becker, G.; Behringer, K.; Campbell, D.; Eberhagen, A.; Fussmann, G.; Gehre, O.; Gierke, G.V.; Glock, E.; Haas, G. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 337-342(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The divertor efficiency in ASDEX is discussed for ohmically heated plasmas. The parameters of the boundary layer both in the torus midplane and the divertor chamber have been measured. The results are reasonably well understood in terms of parallel and perpendicular transport. A high pressure of neutral hydrogen builds up in the divertor chamber and Franck-Condon particles recycle back through the divertor throat. Due to dissociation processes the boundary plasma is effectively cooled before it reaches the neutralizer plates. The shielding property of the boundary layer against impurity influx is comparable to that of a limiter plasma. The transport of iron is numerically simulated for an iron influx produced by sputtering of charge exchange neutrals at the wall. The results are consistent with the measured iron concentration. First results from a comparison of the poloidal divertor with toroidally closed limiters (stainless steel, carbon) are given. Diverted discharges are considerably cleaner and easier to create.

24864 **Impurity levels and power loading in the PDX tokamak with high power neutral beam injection.** Fonck, R.J.; Bell, M.; Bol, K.; Brau, K.; Budny, R.; Cecchi, J.L.; Cohen, S.; Davis, S.; Dylla, H.F.; Goldston, R. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* **111**: 343-354(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The PDX tokamak provides an experimental facility for the direct comparison of various impurity control techniques under reactor-like conditions. Four neutral beam lines inject > 6 MW for 300 ms. Carbon rail limiter discharges have been used to test the effectiveness of perpendicular injection, but non-disruptive full power operation for > 100 ms is difficult without extensive conditioning. Initial tests of a toroidal bumper limiter indicate reduced power loading and roughly similar impurity levels compared to the carbon rail limiter discharges. Poloidal divertor discharges with up to 5 MW of injected power are cleaner than similar circular discharges, and the power is deposited in a remote divertor chamber. High density divertor operation indicates a reduction of impurity flow velocity in the divertor and enhanced recycling in the divertor region during neutral injection.

24865 **Review of the recent expanded boundary divertor experiments in the Doublet III device.** Mahdavi, M.A.; Armentrout, C.J.; Blau, F.P.; Bramson, G.; Brooks, N.H.; Brown, B.B.; Burrell, K.H.; Callis, R.; Chase, R.P.; Deboo, J.C. (General Atomic Co., San Diego, CA (USA)). *Journal of Nuclear Materials;* **111**: 355-361(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Analysis of the expanded boundary divertor in Doublet III reveals a medium density operating regime (anti nsub(e) approx. <= 4 x 10^{13} cm^{-3}), in which (1) the divertor density nsub(e) (Div) rises with the cube of the main plasma line average density, anti nsub(e), and (2) the neutral pressure at the exhaust end of the diver-

tor has a quadratic dependence on anti nsub(e) (with divertor plasma temperatures approx. <= 15 eV). In this regime, injection of argon into the discharge results in a steady state concentration of argon, which is two orders of magnitude higher in the divertor plasma than in the main discharge. This trapping effect suggests that the argon concentration in the divertor region may be useful as an externally controllable parameter; that is, injected argon effectively cools the plasma boundary, yet is not deleterious to the plasma as a whole. A model which successfully describes the behavior of the edge and divertor plasmas in ohmically heated discharges suggests that these desirable trapping and radiative features may be maintained in the high powered neutral beam heating phase.

24866 **High density, single-null poloidal divertor results in doublet III.** Shimada, M.; Nagami, M.; Ioki, K.; Izumi, S.; Maeno, M.; Matsuda, T.; Nishikawa, M.; Ohtsuka, M.; Shinya, K.; Yokomizo, H. (General Atomic Co., San Diego, CA (USA)). *Journal of Nuclear Materials;* 111: 362-369(Nov-Dec 1982). Contract AT03-80SF11512.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Experimental results of divertor characteristics on impurity suppression, helium ash exhaust and remote radiative cooling are reviewed. In a throatless (open) divertor such as the single-null poloidal divertor in Doublet III, a dense and thick scrape-off layer provides strong particle shielding in high density divertor discharges, which results in a high neutral pressure and radiative cooling of the divertor even in an impurity-free condition. The feasibility of employing an open divertor in a reactor-grade device like INTOR is discussed. A preliminary result of divertor experiments with a 1.6 MW neutral-beam injection is presented.

24867 **Divertors and impurity control: where we stand, where we have to go.** Keilhacker, M.; Lackner, K. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* 111: 370-380(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

In the present paper we first recapitulate the maximum impurity concentrations compatible with the condition for ignition and with the restrictions on fuel dilution and state the requirements on particle exhaust and heat removal for an Intor size ignition experiment. We then discuss the potential of the divertor to meet these requirements by summarizing the results of present-day divertor experiments and the current theoretical understanding of divertor operation. In the last section we finally show how some divertor characteristics scale with heating power, and suggest experiments that have to be carried out before divertors can possibly be used in fusion reactors.

24868 **Models for poloidal divertors.** Post, D.E.; Heifetz, D.; Petravic, M. (Princeton Univ., NJ (USA). Plasma Physics Lab.). *Journal of Nuclear Materials;* 111: 383-395(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Recent progress in models for poloidal divertors has both helped to explain current divertor experiments and contributed significantly to design efforts for future large tokamak (INTOR, etc.) divertor systems. These models range in sophistication from zero-dimensional treatments and dimensional analysis to two-dimensional models for plasma and neutral particle transport which include a wide variety of atomic and molecular processes as well as detailed treatments of the plasma-wall interaction. This paper presents a brief review of some of these models, describing the physics and approximations involved in each model. We discuss the wide variety of physics necessary for a comprehensive description of poloidal divertors. To illustrate the progress in models for poloidal divertors, we discuss some of our recent work as typical examples of the kinds of calculations being done.

24869 **Global estimates of impurity levels and wall erosion in INTOR.** McCracken, G.M.; Fielding, S.J.; Ohtsuka, H. (Euratom/UKAEA Fusion Association, Abingdon (UK). Culham Lab.). *Journal of Nuclear Materials;* 111: 396-402(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

A global model is described which calculates the impurity levels resulting from plasma and impurity sputtering. The edge temperature is determined in a self consistent way from the input power and the particle containment time. Calculations are presented for the specific case of INTOR considering both carbon and iron walls. The impurity level is very dependent on the global particle containment time. For iron walls the impurity level is probably tolerable but a large fraction of the α heating power is radiated. For carbon walls the radiation level is much lower.

24870 **Theoretical model for hot plasma flowing to a wall with recycling.** Bailey, A.W.; Emmert, G.A. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). *Journal of Nuclear Materials;* 111: 403-407(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Plasma flow along field lines to material walls is a common property of divertors and limiters where the plasma is neutralized at a target plate. A theoretical model to describe the hot plasma flowing to the wall, where it is neutralized, and the cold plasma produced by ionization of thermal neutrals has been developed. A necessary ingredient in this model is the electrostatic potential, which turns out to be positive near the wall (relative to further in the plasma) before dropping the sheath. The treatment is kinetic rather than fluid-like and largely analytic. The results agree well with a numerical kinetic calculation by Morse and co-workers for a uniform field case. The model is being extended to allow non-uniform magnetic fields, as is appropriate for bundle divertors.

24871 **Plasma motion and purification in an ergodic divertor.** Samain, A.; Grosman, A.; Feneberg, W. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Groupe de Recherches sur la Fusion Controlee). *Journal of Nuclear Materials;* 111: 408-412(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The main problems associated with an ergodic divertor are considered. The pressure gradient in the ergodic layer induces a plasma flow along the flux lines, which allows in principle, control of the energy of the particles reaching the wall. Also the parallel plasma flow tends to drag away the impurity ions and to decontaminate the confined plasma. These effects are considered in the framework of the quasilinear theory. A discussion shows that the real flow pattern consists of quasilinear regions where the flow is limited by transverse and diffusion effects coexisting with regions of free streaming at the sound velocity.

24872 **Dependence of hydrogen recycling on molecular effects in tokamaks.** Howe, H.C. Jr. (Oak Ridge National Lab., TN (USA)). *Journal of Nuclear Materials;* 111: 424-427(Nov-Dec 1982). Contract W-7405-ENG-26.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

In this paper, we discuss several effects which result from introducing hydrogen at the edge of the main plasma as molecules rather than atoms. Molecular ionization and dissociation create a volume source of energetic atoms and ions within several centimeters of the plasma edge. The ions flow to the limiter and ultimately recycle into the plasma. The atoms are created with an isotropic velocity distribution and, therefore, half of the atom flux is directed toward the wall. The plasma fueling profile is calculated using a multigeneration neutral transport model including wall reflection.

24873 **Transport code calculations on the particle and energy unloading through overlapping magnetic islands.** Nicolai, A.; Reiter, D. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik). *Journal of Nuclear Materials;* 111: 428-433(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Superposition of magnetic islands generated by currents in auxiliary windings leads in the plasma boundary to a magnetically 'mixed' layer with destroyed magnetic flux surfaces. The magnetic field structure is globally described by an only radially dependent mean inclination angle of the field lines against the toroidal direction. The model is applied to the parameters of TEXTOR with 4.5 MW additional heating. The maximum mean inclination angle is 2 x 10^{-3}. The temperatures at the separatrix and at the limiter edge are 450 eV and 54 eV. Without 'mixing' the analogous values are 1040 eV and 112 eV, respectively.

24874 **Monte Carlo simulation of the neutral gas density and temperature distribution due to the recycling processes at a poloidal, toroidal or mushroom limiter and at the divertor plate of a poloidal divertor.** Reiter, D.; Nicolai, A. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Plasmaphysik). *Journal of Nuclear Materials;* 111: 434-439(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The divertor models used so far, are either zero-dimensional, therefore accounting only roughly for the neutral gas, or two-dimensional, as for the open INTOR divertor. This model includes gas dynamic flow parallel to the magnetic field, and particle, energy, and momentum transport perpendicular to the magnetic field. Further fluid models are being developed e.g. at the IPP Garching. Since our code has sufficient geometrical flexibility, and because the statistical method is especially adequate for regions with low collision frequency, it is intended to couple the code to one of this divertor plasma models later.

24876 **Wall material characteristics in reacting plasma modelling.** Kawamura, T.; Akaishi, K.; Miyahara, A. (Nagoya Univ. (Japan). Inst. of Plasma Physics). *Journal of Nuclear Materials;* 111: 444-447(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Using the one-dimensional transport equations for impurities and energy flow in the steady-state tokamak plasma, the self-consistent solutions of the impurity density profile and the temperature profile for a reacting DT plasma with the plasma-surface interaction are analyzed. On the basis of these results the influences of the impurities originated from the wall on the central plasma conditions and the Q-value of a reacting plasma are discussed.

(Georgia Inst. of Tech., Atlanta (USA)); Krauss, A.R.; Gruen, D.M. (Argonne National Lab., IL (USA). Chemistry Div.). *Journal of Nuclear Materials;* 111: 448-453(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Recently, it has been proposed that alkali-metal covered surfaces be applied to magnetic fusion devices as a means of controlling plasma impurity contamination and shielding the substrate from erosion. Monolayer films of alkali metals have been shown to sputter primarily as ions under particle bombardment. Thus, it is thought that a sheath potential and/or magnetic fields encountered by a sputtered ion will return the ion to the surface without entering the plasma. In this paper, we investigate the net wall impurity influx associated with coatings which exhibit substantial secondary ion emission compared with those which sputter only as neutral atoms. Included in the analysis are sputtered substrate atoms. These are sometimes found to be a significant fraction of the total sputtering yield for low-Z alkali monolayers and affect the overall performance of such coatings. Estimates of the impurity influx made in the neighborhood of a sheath potential show that secondary-ion emitting coatings are effective as a means of inhibiting plasma impurity contamination and wall erosion.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Gettering is used in the ISX-B tokamak to reduce the impurity concentration. This paper documents the gettering process used, and compares the expected changes in recycling and radiation with those observed experimentally. The enlargement of the operating regime (1/q, anti nsub(e)R/Bsub(phi) space) is discussed. Finally, the effect on one of the objectives of the experimental program, that of obtaining high values of beta, is described.

24880 **ECR discharge cleaning experiment in the JIPP T-II.** Sakamoto, Y.; Ishibe, Y.; Ishii, S.; Okazaki, K.; Oyama, H.; Yano, K. (Institute of Physical and Chemical Research, Wako, Saitama (Japan)); Noda, N.; Kawahata, K.; Kawasumi, Y.; Tanahashi, S. (Nagoya Univ. (Japan). Inst. of Plasma Physics). *Journal of Nuclear Materials;* 111: 485-488(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The first experiment of electron cyclotron resonance discharge cleaning (ECR-DC) on a tokamak device was carried out by using the JFT-2. In the experiment, the cleaning effect was estimated from comparison of QMA (quadrupole mass analyzer) signals of H_2O, CH_4 and CO with those of Taylor-DC, but the influence of ECR-DC on the tokamak discharge plasma was not investigated. In the present work, we focus our attention on the decrease of light impurities (especially oxygen) in tokamak discharge plasma by virtue of ECR-DC. To characterize the tokamak plasma property, the mean plasma resistivity, the intensity of an O II line and the mean electron density without gas puffing were observed. These quantities are expected to decrease with the decrease of impurities.

24881 **Light impurity removal from stainless steel by atomic hydrogen.** Tschersich, K.G.; von Seggern, J. (Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Grenzflaechenforschung und Vakuumphysik). *Journal of Nuclear Materials;* 111: 489-492(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

This study was intended as a model experiment for discharge cleaning (DC) of plasma vacuum vessels and is a continuation of our previous work on Inconel. The objective of discharge cleaning is the removal of light impurities from the vessel surface.

24882 **Structure of metallic coatings for impurity control in MACROTOR.** Keller, L.; Oren, L.; Taylor, R.J. (California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering); Schwirzke, F. (Naval Postgraduate School, Monterey, CA (USA). Dept. of Physics); Bunshah, R.F.; Wagner, C.N.J. (California Univ., Los Angeles (USA). Dept. of Materials Science and Engineering). *Journal of Nuclear Materials;* **111**: 493-497(Nov-Dec 1982). Contract AM03-76SF00010.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The properties of atomic metal condensates are to a large extent determined by parameters such as: microstructure, temperature during deposition, interfacial phenomena, and deposit thickness. At elevated first wall temperatures (200-600°C), a homogeneous metallic film deposition can be achieved. For example, hydrogen embrittlement and flaking through hydride formation, currently a problem in fusion devices, can be avoided. The thickness of Ti-layers for acceptable impurity control must be at least a few hundred Angstroms because effective impurity control requires the physical covering of the impurity adsorbents on the surface. It is shown that thick coatings (micron range), which get formed by repetitive Ti-'gettering' in Macrotor, are likely to form a stable first wall, if properly deposited at elevated temperatures.

24883 **Wall conditioning of the JIPP T-II torus by AC discharge cleaning.** Noda, N.; Tanahashi, S.; Kawahata, K.; Kawasumi, Y. (Nagoya Univ. (Japan). Inst. of Plasma Physics); Ishii, S.; Ishibe, Y.; Okazaki, K.; Oyama, H.; Sakamoto, Y.; Yano, K. (Institute of Physical and Chemical Research, Wako, Saitama (Japan)). *Journal of Nuclear Materials;* **111**: 498-501(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

It has been observed that during AC + ECR-DC the H_2O pressure decays faster as the wall temperature is raised. The decay time changes at a point where the pressure reaches a certain level. This suggests that the mechanisms which dominate the cleaning in the later phase are different from those in the earlier phase. By optimizing AC + ECR-DC, we have found that 40 h of discharge cleaning with the wall temperature of 220°C is sufficient to obtain high density tokamak discharges having Zsub(eff) approx. equal to 1.0. A simple model is proposed to analyze the discharge-cleaning process. By comparing a result calculated with this model to the experimental data, we have found that, for optimization, it is essential to raise the electron density of the discharge-cleaning plasma high enough that the dissociation-loss rate of H_2O is as large as the sticking-loss rate.

24884 **Studies of unipolar arcing in the mini-torus.** Duan, W.; Chen, J.; Yang, S. (Southwestern Inst. of Physics, Sichuan (China)). *Journal of Nuclear Materials;* **111**: 502-509(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Unipolar arcs have been investigated in a small tokamak, the Mini-Torus, on probes made of graphite, aluminium, stainless steel, titanium, and molybdenum, exposed to the plasma by time-resolved in situ observations with an endoscope system and a high speed framing camera in conjunction with photoelectric spectral recordings from an optical monochromator. Various types of arcing tracks are observed. Visual and SEM examination of the details of arc craters reveal several interesting features of the structure and motion of unipolar arcings. Special attention has been paid to the 'stationary arcs' with fixed arc spots (giant craters), some of which show a rotational structure.

24885 **Study of the erosion rate of vacuum arcs in a transverse magnetic field.** Sethuraman, S.K.; Chatterton, P.A. (Liverpool Univ. (UK). Dept. of Electrical Engineering and Electronics); Barrault, M.R. (Etablissements Merlin et Gerin, 38 - Grenoble (France)). *Journal of Nuclear Materials;* **111**: 510-516(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The cathode mass loss due to the action of low-current vacuum arcs under the influence of a high transverse magnetic field has been measured for titanium, stainless steel and graphite. The effects of magnetic field, are current and cathode temperature on the erosion rate are investigated. The measured erosion rate decreases marginally with the magnetic field, the total variation being less than 20% and the rate of decrease is much lower at higher fields. Within the experimental accuracy only very small or no increase of erosion rate is observed with the arc current for currents up to 70 A. For measurements made at higher cathode temperatures (upto 500°C) there is a considerable increase in erosion rate for the stainless steel cathode and the results are discussed for titanium and graphite. The importance of clean cathode surfaces in the erosion studies is demonstrated by observing the cathode spot motion using an Image Converter Streak Camera. This method has proved to be an effective diagnostic tool in judging the surface condition before any measurements are made. Prolonged glow discharge cleaning in hydrogen is found to provide an acceptably clean surface. The earlier reported cathode spot velocity measurements are extended to higher magnetic fields.

24886 **Arc velocity and erosion for stainless steel and aluminium cathodes.** Fang, D.Y.; Nuernberg, A.; Bauder, U.H. (Technische Univ. Muenchen (Germany, F.R.). Lehrstuhl fuer Technische Elektrophysik); Behrisch, R. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 517-521(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The velocity of vacuum arcs in a magnetic field and the erosion at the cathode have been investigated for Al + 3% Mg and stainless steel. The arc currents were adjusted between 16.6 A and 70 A and a magnetic induction of 0.02 to 0.1 T was applied. The arc current and the arc velocity can be measured reproducibly only after conditioning of the cathode surface by 20 to 40 arc operations. For conditioned cathodes at room temperature the arc velocities increase with arc current and magnetic induction. For higher cathode temperatures the arc velocity decreases while the erosion yields and the crater size increases.

24887 **Surface interactions in a reverse field pinch.** McCracken, G.M.; Firth, L.; Goodall, D.H.J.; King, R.E.; Lavender, K.E.; Newton, A.A.; Thompson, V.K. (Euratom/UKAEA Fusion Association, Abingdon (UK). Culham Lab.); Edwards, B.C.; Titchmarsh, J. (UKAEA Atomic Energy Research Establishment, Harwell. Metallurgy Div.). *Journal of Nuclear Materials;* **111**: 522-525(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The principle findings of the investigations were: (1) mechanical deformation occurring at the end of the bellows section adjacent to the weld. (2) Very localised erosion on at least three deformed sections, leading in one case to the puncturing of the liner wall. These eroded spots were all at a region of the liner underneath a gap in the shell. The mechanism whereby the energy is deposited locally is not understood. (3) Deposition of stainless steel as molten droplets was observed over a much larger area adjacent to the shell gap. There is no obvious link between this deposition and the puncture. (4) Arcing is observed over a large proportion of the liner surface: the highest local density of arcs is found on the outer part of the torus, especially near the ports. (5) The inside of the vessel has large coloured areas which were identified as oxide layers probably formed as the result of liner heating by the plasma in the presence of leaks during the last weeks of operation.

24888 **Initiation of arcing at a plasma-wall contact.** Ehrich, H.; Karlau, J.; Mueller, K.G. (Essen Univ. (Gesamthochschule) (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 526-528(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Several years ago wall erosion by unipolar arcs was recognized as a source for impurity production in fusion devices. The mechanisms leading to arcing during plasma-wall interaction have been widely discussed in recent literature for tokamaks as well as for model experiments. However, up to now especially the initiation of arcing and the role of external fields are not well understood. In our investigation the initiation of arcing in a plasma-wall contact was studied by means of a small scale laboratory experiment.

24889 **Thermal processes in tokamaks of the next generation and future reactors.** Vernickel, H. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 531-540(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

In future tokamaks heating power will increase considerably compared with present-day machines. This leads to increased heat loads to surfaces exposed to the plasma. In this paper the models used to calculate the limits for thermal flux imposed by maximum permissible surface temperature and maximum permissible stress are reviewed. Additional constraints for the design resulting from damage caused by disruptions and from erosion by the plasma are mentioned. Different methods of laboratory testing of small samples are surveyed. The designs of the limiters of the next generation of tokamaks are compared.

24890 **Creep deformation of first wall components following a plasma disruption.** Peterson, R.R.; Wolfer, W.G. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). *Journal of Nuclear Materials;* **111**: 541-543(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

We have presented a model for the analysis of transient stresses in a tokamak first wall during a plasma disruption. By completing a representative calculation where excessive melting does not occur and stress relaxation by creep is dominant during the heating phase, we have found that large tensile stresses and plastic deformation should be present in the first wall. In the future, the model will be improved to incorporate a deformation law which includes both creep, plastic deformation, and history-dependent yield stress.

24891 **Modeling the thermodynamic response of metallic first walls during a plasma disruption.** Merrill, B.J.; Jones, J.L. (EG and G Idaho, Inc., Idaho Falls (USA)). *Journal of Nuclear Materials;* **111**: 544-547(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The results indicate that vaporized wall material moves rapidly into the plasma and interaction of the plasma with this vapor produces intense thermal radiation from the vapor. The consequence is a burst of energy deposition on the wall and rapid plasma thermal quench. The significance of these results is the indication of a process that intensifies the rate of energy deposition from a plasma disruption and consequently the extent of wall erosion. Because of assumptions required in the model, the predictions should be considered as approximate. The numerical results are sensitive to the rate of vapor expansion into the plasma and the rate of thermal radiation from the vapor. In future work, models for these processes will be refined.

24892 **Derivation of the power deposition on limiters and divertor targets from time and space resolved thermographical measurements.** Bein, B.K. (Bochum Univ. (Germany, F.R.). Inst. fuer Experimentalphysik); Mueller, E.R. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 548-553(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

From time and space resolved thermographical measurements on limiters or divertor targets in direct contact with the plasma, the power deposited by the plasma on the limiter or divertor plate can be determined by solving the heat conduction equation of the target plate for the incident heat flux at the surface. Based on Green's functions, an expansion solution is derived which can be interpreted to give the surface heat flux for a thermal wave propagating in the interior of the target plate. The reliability and resolution efficiency achievable by this solution are shown in numerical simulations of repeated surface heating and power deposition calculations; even details, such as heat losses after disruptions can be determined quantitatively.

24893 **Dynamics of melting, evaporation, and resolidification of materials exposed to plasma disruptions.** Hassanein, A.M.; Kulcinski, G.L.; Wolfer, W.G. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). *Journal of Nuclear Materials;* **111**: 554-559(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

First wall components exposed to a high energy flux during a plasma disruption experience a sequence of processes which consists of rapid heating, melting, intense evaporation, resolidification, and cool-down. The dynamics of all these processes has an impact on both the melt layer stability and the thermal stress cycle in the component of the first wall that stays solid. The detailed time history of the temperature distribution is accurately computed by solving a two-moving-boundary problem. The time behavior of the melt layer thickness for both stainless steel and molybdenum is calculated for different disruption energies and different energy fluxes. The duration of melting, which is an important factor in determining the melt layer stability under different forces, is calculated for both stainless steel and molybdenum. The duration of the melt layer may in fact be shorter for materials with thicker melt layers. The effect of vapor shielding (the stopping of the incoming plasma ions by the vaporized wall material) on the dynamics of melting is also investigated.

24894 **Melt layer stability following a plasma disruption.** Wolfer, W.G.; Hassanein, A.M. (Wisconsin Univ., Madison (USA). Dept. of Nuclear Engineering). *Journal of Nuclear Materials;* **111**: 560-565(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

When hard plasma disruptions produce melting of a surface layer on first wall components, the melt layer is in general also subject to various forces. Among these, the forces produced by eddy currents and the magnetic fields are the most severe, and they may cause the removal of the melt layer. It appears that one of the most effective mechanisms for removal is by a Rayleigh-Taylor instability. Numerical results are presented for both the most critical wavenumber and its amplification exponent as a function of two parameters which account for the effect of viscosity and surface tension. The results given for the critical amplification exponent allow an easy assessment of the stability of a melt layer when the forces are known. Examples of such an assessment are given, and it is found that within the range of estimated eddy-current forces, the melt layer may or may not be stable. Hydrodynamic instabilities induced by flow and tangential forces appear to be less severe than the Rayleigh-Taylor instability.

24895 **Scaling laws for thermal behavior of inertially cooled limiters allowing for temperature-dependent material properties.** Mast, F.; Vernickel, H. (Association Euratom-Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). *Journal of Nuclear Materials;* **111**: 566-568(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

The use of temperature-averged thermophysical material properties allows fairly accurate (to within 20%) calculations of temperature rise and temperature distributions in inertially cooled parts of tokamaks. Thus the scaling laws derived for constant coefficients, as e.g. the scaling of permissible power load approx. equal to t - sup(1/2) remain valid even for materials with pronounced temperature dependence of thermophysical properties, provided cases with similar temperature sweep are compared. This is no longer true if radiated power at the end of the pulse exceeds 10% of the incident power, since then corrections for radiation cooling are important.

24896 **Changes in limiter surface temperature profiles for small radius plasmas in Doublet III.** Taylor, T.; Brooks, N. (General Atomic Co., San Diego, CA (USA)); Ioki, K. (Japan Atomic Energy Research Inst., Tokai, Ibaraki; Mitsubishi Atomic Power Industries, Inc., Tokai, Iabaraki (Japan)). *Journal of Nuclear Materials;* **111**: 569-572(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

In the present generation of tokamaks, the thermal flux capabilities of inertially cooled in-vessel components is limited to approx. equal to 1 kW cm^{-2} for pulse lengths of a few seconds. To handle the increased heat flux expected in high-energy-density tokamaks, the effective area of limiter-plasma interaction will need to be increased. Effective utilization of the available limiter surface area requires an understanding of the thermal flux pattern. The details of the thermal flux are especially important in the design of more sophisticated or multi-purpose limiters, such as pumped limiters. We report here measurements of the surface temperature of the limiter in Doublet III during reduced-minor-radius, ohmically heated discharges, and compare the measured surface temperature profiles with those predicted by a simple heat-flux model.

24897 **Damage and modifications in the Frascati tokamak limiter.** Ferro, C.; Franconi, E.; Neri, A. (Associazione Euratom-CNEN sulla Fusione, Centro di Frascati (Italy)). *Journal of Nuclear Materials;* **111**: 573-576(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Post-mortem observations of the limiter give some information about its behavior over a large number of different discharges. The outstanding phenomena observed on the limiter can be summarized as follows: (1) The erosion of the limiter and the amount of energy deposited are much lower than those predicted by the standard models, but are in agreement with the concept of 'virtual limiter'. (2) The shape of the limiter surface plays an important role on the heat load distribution, mainly during the steady state. (3) The floating potential of the limiter resulting from electron temperature is below the threshold for arcing (no arc tracks have been observed). (4) The fluence of hydrogen isotopes in the ion side is higher than the saturation value (blistering).

24898 **Deuterium trapping in low-Z coatings.** Erents, S.K. (Euratom/UKAEA Fusion Association, Abingdon (UK). Culham Lab.). *Journal of Nuclear Materials;* **111**: 590-597(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Measurements of deuteron trapping in a series of low-Z wall coatings, proposed for use in JET, are reported. Mass spectrometry has been used to study the re-emission of incident ions of 100 eV-2 keV D_3^+ during bombardment at implant temperatures of between 300 K and 1100 K. Titanium carbide coatings of 20 μm thickness are found to trap large quantities of deuterium at temperatures <= 800 K. Other samples, including alumina, silicon and titanium dioxide all show a saturation behavior following ion doses >= 10^{18} deuterons cm^{-2}. Under certain bombardment conditions an increase in trapping is recorded as the implant temperature is increased from 600 K to 800 K. The implications of these results for the tritium inventory when using D/T plasmas is discussed.

24899 **Some factors affecting the dynamics of a plasma-wall interaction simulator.** Clausing, R.E.; Heatherly, L.; Emerson, L.C. (Oak Ridge National Lab., TN (USA). Metals and Ceramics Div.). *Journal of Nuclear Materials;* **111**: 636-641(Nov-Dec 1982). Contract W-7405-ENG-26.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Isotope mixing and thermal desorption from samples exposed in a glow discharge apparatus were used to study the factors affecting hydrogen recycle and wall inventory. Conditions were chosen to be similar to those expected at the walls in today's experimental fusion devices. The size and nature of the hydrogen reservoir in the wall after plasma pulses was investigated by thermal desorption techniques. Large amounts of deuterium, i.e., 5 x 10^{15} D cm^{-2} remain in the sample 4 min after a single 200 ms plasma pulse. While this result may be explained by a model using bulk diffusion and traps, it is suggested that either a spectrum of desorption energies, or a concentration dependent recombination coefficient, may also be useful in describing the thermal desorption processes. Experiments with various pumping conditions show that readsorption of molecular hydrogen isotopes on the wall should be considered in modeling hydrogen recycle and isotope changeover processes. HD formation without plasmas confirms the role readsorption plays.

24900 **Experimental observation of a non-constant recombination coefficient - H/Pd(110); possible implications for hydrogen recycle in tokamaks.** Carter, W.B. (Oak Ridge National Lab., TN (USA). Metals and Ceramics Div.). *Journal of Nuclear Materials;* **111**: 657-659(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Published in summary form only.

24901 **Tritium permeation in fusion reactor first walls.** Baskes, M.I.; Bauer, W.; Wilson, K.L. (Sandia National Labs., Livermore, CA (USA)). *Journal of Nuclear Materials;* **111**: 663-666(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

For a stainless steel wall subjected to an energetic tritium charge-exchange neutral flux, the tritium permeation rate and tritium inventory through the first wall can be quite large. The magnitude of the effect is critically dependent on the temperatures and surface conditions assumed for the wall as well as the character of the neutron damage traps. The time to steady-state depends almost entirely upon trapping characteristics. For INTOR-like conditions, a steady-state rate of approx. equal to 10^{-3} g/day is possible under optimum conditions while for a first wall at more elevated temperatures (such as DEMO [32]) the tritium permeation rate can easily exceed 1 g/day. These tritium permeation rates can be reduced significantly by the use of permeation barriers at the first-wall-plasma or first-wall-coolant interfaces.

24902 **Advanced materials for in-vessel components.** Mattox, D.M.; Davis, M.J. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **111**: 819-826(Nov-Dec 1982). Contract AC04-76DP00789.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Advanced materials for fusion reactor applications will involve development of structural material for a radiation environment as well as special materials for specific properties such as impurity control, hydrogen recycling, tritium retention, tritium permeation and high thermal inputs. One of the most important materials development areas will be layered composites which are designed to optimize the functional requirement of the materials. This paper reviews some of the concepts presently being pursued to develop advanced layered composite materials for fusion applications.

24903 **Studies of chromium gettering.** Simpkins, J.E.; Mioduszewski, P. (Oak Ridge National Lab., TN (USA). Fusion Energy Div.); Stratton, L.W. (Carleton Coll., Northfield, MN (USA)). *Journal of Nuclear Materials;* **111**: 827-830(Nov-Dec 1982). Contract W-7405-ENG-26.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Preliminary results have shown that hydrogen pumping by chromium is a surface effect. Unlike with titanium, the getter material used in many present day tokamaks, there is no significant diffusion into the bulk. This feature, which would minimize the tritium inventory, makes chromium a viable alternate to titanium gettering for future tokamaks. Additional experiments have been carried out to measure the basic characteristics of chromium films for gases of interest in tokamak research. These gases include deuterium, oxygen and nitrogen. A vacuum system is described which allowed precise control of the test gas, a constant wall temperature and determination of the projected getter surface area. A quadrupole mass spectrometer, rather than simply a total pressure gauge, was utilized to measure the partial pressure of the test gas as well as the residual gas composition in the system. A quartz crystal monitor was used to measure film thickness. Pumping speeds and sticking coefficients are given as a function of surface coverage for each test gas. A comparison will be made with titanium films deposited in the same vacuum system and under similar conditions.

24904 **Surface segregation in binary alloy first wall candidate materials.** Gruen, D.M.; Krauss, A.R.; Mendelsohn, M.H.; Susman, S. (Argonne National Lab., IL (USA). Chemistry Div.; Argonne National Lab., IL (USA). Solid State Science Div.). *Journal of Nuclear Materials;* **111**: 831-838(Nov-Dec 1982).

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

We have been studying the conditions necessary to produce a self-sustaining stable lithium monolayer on a metal substrate as a means of creating a low-Z film which sputters primarily as secondary ions. It is expected that because of the toroidal field, secondary ions originating at the first wall will be returned and contribute little to the plasma impurity influx. Aluminum and copper have, because of their high thermal conductivity and low induced radioactivity, been proposed as first wall candidate materials. The mechanical properties of the pure metals are very poorly suited to structural applications and an alloy must be used to obtain adequate hardness and tensile strength. In the case of aluminum, mechanical properties suitable for aircraft manufacture are obtained by the addition of a few at% Li. In order to investigate alloys of a similar nature as candidate structural materials for fusion machines we have prepared samples of Li-doped aluminum using both a pyrometallurgical and a vapor-diffusion technique. The sputtering properties and surface composition have been studied as a function of sample temperature and heating time, and ion beam mass. The erosion rate and secondary ion yield of both the sputtered Al and Li have been monitored by secondary ion mass spectroscopy and Auger analysis providing information on surface segregation, depth composition profiles, and diffusion rates. The surface composition ahd lithium depth profiles are compared with previously obtained computational results based on a regular solution model of segregation, while the partial sputtering yields of Al and Li are compared with results obtained with a modified version of the TRIM computer program.

24905 **Behavior of hot titanium getters at the plasma edge in tokamaks.** Schwirzke, F. (Naval Postgraduate School, Monterey, CA (USA)); Keller, L.; Oren, L.; Taylor, R.J. (California Univ., Los Angeles (USA). Center for Plasma Physics and Fusion Engineering). *Journal of Nuclear Materials;* **111**: 844-847(Nov-Dec 1982). Contract AM03-76SF00010.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

In preparation for the hot wall Microtor experiment, the surface of a titanium ball has been exposed to power discharges in Macrotor while being heated up to various temperatures in the range of 20-1000°C. Relative sputtering yields of Ti, O, and C as a function of the surface temperature were determined spectroscopically by biasing the Ti-ball negative up to 1 kV during the tokamak discharge. Under the synergetic influence of surface temperature, sheath potential, hydrogen and oxygen loading, the sputtering increases markedly with temperature. Ti contaminated with oxygen shows severe arcing at low sheath potentials. The arcing threshold of a biased Ti-ball depends on previous surface treatment and arc damage.

24906 **Thermal shock testing of low-Z coatings for JT-60.** Nakamura, K.; Yamada, R.; Saidoh, M.; Murakami, Y. (Japan Atomic Energy Research Inst., Tokai, Ibaraki). *Journal of Nuclear Materials;* **111**: 852-855(Nov-Dec 1982).

24910 **Thermal fatigue of a TiB_2 coated, long pulse, high heat flux component.** Whitley, J.B.; Mullendore, A.W.; Watson, R.D.; Smith, M.F.; Blewer, R.S. (Sandia National Labs., Albuquerque, NM (USA)). *Journal of Nuclear Materials;* **111**: 866-867(Nov-Dec 1982). Contract AC04-76DP00789.

From 5. international conference on plasma surface interactions in controlled fusion devices; Gatlinburg, TN (USA) (3 - 7 May 1982).

Published in summary form only.

24911 **Helium embrittlement of stainless steels at ambient temperature.** Caskey, G.R. Jr.; Rawl, D.E. Jr.; Mezzanotte, D.A. Jr. (DuPont, Aiken, SC, USA). *Scripta Metallurgica;* **16**: No. 8, 969-972(Aug 1982).

Notched C-shaped specimens were machined from five stainless steels: Type 304L, Type 316, Nitronic-40, A286, and a modified A286. The modified A286 was in the annealed condition, all others were high-energy-rate forged. 12 refs.

24912 **Nuclear analysis of a d-d tokamak reactor design, wildcat.** Jung, J. (Argonne National Laboratory, 9700 S. Cass Avenue, Argonne, IL 60439). *Transactions of the American Nuclear Society;* **41**: 519(Jun 1982). (CONF-820609—).

From American Nuclear Society annual meeting; Los Angeles, CA, USA (6 Jun 1982).

24913 Stability of Doublet III plasmas against axisymmetric resistive MHD modes. McLain, F.W.; Jensen, T.H. (General Atomic Co., San Diego, CA (USA)). *Journal of Plasma Physics;* **26**: 431-440(Dec 1981).

A study is presented of the stability of doublet plasmas in the Doublet III device against resistive axisymmetric MHD modes. The real characteristics of the device were modelled as accurately as possible. Stabilization is discussed and numerical examples are given, and the relationship between the results obtained and experimental observations from Doublet III is discussed.

24914 Feedback stabilization of tokamaks against slow axisymmetric MHD instabilities. Jensen, T.H. (General Atomic Co., San Diego, CA (USA)). *Journal of Plasma Physics;* **26**: 351-357(Oct 1981).

A formalism for the stability analysis of a system consisting of the plasma, surrounded by a conducting wall or vacuum chamber and coils with their control system is described.

24915 Helios: a 15 TW carbon dioxide laser-fusion facility. Carlson, R.L.; Carpenter, J.P.; Casperson, D.E.; Gibson, R.B.; Godwin, R.P.; Haglund, R.F. Jr.; Hanlon, J.A.; Jolly, E.L.; Stratton, T.F. (Los Alamos National Lab., NM). *IEEE (Institute of Electrical and Electronics Engineers) Journal of Quantum Electronics;* **QE-17**: No. 9, 1662-1678(Sep 1981).

Helios is an eight-beam carbon dioxide laser and target facility for the study of laser-fusion processes. The design of the laser is based on the principle of the electron-beam controlled high-pressure electrical discharge. The eight beams deliver a total of 9 kJ to targets in subnanosecond pulses and the peak intensity at focus exceeds 10^{16} W/cm^2/beam. The laser can be fired at 5 min intervals but the system shot rate is restricted to 2/h because of target insertion, alignment, and preparation of diagnostic systems.

24916 Plasma wake of mesosonic conducting bodies. Pt. 1. An experimental parametric study of ion focusing by the plasma sheath. Stone, N.H. (National Aeronautics and Space Administration, Huntsville, AL (USA). George C. Marshall Space Flight Center). *Journal of Plasma Physics;* **25**: 351-371(Jun 1981).

An experimental parametric investigation is made of the disturbed ion flow field immediately downstream from conducting bodies of spherical and long cylindrical geometries in a collisionless, mesosonic plasma stream. The ion-acoustic Mach number, S, and the normalized test body potential, PHIsub(b), are varied, while the test body radii are of the order of a Debye length for all cases. In addition to standard diagnostics, the ion flux intensity, energy and direction are measured with the recently developed differential ion flux probe. Results are in good agreement with theoretical calculations that include the effects of the test body and space charge potentials.

24917 Bumpy Z-pinch. Jensen, T.H.; Chu, M.S. (General Atomic Co., San Diego, CA (USA)). *Journal of Plasma Physics;* **25**: 459-464(Jun 1981).

The 'bumpy Z-pinch' is a magnetic configuration with potential usefulness for fusion reactors. A conceptually simple version of the configuration is axisymmetric. It contains regions of closed and open field lines. Assuming that the plasma spontaneously maintains an equilibrium it is possible to maintain indefinitely the regions of closed field lines by driving an axial current through the plasma in the region of open field lines. The ratio between the total axial driven current and the total poloidal current in each of the tokamak-like regions can, in principle, be made arbitrarily small, which means that the load impedance can be arbitrarily large. In addition, the configuration has the inherent virtue similar to that of the spheromak that the tokamak-like part of the plasma does not link any material coils.

24918 Design and fabrication considerations for normal copper pf coils located inside tf coils to facilitate replacement. Ayers, J.W.; Srivastava, V.C. (Magn Corp of Am, Waltham, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 162-165(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The location of the Poloidal Field (PF) coils inside the Toroidal Field (TF) coils in tokamak fusion reactors is highly desirable to minimize the cyclic loading and associated heat loads due to ac losses in TF coils. Fusion devices of this configuration built to date have not emphasized coil and coil structure design of fabrication features which facilitate replacement of the PF coils in the event of a failure during operation. This means excessive machine downtime and high costs which make this approach to future machines appear very unattractive. However, based on studies on PLT and TFTR this paper discusses some of the problems involved with replacement of normal copper coils located inside TF coils, as well as suggested design alternates. This may be helpful in the design of tokamak reactors with similar coil configuration.

24919 Epoxy impregnation system for TFTR large coil program. Chrzanowski, J.H.; Pereira, M.A.; Snook, P.G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 339-341(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR Large Poloidal Coil Program required PPPL to mix and handle the quantity of epoxy ever used at a single time on any fusion related program. Close to 250 gallons of epoxy were required for the largest of the poloidal coils fabricated. Special safeguards and procedures were required to ensure a safe and controlled epoxy system. Before the program could begin, tests had to be performed to determine the mechanical property variances due to differing cycles of gelation and cure. These tests, plus tests performed during and just preceding impregnation will be analyzed within this paper.

24920 Low density cavity gas fireball dynamics in the light ion beam target development facility. Peterson, R.R.; Lee, K.J.; Moses, G.A. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 668-671(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

First wall survivability is a critical problem in the design of Inertial Confinement Fusion reactor cavities. Recent calculations of wall stresses show that in a TDF, thermal stresses are much larger than mechanical stresses and that the maximum total stress is considerably larger than the yield stress for the ferritic steel. It is proposed that a graphite fabric liner be inserted on the inside edge of the cavity wall to reduce the total stresses in the wall to below the yield stress.

24921 Local controls and instrumentation for MFTF. Peterson, R.L. (Lawrence Livermore Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 949(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

24922 Effect of a transverse magnetic field on liquid metal two-phase flow pattern. Gherson, P.; Lykoudis, P.S. (Purdue Univ, West Lafayette, Indiana, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1410-1413(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

24923 Thermal performance of EBT-P vacuum concepts. Hellwig, T.M.; Bowers, D.A. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1705-1708(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The choice of vacuum vessel seals and wall material has been an important issue in the design of EBT-P. A stainless steel vessel is desired from seals consideration of the EBT-P environ-

ment. The objective of this study was to identify and evaluate various actively-cooled stainless configurations that could withstand steady state operation at heat fluxes up to 20 W/cm/sup 2/. Three stainless steel concepts were examined in detail; a skin and tube copper backed concept. Detailed thermal analysis was conducted on each concept using a two-dimensional finite difference code.

24924 **Effect of curing condition on the concrete moisture retention and its shielding implication for the design of fusion facilities.** Huang, S.; Chang, J.; Amin, S.; Palmrose, S.; Paxton, J. (Ralph M. Parsons Co, Pasadena, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1909-1911(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Teste were conducted to determine the moisture retention for the 0.5 wt% borated concrete under three curing conditions. The three curing conditions are (1) curing at 100% relative humidity for a 28-day period at 21/degree/C, (2) curing at 100% relative humidity for a 7-day period, then at air-dry 50% relative humidity for the remaining 28-day curing period at 21/degree/C, and (3) curing at 100% relative humidity for a period of 7 days and then curing at air-dry 20% relative humidity for the remaining curing period at 21/degree/C. The concrete shielding curves are presented for several mositure contents. The results should be helpful to assist the design of a cost effective concrete shield for fusion facilities.

24925 **Conception, implementation and performance of the high power, high frequency amplifier for icrh at Fontenay-aux-Roses, France.** Sire, G.; Gerlach, P.; Kalfon, C. (Thomson-CSF, Gennevilliers, Fr). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2113-2117(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The great success of the trials of Ion Cyclotron Resonance Heating (ICRH) conducted at the Centre for Nuclear Research at Fontenay aux-Roses, France using a 500 kW source led to the decision to increase the power levels employed to 3 MW. Two 1.5.MW sources were constructed and have been in operation since March 1981. Guide-lines for the design of the 1.5 MW amplifier stage, practical implementation of the design using a single tube output stage, test procedures and performance figures are given. An account of the difficulties encountered, originating both from the amplifier itself and particular conditions of use, and the methods by which these problems are overcome are included.

24926 **R.f. system for Alfven wave heating of the TCA tokamak.** Lietti, A.; Vugmann, G.; Cheetham, A.D. (Ec Polytech Fed de Lausanne, Switz). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 835-838(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A 2-5 MHz, 2MW oscillator for Alfven wave heating is described. The matching system is discussed and a method of estimating the coupling with the plasma during Tokamak operation is reported.

24927 **Design, fabrication and testing of a model heating and cooling system for a vacuum vessel.** Shimizu, M.; Miyauchi, Y.; Nakamura, H.; Kajiura, S.; Koizumi, M.; Hata, M. (Jpn At Energy Res Inst, Tokai). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1641-1644(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A full-size model of a typical cooling and heating system for a vacuum vessel was manufactured and examined in order to clarify and enhance the efficiency and reliability of the designed system. The model consisted of two parts; one of which had the same structure as the other and was located facing each other to simulate the adiabatic condition of the vacuum-side of a vacuum vessel. Its components were rectangular plates, eletric heater units, cooling pipes inside of which water and air flew as cooling fluid. A lot of kinds of tests and measurements were performed to evaluate efficiency and reliability on the model. The numerical and theoretical analyses on the system were also carried out using the dimensional finite difference technique. The analytical results agreed pretty well with the experimental.

24928 **Large source test stand for H/sup -/(D/sup -/) ion source.** Larson, R.; McKenzie-Wilson, R. (Brookhaven Natl Lab, Upton, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1490-1493(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Brookhaven National Laboratory Neutral Beam Group has constructed a Large Source Test Stand for testing of the various source modules under development. The first objective of the BNL program is to develop a source module capable of delivering 10A of H-(D-) at 25 kV operating in the steady state mode with satisfactory gas and power efficiency. The large source test stand contains gas supply and vacuum pumping systems, source cooling systems, magnet power supplies and magnet cooling systems, two arc power supplies rated at 25 kW and 50 kW, a Large battery driven power supply and an extractor electrode power supply. Currently two types of sources are under test: a large magnetron source and a hollow cathode discharge source.

24929 **Optimization studies of a commercial EBTR power plant.** Zuckerman, D.S.; Bathke, C.G. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1839-1842(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Parametric studies of a commericl Elmo Bumpy Torus Reactor (EBTR) have been conducted based on conceptual design performed by Los Alamos National Laboratory and McDonnell Astronautics Company. These studies were designed to determine the optimum combination of five parameters - number of sectors, major radius, average minor plasma radius (r/sub p/), average magnetic field, and ratio of current in an aspect ratio enhancement coil to toroidal field coil current - which would produce the lowest bus bar cost of electricity (COE). The parametric studies were performed in order to determine trends resulting from changes in various combinations of parameters.

24930 **Conceptual plant design for a commerical EBT reactor.** Barry, K.; Waganer, L. (Ralph M. Parsons Co, Pasadena, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1847-1850(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Conceptual plant design for the EBT reactor reflects a logical integration of systems and components unique to the fusion industry with their balance of plant supporting facilities. The design is based on steady state operation to maxmize overall facility reliability. The primary coolant is pressurized water that is used in both the the first wall/blanket and limiter cooling circuits. The reference thermal reactor power for this four loop plant is 4000 MW; approximately 1210 MW of electrical energy is delivered to the grid.

24931 **OHTE reactor concepts.** Bourque, R.F. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1851-1854(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

OHTE is expected to be an improvement over the reversed field pinch in that the stabilizing reversal of edge toroidal field is augmented by external helical windings rather than totally relying on a dynamo effect. Reactors should be characterized by high power density, small size, moderate magnetic fields, room temperature coils, and ohmic heating to ignition. Five reactors have been studied self-consistently using a comprehensive systems code developed at General Atomic. It is shown that the development increments requird for OHTE commercialization are smaller and lower

plants cost than for tokamaks, and that commerical plants should be economically and technically attractive.

24932 **Conceptual design studies of the Modular Stellarator Reactor (MSR).** Miller, R.L.; Krakowski, R.A. (Los Alamos Natl Lab, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1863-1866(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A preliminary conceptual study has been made of the Modular Stellarator reactor (MSR) as a steady-state, ignited, DT-fueled, magnetic fusion reactor. The MSR concept combines the physics of classic stellarator confinement with an innovative, modular-coil design. Parametric tradeoff calculations are described, leading to the selection of an interim design point for a 4.8-GWT plant based on Alcator transport scalilng and an average beta value of 0.04 in an /L-SCRIPT/? 2 system with a plasma aspect ratio of 11.

24933 **Prototype moving-ring reactor.** Smith, A.C. Jr.; Ashworth, C.P.; Abreu, K.E. (Pac Gas and Electr Co, San Francisco, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1867-1870(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The objective of this work was to design a prototype fusion reactor based on fusion plasmas confined as "Compact Toruses.' Six major criteria guided the prototype design. The prototype must: (1) produce net electricity decisively (P/sub net/ >70% of P/sub gross/), with P/sub net/ approximately 100 MW(e); (2) have small physical size (low project cost) but commercial plant; (3) have all features required of commerical plants; (4) avoid unreasonable extrapolation of technology; (5) minimize nuclear issues substantially, i.e. accident and waste issues of public concern, and (6) be modular (to permit repetitive fabrication of parts) and be maintainable with low occupational radiological exposures.

24934 **Prospects of low activation fusion reactor design.** Hopkins, G.R.; Cheng, E.T.; Maya, I.; Wong, C.P.C.; Schultz, K.R. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1871-1874(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A design study was performed to investigate the implications of using low activation materials in a fusion power reactor. Using the STARFIRE reactor as a model, low activation design concepts were studied for the four major regions of a fusion reactor: first wall and limiter, blanket, shield, and magnet windings. The first wall and limiter are made of water-cooled aluminum. The blanket uses an unpressurized silicon carbide structure contaning Li/sub 2/O breeding material with high temperature, high pressure helium coolant contained in SiC "thimble tubes". The shield is made of SiC and B/sub 4/C aluminum stabilizer and aluminum or carbon fiber epoxy composite for the structure and dewar. The low activation concept can allow fusion to provide an even greater level of inherent safety and thus an even more environmentally acceptable source energy.

24935 **Sensitivity study code for tokamak devices.** Kasai, M.; Nishikawa, M.; Kameari, A.; Yanagiawa, I.; Ueda, N.; Tone, T.; Hiraoka, T. (Mitsubishi At Power Ind Inc, Saitama, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1880-1883(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A FORTRAN code has been developed to conduct sensitivity study for Tokamak devices on physics and engineering parameters. This code is applicable to various kinds of tokamak systems from experimental devices to reactors. The code calculates configuration parameters, weights of components, required power supply capacity and some technological requirements as a function of main plasma parameters and machine parameters. The present version of this code had been successfully applied to parametric studies for INTOR, SPTR (Swimming Pool Tokamak Reactor) and other devices, and will be further improved.

24936 **Methodology for investigating subsystem interactions in a tokamak fusion reactor.** Reierson, J.D.; Menke, J.L. (MITRE Corp, McLean, VA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1884-1887(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A methodology is developed for identifying and tracking the interactions between the subsystems of a magnetic fusion device and a preliminary analysis is completed of the subsystem interactions of a hypothetical D-T tokaamk reactor. This methodology can be useful in program justification, program management, design change control, and critical path analysis of future fusion devices.

24937 **Electric power from near-term fusion reactors.** Longhurst, G.R.; Deis, G.A.; Miller, L.G. (EG and G, Idaho Falls, Idaho, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1888-1891(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper examines requirements and possbilities of electric power production on near-term fusion reactors using low temperature cycle technology similar to that used in some geothermal power systems. Requirements include the need for a working fluid with suitable thermodynamics properties and which is free of oxygen and hydrogen to facilitate tritium management. Thermal storage will also be required due to the short system thermal time constants on near-time reactors. It is possbile to use the FED shield in a binary power cycle, and results are presented of thermodynamic analyses of this system.

24938 **Engineering challenges of underground contained fusion.** Hammond, R.P.; Dooley, J.L. (R and D Assoc, Marine del Rey, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1892-1893(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

There are three main challenges of engineering the first reactor: One problem occurs at the interface between chamber wall and the pipes which must enter to remove steam, return water, and add new charges. Another is the continuous filtration of watr returning to the chamber or of the steam leaving it to remove radioative particulates, which must be prevented from accumulating. A third engineering problem is design of a production line for the charges themselves and for their introduction and final assembly by remote control far underground.

24939 **UWTOR-M, a conceptual design study of a modular stellarator power reactor.** Sviatoslasky, I.N.; Van Sciver, S.W.; Kulcinski, G.L. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1894-1897(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A preliminary design of a 5500 MW/sub th/ modular stellarator power reactor, UW-TOR-M, is presented the parametric considerations which led to the UWTOR-M reference design point are briefly describe. A unique blanket design is proposed which minimized tritium inventory in the reactor. Finally, sine maintainability is a prime consideration, a scheme for is described servcing the first wall/blanket and other reactor components.

24940 **Sheromak approach to high power density reactors.** Olson, R.E.; Gilligan, J.G.; Greenspan, E.; Miley, G.H. (Univ of Ill, Urbana, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1898-1900(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The low power density and large physical size of a tokamak power reactor May render may render it an unacceptable energy

source from a captial investment viewpoint. The present paper, examines some of the features of a Spheromak reactor in which the plasma power density is approximately 50-100 times that of a comparable tokamak. Additional advantages of the Spheromak include reduced requirements on applied magnetic field, a cylindrical coil/blanket geometry, and a flexibility in reactor size in the 100-1000 Mw/sub e/ range.

24941 **Overview of the Tandem Mirror Experiment-Upgrade.** Chargin, A.K.; Calderon, M.O.; Wieskamp, T. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1929(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Tandem Mirror Experiment-Upgrade (TMX-U) is a new experiment in tandem micrror physics. It uses some of the components of the first Tandem Mirror Experiment (TMX), which was shut down in October, 1980 after successfully operating for more than one year. TMX-Upgrade incorporates additional electrostatic plugging due to electron thermal barriers and microwave heating. This paper is an overview of the TMX Upgrade design and construction.

24942 **Engineering design of TFTR and it's impact on future tokamaks.** Sabado, M.M. (Ebasco Serv Inc, New York, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1930(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

TFTR is a second generation tokamak whose key objective is scientific break-even. TFTR is expected to be the first machine to demonstrate proper combination of plasma confinement time, density, and temperature to obtain this objective. A summary of major TFTR design parameters, including TFM, is presented, and their potential impact on future tokamaks discussed. Details of the updated engineering design and analysis of components are described. Status of major hardware fabrication, assembly installation and test are reviewed. TFTR features, technology, predicted performance and their potential implication for future tokamaks are summarized.

24943 **Operational experience with the ASDEX divertor tokamak.** Wesner, F.; Rapp, H.; Schneider, F. (EURATOM, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1931-1934(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The first one and a half years of operation of the ASDEX divertor tokamak have yielded many results of major technological interest. The most important of these are described and the reasons for the following characterisitics are analyzed: the large stability and reproducibility of discharges, the unexpectedly small loop voltage for breakdown, and the possibility of influencing the disruptive instability.

24944 **Start-up and operation of the Texas Experimental Tokamak.** Brower, D.; Gentle, K.; Harris, W.; Hutchins, S.; Terry, D.R.; Nelin, K.; Wildi, P. (Univ of Tex, Austin, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1935-1938(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Texas Experimental Tokamak (TEXT) has been in operation since November 1980. It is now (Oct 1981) operating routinely at I/sub p/?300kA, B/sub T/?2.5 T and has passed test runs at the full design level at 3 T. No significant problems have arisen in the Tokamak itself. Increases in the operating level lhave been paced bh de-bugging and modification of the Toroidal Field Power Supply. However, this supply is working extremely well. It appears that at the full field and pulse length, additional voltage swing and possbuikle operating regimes.

24945 **Modification of Doublet III to a large dee facility.** Davis, L.G.; Rawls, J.M. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1939-1942(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

General Atomic Company's Doublet III tokamak now in its fourth year of operation, is dedicated to investigating non-circular plasmas. The first three years constituted the ohmic heating phase were circular, doublet, and dee configurations were studied. Reactor-like densities were achieved to assure adequate target plasmas for the neutral beam heating phase now beginning. Emphasis during neutral beam heating will be on does where IOMV of heating power will ultimately be delivered. Impurity control via magnetic limiters or simplified divertors will be further studed during the heating experiments. Electron Cycltron Heating (ECH) will add 1-2 MW of heating and provide for current profile control.

24946 **Engineering tests and performance of screw pinch device TPE-2, with non-circular cross-section.** Ikeda, N.; Kiyama, S.; Takeda, S. (Electrotech Lab, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1943-1946(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Some results of the assembling, electrical tests and performance of the screw pinch device TPE-2, with a non-circular cross-section are presented. The main object of the experiments is to attain the long confinement of the fat and high beta plasma produced by the fast shock heating in the screw pinch mode with a force free current and the high beta tokamak mode. plasma, we chose the fat torus and non-circular The another object is to develop the high voltage engineering with the aim of a high beta pulsed reactor.

24947 **Design principles for a large RFP experiment.** Phillpott, J.; Rostagni, G.; Di Marco, J. (Culham Lab, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1947-1950(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An RFP experiment (RFX) has been designed by an International Design Team, by groups of collaborating physicists and engineers working in their home laboratories. This international collaborative project has been brought to an advanced stage of system and component design by the co-operation of three design teams under the co-ordination of a Design Manager, based at Culham Laboratory. The paper summaries the important design principles for an RFP device, based on the outcome of this collaborative design project.

24948 **TPE-1R (M) reversed field pinch experiment.** Shimada, T.; Hirano, Y.; Maejima, Y.; Ogawa, K. (Electrotech Lab, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1951-1954(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This report describes the engineering aspects of the design, tests, and performances of the toroidal device TPE-1RM with which plasma physics researches on "Reversed Field Pinch"configurations are carried out and this is an intermediate scale like HBTX-1A, ZT-40M, and ETA-BETA II. In TPE-1RM experiments are being performed in order to obtain an optimum reversed field configurations for MHD stability. The main description in this report is devoted to the metal vacuum vessel and specially contrived electrical circuit for field programming control techniques. The experiments with this device have been successful both from the technical and physcial points of view.

24949 **Comparison of numerical solutions of the shell stress analysis for a large RFP experiment.** Schrefler, B.A.; Majorana, C.E. (Univ of Padova, Italy). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1955-1958(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Mechanical behaviour of the toroidal shell of a large RFP experiment is investigated by means of several finite elements models. A semi-analytical model is applied to analyze the half of the torus contained between two minor gaps. This model allows for a realistic simulation of the applied forces and hence gives a good picture of the stress states around the point loads. It is also shown that simpler models such as the axisymmetric one or a model composed by pipe elements are indadequate for this purpose.

24950 **Challenges of designing fusion reactors for remote maintainability.** Mason, L.S. (EG and G, Idaho Falls, Idaho, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1959-1962(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

One of the major problems faced by the fusion community is the development of the high level of reliability required to assure that fusion will be a viable commercial power source. Much of the responsibility for solving this problem falls directly on the designer in developing concepts that have a high level of maintainability. The problems are both near-term, in developing maintainability for next generation engineering oriented reactors; and long range, in developing full maintainability for the more commercial concepts with their required high level of on-line time. The near-time challenge will include development of unqiue design concepts to perform inspection, maintenance, replacement, and testing under the stringent conditions imposed by the next generation engineering oriented machines. The long range challenge will focus on basic design concepts that will enable the full mainatability required by commerical fusion.

24951 **Engineering aspects of a D-D commercial tokamak reactor.** Evans, K. Jr.; Baker, C.C.; Brooks, J.N. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1976-1979(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents some of the engineering aspects of WILDCAT, a conceptual design of a D-D tokamak, fusion reactor. This conceptual design has evolved from initial studies of D-D tokamak reactors, and is intended to be a study of a later-model, commerical fusion reactor in the same sense that STARFIRE was such a study for D-T fuel cycle. The major guidelines of the study have been to utilize as fully as possible the advantages of the D-D fuel cycle but to avoid unnecessary extrapolations of parameters from existing D-T designs, in particular STARFIRE. The paper consists of an overview of the reference design, a description of each of the major engineering systems (rf current drive, burn cycle, impurity control, first wall, blanket/shield, TF magnets, and tritium system, and a summary of conclusions).

24952 **Engineering needs of a TRACT fusion reactor program.** Willenberg, H.J.; Churchill, T.L.; Hoffman, A.L. (Math Sci Northwest Inc, Bellevue, WA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1984-1987(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TRACT concept is under development as a vehicle for developing small fusion reactors based on compact torus (CT) plasmas. The success of the TRACT program could result in pilot plant fusion facilities which are capable of producing net electric power at about the cost of current large plasma physics experiments. The physics basis for TRACT is a CT plasmas formed by a carefully programmed field-reversed theta pinch technique in which the plasma is heated to ignition temperatures by axial implosion, followed by adiabatic compression. The formation and axial implosion, principles have beeen demonstrated in experiments at Mathematical Sciences Northwest, Inc. as well as in the Soviet Union.

24953 **Tools and methods for the implementing the control system on the mirror fusion test facility.** Minor, E.G.; Labiak, W.G. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2043-2045(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Installation of the major hardware subsystems for MFTF is nearing completion. These subsystems include the Fusion Chamber System, the eight kV neutral Beam System, the Superconducting Magnet System, and the Personnel Safety System. The Local Controls group has undertaken a uniform approach to implementing the control systems for all the these hardware subsystems. The software and hardware tools which were developed to carry out bringing up subsystems contanining up to 900 separate channels of control and status are also described.

24954 **Lower hybrid rf monitoring system for PLT.** Martin, A.R. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2126-2128(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Lower hybrid power is coupled to PLT through six independent waveguides. Six amplifier klystrons generate a total of 1.2 MW of power at 800 MHz for this experiment. A common crystal controlled signal source drives solid sate low level amplifiers which are followed by power dividers to drive each klystron and to provide a coherent reference for making phase measurements at the monitor cabinet. Each of the six high power channels includes directional couplers for sampling the forward and reflected RF signals. This paper describes the monitor cabinet which procesess the RF samples and provides analog representations of power phase for use by the PLT data acqusition system.

24955 **Overview of INTOR nuclear systems.** Abdou, M.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 569-573(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A serious effort was devoted in the Phase-1 study for INTOR to identifying critical issues and developing credible design concepts for the nuclear systems. Erosion by charge-exchange neutrals and effects of plasma disruption are key issues for the first wall. A melt layer is predicted to develop in a bare stainless steel wall under plasma disruptions. Graphite tiles will not melt but they introduce serious uncertainties into the design. A partial tritium-producing blanket will be installed on INTOR to reduce the cost of externally supplied tritium. The key issue is the solid breeder blanket concept relates to the effect of radiation on tritium inventory in the blanket. The design strategy for the divertor collector plate focused on separating the surface and high heat flux problems and on utilizing a novel mechanical design concept for attaching tungsten tiles to a stainless steel (or copper) heat sink.

24956 **Conceptual design of tritium breeding blanket for INTOR.** Morgan, G.D.; Bowers, D.A.; Delaney, M.J.; Hartman, A.E.; Clemmer, R.G.; Abdou, M.A.; Finn, P.A.; Jung, J.; Misra, B.; Smith, D.L. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 732-735(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The paper describes the U.S. reference design for the tritium breeding blanket for INTOR. Details of the blanket conceptual mechanical design are presented, together with a discussion of thermal, structural, and mechanical aspects and the rationale for selection of key design features. The INTOR design was required to use a solid tritium breeding compound, Li/sub 2/SiO/sub 3/; a solid lead neutron multiplier; low temperature, low pressure water coolant; helium purge gas for tritium removal; and Type 316 austenitic stainless steel. A key feature of the U.S. design is the minimization of tritium inventory, obtained through the use of a graphite neutron moderator to reduce the required amount of breeder, and the use of

tailored gap conductance values to keep the breeder in the optimum temperature range for tritium release.

24957 **Neutronics analysis of graphite-moderated solid breeder blanket designs for INTOR.** Jung, J.; Abdou, M.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 736-739(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An in-depth analysis of the INTOR tritium production blanket design is presented. A ternary system of solid silicate breeder, lead neutron multiplier, and graphite moderator is explored primarily from safety and blanket tritium inventory considerations. Lithium-silicate (Li/sub 2/SiO/sub 3/) breeder systems are studied along with water (H/sub 2/O/D/sub 2/O) and Type 316 stainless steel as coolant and structural material, respectively. The analysis examines the neutronics effects on tritium production regarding: (1) coolant choice; (2) moderator choice; (3) moderator location; (4) multiplier thickness; (5) /sup 6/Li enrichment; and (6) /sup 6/Li burnup.

24958 **Liquid Li-Pb-Bi, a new tritium breeder.** Rogers, A.G.; Benedict, B.L.; Clemmer, R.G. (NC State Univ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1176-1178(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In light of their potential utility as tritium breeder blanket materials, a study was conducted to identify and characterize low-melting phases in the lithium-lead-bismuth system. It is found that a low-melting ternary phase field did in fact exist. In addition, the qualitative reactivity of Li-Bi-Pb alloys with water was tested, and although minimal evidence of exothermic chemical reaction was observed, a physical vapor explosion did occur in one of the tests.

24959 **Solid oxide compounds - properties necessary for fusion applications.** Finn, P.A.; Kurasawa, T.; Nasu, S.; Noda, T.; Takahashi, T.; Takeshita, H.; Tanifuji, T.; Watanabe, H. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1200-1204(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An experimental program was conducted in collaboration with the staff at the Japan Atomic Energy Research Institute for the purpose of generating fusion pertinent thermophysical and chemical data on two ternary lithium oxides that have potential as tritium breeder materials, Li/sub 2/ZrO/sub 3/ and Li/sub 2/TiO/sub 3/. The four areas studied were: (1) fabrication, (2) thermal diffusivity/thermal conductivity, (3) compatibility with candidate structural alloys (HT-9, 316 SS, and Ni-plated 316 SS), and (4) tritium release behavior after irradiation. Where possible, the behavior of these materials was compared with lithium oxide.

24960 **Towards strategy of reliable fusion first wall design.** Schultz, J.H. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1406-1409(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Fusion first walls are subject to a large number of possible failure mechanisms, including erosion due to sputtering, arching, blistering and vaporization and crack growth due to thermal and magnetic stresses. Each of these failure mechanisms is poorly characterized and has the potential of being severe. A strategy for designing reliably in the face of great uncertainty is discussed. Topological features beneficial to reactor availability are identified. The integration of limiter pumping with rf wave launching is discussed, as a means of simplifying reactor design. The concept of a 'sewer' limiter is introduced, as a possible long-life limiter topology. The concept of flexible armor is discussed, as a means of extending maximum life.

24961 **Key design issues in the definition of the fusion engineering device (FED) first wall and limiter features.** Fuller, G.M.; Haines, J.R.; Cramer, B.A.; Davisson, J.P. (McDonnell Douglas Astronaut Co, Oak Ridge, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1447-1450(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

First wall and limiter design activities for the FED have resulted in the identification of the importance of two major issues to the design. These issues are the specification of the .Plasma edge conditions .Nature of plasma disruptions. The resolution of these issues is essential for the development of a demonstration reactor. In this paper the effect of uncertainty in the above phenomena on the design and associated performance is discussed, and the associated design approach is described.

24962 **Mechanical configuration and shielding for FED fuel injectors and diagnostic instrumentation.** Gorker, G.E.; Engholm, B.A.; Nelson, W.D.; Murray, J.G. (GE, Oak Ridge, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1459-1462(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Fusion Engineering Device (FED fuel pellet injectors and some plasma diagnostic instrumentation requirements are based on machine performance and operating scenarios needed to perform tests or experiments. The pellet injector is needed to produce the desired plasma fueling condition and the diagnostic instrumentation is needed to measure the distribution of plasma parameters. Both the pellet injectors and the instrumentation identified in this paper require direct line of sight to the plasma and, therefore, substantial shielding and torus surface space. With the interface design described in this paper it is possible to use common structures and shielding to minimize both of these requirements and yet provide for independent remote maintenance.

24963 **Conceptual design and material consideration on toroidal CTR first wall.** Ma, B.N. (Iowa State Univ, Ames, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1617-1620(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An integrated, modular wedge-shaped first wall and blanket system for a toroidal D-T controlled thermonuclear reactor (CTR) is proposed which differs from various concepts of the first wall or first wall and blanket reference designs reported. The candidate materials are selected to meet the probable environment and the required properties of the integrated, modular first wall and blanket systems. The following important areas are analyzed: (1) neutronics and heavy particle bombaramet, (2) structural integrity, (3) heat transfer and corrosion resistance, and (4) energy generation and tritium breeding of the first wall and blanket material(s).

24964 **INTOR first wall erosion during plasma disruption.** Merrill, B.J. (EG and G, Idaho Falls, Idaho, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1621-1625(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A plasma disruption within a fusion device the size of INTOR can create extensive first wall surface ablation. This paper presents an overview of other INTOR Phase I Design Study ablation models, modeling discussions for the first wall, vaporized material, and melt/vapor interface, and the results of calculations performed for first wall materials of stainless steel, beryllium, and carbon.

24965 **Modular first wall concept for steady state operation.** Kotzlowski, H.E. (Max-Planck Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1626-1629(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

On the basis of the limiter design proposed for ZEPHYR a first wall concept has been developed which can also be used as a large area limiter, heat shield or beam pump. Its specific feature is the thermal contact of the wall armour elements with the water-cooled base plates. The combination of radiation and contact cooling, compared with radiation only, helps to lower the steady state temperatures of the first wall by approximately 50 % and to reduce the cooling-time between discharges. Particulary the lower wall temperature give a larger margin for additional heating of the wall by plasma disruption or neutral beams until excessive erosion or damage of the armour takes place.

24966 **Can wall and limiter erosion be eliminated in fusion reactors?.** Norem, J.H. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1630-1632(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Pump limiter designs, while generally simpler than magnetic diverters have two primarily problems: wall erosion and the resultant plasma impurity concentration. In principle, these problems can both be solved by artificially maintaining an impurity density of low-Z materials in the plasma edge region which should enable impurity deposition on the limiter and walls to exactly compensate erosion while at the same time producing negligible radiation loss from the plasma. In paper outlines a proposed method of in-situ maintenance of pump limiters for tokamak reactors, and describes how this system could be operated, perhap under steady-state conditions.

24967 **Self-sustaining erosion-resistant low z coatings for first wall and limiter applications I: theory.** Krauss, A.R.; Gruen, D.M.; DeWald, A.B. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1633-1636(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

It has been suggested that dilute alkali metal alloys at surfaces facing a Tokamak plasma might be used to provide a self-sustaining low Z alkali metal surface which would shield the structural component of the alloy from erosion. At the same time, the alkali metal overlayer could be expected to primarily sputter as secondary ions, which are returned to the wall and limiter without entering the plasma. In order to achieve this goal, a number of conditions which may by mutually exclusive must be met. Several of these conditions are analyzed limits of performance for dilute alloys of Li in A1 Si, and Cu.

24968 **Doublet III vessel wall protection for 7 MW neutral beam heated plasma operation.** McKelvey, T.E.; Johnson, E.R. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1650-1653(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Doublet III vessel wall protection has been upgraded for the adddition of neutral beam heating. The design of this protection system is described here in detail.

24969 **Initial progress in the first wall, blanket and shield engineering test program for magnetically confined fusion power reactors.** Herman, H.; Baker, C.C.; Maroni, V.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1759-1762(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The first wall/blanket/shield (FW/B/S) Engineering Test Program (ETP) progresses from the planning stage into implementation during July, 1981. the overall background and scope have been described in detail in earlier reports. The program, generic in nature, comprises four test Program Elements (TPE'S) the emphasis of which is on defining the performance parameters for the Fusion Engineering Device (FED) and the major fusion device to follow FED. These elements are discussed here.

24970 **FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems.** Praeg, W.F.; Turner, L.R.; Biggs, J.; Bywater, J.; Fuja, R.; Knott, M.; Lari, R.J.; McGhee, D.G.; Wehrle, R.B. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1763-1766(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

As part of the DOE First Wall/Blanket/Shield (FW/B/S) Engineering Test Program, Argonne National Laboratory (ANL) is carrying out an experimental program to study electromagnetic effects. Electromagnetic effect in a FW/B/S system include time delay of equilibrium field penetration to the plasma, forces and torques, eddy current heating, and electrical arcing. Such effects can arise in a fusion reactor from plasma disruption and normal and abnormal charge and discharge of the magnets. The facility will consist primarily of a solenoid magnet, a surrounding pulsed dipole magnet, and associated power supplies and support structure.

24971 **The FELIX experimental program and future upgrades.** Turner, L.R.; Praeg, W.F.; Lari, R.J.; Wehrle, R.B. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1767-1770(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

As part of the DOE First Wall/Blanket/Shield (FW/B/S) Engineering Test Program, Argonne National Laboratory FELIX (Fusion ELectromagnetic Induction EXperiment to study electromagnetic effects. T?he earliest test will select and verify appropriate eddy current simulation computer program (codes), followed by component concept tests, component model tests, and finally tests with prototypes. This paper describes the experimental and computer code plans and future upgrades for the FELIX facility.

24972 **Elmo Bumpy Torus-reactor first wall/blanket shield (FWBS) design.** Stones, P.B. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1790-1793(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The composite structural design of the first wall/blanket/shield is based on separate, but iteratively-coupled, nucleonics, thermohydraulics, vacuum, limiter and magnetics calculations. integration of these elements into a viable FWBS design incorporating requirements of optimized fabrication techniques, economically feasible cost and installation, and remote maintenance within scheduled downtime, are some of the considerations that the study, on which this paper is based, attempted to satisfy within the bounds of the conceptual nature of the undertaking.

24973 **Low tritium inventory, phase change blanket concept for magnetic fusion.** Willenberg, H.J.; Cassady, P.E.; Hertzberg, A. (Math Sci Northwest Inc, Bellevue, WA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1801-1804(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A magnetic fusion blanket/heat exchanger concept is described in which lithium-lead pellets are melted within a fluidized blanket surrounding the plasma chamber. The liquid lithium-lead is then allowed to fall in droplet form through a counter-flowing inert gas heat exchanger where the tritium is extracted from the droplets and the sensible and latent heat of the lithium-lead is transferred to the gas by direct contact. This concept sharply reduces the tritium holdup time compared with other breeding blanket while permitting efficient heat transport from a magnetic fusion blanket at moderate pressure and low pumping power.

24974 **Nuclear design of Heliotron fusion reactor blankets (II).** Nakashima, H.; Ohta, M.; Iiyoshi, A. (Kyushu Univ, Fukuoka, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1805-1808(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The important aspects of the nuclear design - (a) tritium breeding and (b) shielding of superconducting magnet - are investigated for the heliotron reactor by use of two-dimensional discrete-ordinates code to conduct for the actual geometric details. Emphasis has been laid in the present instance on locating the problems foreseen in the nuclear design rather than solving them.

24975 **Neutronic design for the TFTR lithium blanket module.** Cheng, E.T.; Engholm, B.A.; Su, S.D. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1818-1821(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The preliminary design of a lithium blanket module (LBM) to be installed and tested in the TFTR has been performed under subcontract to PPPL and EPRI. The objectives of the LBM program are calculation and measurement of neutron fluences and tritium production in a breeding blanket module using state of art techniques, comparison of calculations with measurements, and acquisition of operational experience with a fusion reactor blanket module. The neutronic design of the LBM is one of the key areas of this program in which the LBM composition and geometry are optimized and the boundary material effects on the tritium production in the blanket module are explored. The concept of employing sintered Li/sub 2/O pellets in tubes is proposed for the blanket design.

24976 **Preconceptual design of a packed fluidized bed blanket for a fission suppressed thorium-fueled CTHR.** Chi, J.W.H.; Karbowski, J.S.; Chapin, D.L. (Westinghouse Electr Corp, Pittsburgh, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1827-1830(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes a thorium-fueled PFB blanket concept for a Commercial Tokamak Hybrid Reactor. A preliminary mechanical concept is presented and the results of neutronics, thermal-hydraulics and economics analyses are discussed. Futher work needed to design and advance the concept is recommended.

24977 **TRACT reactor blanket study.** Wong, C.P.C.; Cheng, E.T.; Creedon, R.L.; Willenberg, H.J.; Zumdieck, J.F.; Hopkins, G.R.; Schultz, K.R. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1855-1858(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents the results of the blanket design of an EPRI-sponsored study for the TRACT reactor to investigate the technical feasibility of building a small fusion commerical power reactor based on the Triggered-Reconnection Compact Toroid (TRACT) confinement concept. Special attention has been given to design areas that are uniquely important to the TRACT reactor as a result of the high maximum neutron wall loading of 37.0 MW/m/sup 2/, the presence of the copper compression coil around the blanket and the requirement for an insulated first wall. The selected blanket, SiC first wall, a water-cooled Li/sub 17/Pb/sub 83b/lanket structure design that supports the cyclic magnet forces, and a PWR type power conversion system. Critical technology issues that are essential for the success of this blanket design are also identified.

24978 **Low activation blanket for the moving ring field-reversed mirror reactor.** Wong, C.P.C.; Cheng, E.T.; Creedon, L.; Hopkins, G.R.; Kessel, C.; Schultz, K.R. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1859-1862(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A low activation blanket for the Moving Ring Field-Reserved Mirror Reactor is presented. It uses SiC as the structural material which eliminates afterheat concerns and allows hands-on maintenance behind the blanket. The ceramic blanket design selected consists of a low pressure ceramic module containing Li/sub 2/O pressurized SiC tubes as the heat transfer element. These tubes penetrate the shield and tritium breeding blanket, and are connected at the back of the shield to a metallic coolant plenum. Ceramic blanket designed can be classified as a low-activation design and can possibly eliminate the problem of reactor afterheat, at the same time fulfilling all the blanket design goals of the MRFRM reactor study.

24979 **Radiation shielding issues on the FMIT.** Burke, R.J.; Davis, A.A.; Morford, R.J.; Huang, S.T. (Hanford Eng Dev Lab, Richland, WA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1916-1919(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Fusion Materials Irradiation Test Facility (FMIT) is being built to study neutron radiation effects in candidate fusion reactor materials. The FMIT will yield high fluence data in a fusion-like neutron radiation environment produced by the interaction of a 0.1A 35 MeV deutron beam with a flowing lithium target. The design of the facility as a whole is driven by a high availability requirement. The variety of radiaton evnironments is the facility requires the use of diverse and extensive shielding. Shielding design without the FMIT must accomodate the need for maintenance and operates access while providing adequate personnel and equipment protection.

24980 **Design of a lithium blanket module for testing in the TFTR.** Homeyer, W.G.; Creedon, R.L.; Yang, L.; Harker, Y. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1988-1991(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A Lithium Blanket Module (LBM) prototypical of a fusion reactor blanket is being designed by General Atomic for testing in the Tokamak Test Reactor (TFTR). Measurements of neutron fluence and tritium production in the module will be compared with the results of analyses to check on the neutronic methods and models to be used to design fusion reactor blankets and blanket modules for long-burn fusion reactors. The program will also provide operating experience in such areas as fabrication of breeding elements and blanket neutron dosimetry.

24981 **Helium-cooled, solid breeder blanket design for a tokamak fusion reactor.** Huggenberger, M.; Schultz, K.R. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1992-1995(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A preliminary design for a helium-cooled, solid breeder blanket for a tokamak fusion reactor has been developed and its performance looks quite good. The design is capable of bearing a 4MW/m/sup 2/ neutron wall load and the ideal pumping power required for the whole primary helium loop including the steam genrators is only 2/5% of the total thermal power. The integrated helium duct work results in a maximum overall thickness of only 86 cm. The design work was focused on the thermal-hydraulic aspects, which represent the key problems associated with using helium as a coolant. The present work demonstrates that the potential disadvantages helium has due to its limited heat transfer capabilities can be avoided or minimized by an appropriate thermal-hydraulic design.

24982 **Proceedings - 9th symposium on engineering problems of fusion research.** Choi, C.K. (ed.). (Univ of Ill, Urbana-Champaign, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2160(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This conference proceedings contains 576 papers, of which 37 appear in abstract form only. Technical coverage is very broad, and concerns topics on plasma engineering, diagnostics, superconductor developments, reactor design, laser applications, computer applications, and future reactor systems. Controls, instrumentation, and data handling were also reviewed at length. 547 papers have been separately abstracted.

24983 **Beginning steps toward fusion technology development.** Kintner, E.E. (US DOE, Washington, DC, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1-4(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The paper reviews the history of fusion technology development, starting from stellarator fusion reactor study led by Lyman Spitzer in 1954. Various fusion related programs initiated, such as: magnets; tritium processing and control; materials; plasma engineering; environment, health and safety; and reactor design and maintenance are discussed. The present status of the program is briefly described.

24984 **Mechanical design of a toroidal divertor for EBT-S.** Malick, F.S.; Brenner, W.C.; Chianese, R.B. (Westinghouse Electr Corp, Pittsburgh, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 76-79(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A novel toroidal magnetic divertor has been designed for the ORNL EBT-S steady state fusion device. The divertor replaces one of the cavities in the twenty-four coil and cavity toroidal array, with only minor modifications to the existing device.

24985 **TMX-axisymmetric magnet set design study.** Wong, R.L.; Chargin, A.K.; Logan, B.G. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 80-82(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Studies are being made to design an axisymmetric modification to the TMX-Upgrade experiment. The existing TMX-Upgrade quadrupole plug and transition magnet sets are replaced by the circular coils of an axisymmetric plug. The existing TMX-Upgrade magnet set is shown. The engineering of any axisymmetric magnet configuration involves the consideration of the points listed in Table.

24986 **Iterative numerical procedure for determining the shape of a constant tension 'D' magnet.** Chianese, R.B. (Westinghouse Electr Corp, Pittsburgh, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 83-86(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The difference between the magnetic fields of a uniformly wound toroid and a sectored toroid leads to somewhat different constant tension shapes. A simple numerical procedure is developed which determines the constant tension shape of a coil from the magnetic forces acting upon it. The method differs from previous techniques in its ability to use numerical field calculations as well as analytical field calculations. Numerical field calculations can be used directly without additional processing steps. The theory developed in this paper calculates the tension in the coil directly from the magnetic forces and refines the coil shape in an iterative fashion. Convergence is rapid and the results compare closely with previous published data. Sample calculations are presented for a pure constant tension shape and a supported constant tension shape.

24987 **Ripple reduction poloidal field coils for tokamak fusion reactors.** Bateman, G. (Ga Inst of Technol, Atlanta, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 87-90(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Ripple Reduction Poloidal Field (RRPF) coils consist of dipole magnetic coils placed above and below the plane of a tokamak plasma in order to produce the vertical and shaping field needed for plasma equilibrium and at the same time to reduce the magnetic ripple from discrete toroidal field (TF) coils. A design is presented which reduces the ripple produced by 8 TF coils with INTOR dimensions from more than 2% to less than 0.1% throughout the plasma. With this design, it is found that the poloidal field from the coils can be adjusted independent of the ripple reduction. Coil currents are found for which there are computed free-boundary plasma equilibria with elongated cross section.

24988 **Evaluation of the use of a normal shield to reduce transient field induced losses in tokamak superconducting coils.** Stekly, Z.J.J. (Magn Corp of Am, Waltham, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 103-106(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The ac losses in the conductor and structural eddy currents are a major cryogenic heat load in Tokamak toroidal superconducting field coils. This paper considers the use of a normal metal shield to reduce the conductor and structure power dissipation resulting from transient magnetic fields. Unless a room temperature shield is used, the power losses in the shield itself represent additional refrigeration capacity which must be taken into account. An analysis was carried out which allowed the power dissipation in the shield to be calculated as a function of shield time constant. It is shown that there is no gain in refrigeration power unless the shield time constant is greater that a certain minimum value. Typical results are presented.

24989 **Magnet system for a thermal barrier Tandem Mirror Reactor.** Kim, N.S.; Conn, R.W. (Univ of Calif, Los Angeles, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 107-110(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The magnet system for a thermal barrier D-D tandem mirror reactor has been studied as part of the UCLA tandem mirror reactor design study SATYR. Three main considerations in designing the SATYR magnet system are to obtain the desired field strength variation throughout the system, to have proper space for plasma and neutron shielding, and to satisfy the MHD stability to achieve maximum central cell /beta/. Due to the importance and the complexity, the 'internal' field reversal magnet is the main concern in the entire magnet system for SATYR. Two different magnet designs, a non-uniform current density solenoid and a higher-order solenoid, are discussed. Coil levitation for the internal field reversal magnet has been analyzed.

24990 **Eddy current load estimation for toroidal shells as a result of plasma disruptions.** Thome, R.J.; Pillsbury, R.D. Jr.; Langton, W.G. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 111-114(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A method is presented for estimating the eddy current induced Lorentz loading on a toroidal shell at $t = 0+$dueto a plasma disruption at $t = 0$. The method assumes that the shell is axisymmetric and has a circular cross-section. The method is applied to a particular tokamak geometry and compared with results obtained using a transient finite element program.

24991 **Model of toroidal magnet systems as orthotropic shells of finite thickness.** Bobrov, E.S.; Schultz, J.H. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 115-118(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A method for analyzing the stresses in toroidal shells of revolution, acted upon by arbitrary force fields, is described. The equations of Reisnner for orthotropic, axisymmetric shells of revolution are derived and solved for finite-thickness toroidal shells. As a design tool for the shape optimization of fusion magnets, such as the in-plane load support systems of toakamaks or bumpy tori, the analytical technique is a major extension of the work of W.H. Gray et al, which solved the stress equation for bending free toroidal shell shapes, subjected to a Lorentz force. The work described below is simultaneously an extension of the theory of shells and an alteration of the perceived 'optimal' shape for tokamak toroidal field magnets.

24992 **Calculation of transient current response of a set of coupled circuits using an eigenvalue technique.** Kalsi, S.S. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 119-122(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The usefulness of a closed form solution obtained by application of an eigenvalue solution method has been demonstrated. These closed form solutions are helpful in identifying peak values of currents, fields, and forces as a function of time. Use of this technique is recommended as much as possible in designing of hardware for tokamaks and other devices.

24993 **Pf coil current sheets for circular section tori to produce specified internal fields.** Thome, R.J.; Langton, W.G.; Pillsbury, R.D. Jr. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 123-126(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Abstract method is presented for determining the distribution of current required to produce any desired magnetic field distribution inside a circular section torus. The field must satisfy Maxwell's equations. The method assumes axisymmetry of the geometry and current distribution. The method for a zero net current flow in the cross-section is presented first. The modifications necessary to impose a nonzero net current are then given. Finally, illustrative examples are presented.

24994 **Analysis of external hybrid poloidal coil system.** Hamada, Y.; Abe, Y.; Kitagawa, S.; Toi, K. (Nagoya Univ, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 127-130(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Analysis of feedback control characteristics in the hybrid poloidal coil system (hybrid of the ohmic and the equilibrium vertical coils) is performed. It is found that, in the complex hybrid poloidal coil system, the plasma can be sufficiently well controlled using very simple equations for the calculation of feedback voltage.

24995 **Generation of multipole nulls in a tokamak geometry.** Kalnavarns, J. (MPB Technol Inc, Ste.-Anne-de-Bellevue, Que, Can). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 135-138(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

For a prescribed location of a poloidal-magnetic-field null on the mid-lane of a coil system in a toroidal geometry, the locus of allowable coil positions and the corresponding currents are calculated analytically. The topology and configurations associated with two coil pairs are examined to give constraints governing the generation of quadrupole, hexapole, and octupole nulls.

24996 **Optimisation of the poloidal field coil system in pulsed tokamaks.** Spears, W.R. (EURATOM, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 146-149(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Reactor studies show that the poloidal field coil system contributes significantly to the overall cost of air-cored pulsed tokamak reactors. Various design options are therefore examined here to provided a basis for optimization. The results show the importance of plasma D-shape, indicate the penalties incurred with discrete coil systems and imply that structural support requirements may be reduced at a cost in increased pulsed fields in the toroidal field coil.

24997 **Normal conducting steady-state toroidal magnet systems for large tokamaks.** Borrass, K.; Soel, M. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 150-153(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Normal conducting steady-state toroidal magnet systems are investigated, emphasis being placed on applications to large ignited tokamaks. The study is based on water-cooled, tape-wound D-coils. The data for the TF magnet systems are calculated in a self-consistent manner with a computer program including the plasma, shield, ohmic heating coil system and geometric requirements for blanket modules, beam ducts etc. An optimization procedure is used to find those TF coil systems which minimize cost-relevant quantities. The results are discussed.

24998 **Eddy current calculations for the tokamak fusion reactor through fields harmonics content.** Denno, K. (NJ Inst of Technol, Newark, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 158-161(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Another Tokamak of analysis regarding eddy current losses within the single Tokamak TFTR at Princeton and the multi-stage EBT at ORNL is presented. In this work comprehensive calculations for eddy current losses in terms of time-varying harmonic content for all the reactor magnetic fields coils system, are established.

24999 **Nonlinear stress analysis of the poloidal field coil for JT-60 tokamak machine.** Miyata, H.; Kojima, H.; Kimoto, H.; Takizawa, T.; Furuyama, M.; Ando, T.; Masuda, M.; Ohkubo, M.; Ohta, M. (Hitachi Ltd, Ibaraka, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 170-173(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The poloidal field coil (PFC) of the JT-60 is a very large scale coil. the coil conductors may be used at high stress level much different from that of usual conductors. In this paper, stress and strain behaviors in the conductor, accompanied by bending work of the PFC and cyclic loading of electromagnetic forces during operation are analyzed using elastic-plastic, large displacement finite element analysis. On the basis of the analytical results, the PFC fatigue strength is evaluated. this enables designing of the PFC with high strength reliability.

25000 **Fatigue design of the poloidal field coil for JT-60 tokamak machine.** Miyata, H.; Kimoto, H.; Kojima, H.; Takizawa, T.; Furuyama, M.; Ohkubo, M.; Ando, T.; Masuda, M.; Ohta, M. (Hitachi Ltd, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 174-177(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

It is necessary for designing the poloidal field coil (PFC) to make confirmation on the reliability of the PFC against its operating loads. This paper deals with the strength analysis and the experimental studies to improve and evaluate the strength for welded

joint. Strength for softened part of welded zone will be improved by pre-work hardening technique which is performed at low temperature of liquid nitrogen. The strength improvement technique is examined and developed for welded zone, and the effect of preworking on the fatigue strength of coil is estimated by experiments. Besides, fatigue crack propagation life is examined on defects in weldment by using the method of fracture mechanics.

25001 **Load tests of a large coil.** Ohkubo, M.; Masuda, M.; Ando, T.; Kawamoto, N.; Nishio, T.; Takizawa, T.; Shizuoka, Y.; Sasajima, H. (Jpn At Energy Res Inst). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 178-181(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

JT-60 is a large Tokamak machine for the investigation of reactor grade plasma. The poloidal magnetic field coil which generates a poloidal magnetic field in a Tokamak is usually operated in a high mechanical stress and a high electrical voltage. Besides, the coil is excited repeatedly with large pulse currents. In order to confirm the reliability of the coil and the validity of the analytical method, the simulated electromagnetic and thermal load tests were performed. Finally, the destructive test was carried out to evaluate the maximum strength of the coil.

25002 **On mechanical stresses in solenoids constructed of transversely isotropic materials.** Gray, W.H.; Cain, W.D. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 182-184(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Equations relating the mechanical stress, strain, and displacement of elastic, axisymmetric solenoid magnets to the solenoid's geometry, current density, magnetic field, and material properties have been derived by several authors. For the special case of rotational transverse isotropy, these equations are singular for certain values of the ratio of the orthotropic elastic moduli. This paper discusses the mathematical conditions for which a singularity of this type exists and presents a general solution to these equations at their singular points.

25003 **Bitter-type magnet plate design with compound conductor of ultrahigh mechanical strength.** Haubenberger, W.D. (Max-Planck-Inst fuer Plasamaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 189-192(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A Bitter-type magnet plate design based on a compound conductor of ultrahigh mechanical strength is described. An explosion-bonded and cold-worked copper-austenite compound is jointed by a special procedure with a soft compound sheet.

25004 **Development of tf coil support concepts by design methodology in the case of a Bitter-type magnet.** Brossmann, U.B. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 193-196(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The application of the methodological design is demonstrated for the development of support concepts in the case of a Bitter-type magnet designed for a compact tokamak experiment@ aiming at ignition of a DT plasma. With this methodology all boundary conditions and design criteria are more easily satisfied in a technical and economical way.

25005 **Structural behavior of the Bitter plate tf magnet for the Zephyr ignition test reactor.** Bobrov, E.S.; Becker, H. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 199-202(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper discusses methods and results of the computer structural analysis of the Bitter plate toroidal field magnet design for the ZEPHYR Ignition Test Reactor. The magnet provides a field of 7.06 T at the center of the bore which is 1.76 m from the major toroidal axis. The ignited plasma is located at a major radius of 1.36 m where the magnetic field is 9.11 T. The plasma is moved to this final position following compression in the major radius. The horizontal bore of the magnet is 1.8 m.

25006 **Missile generation due to electrical arcing in high field fusion magnets.** Schneider, H.; Caretta, A. (Comm of the Eur Communities, Ispra, Italy). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 203-206(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Large amounts of energy (10 /sup 10/-10/sup 11/ J) are stored in the magnetic field of superconducting magnet systems used in conceptual fusion-reactor designs. If only part of this energy is released accidentally, damage to the magnet and to other rector subsystems may result. In fusion-reactor environments it may lead to the evaporation of activated material and to the generation of energetic missiles, involving interference with sources of radioaactive material in the plant. Results from a Runge-Kutta routine have been obtained for FINTOR, a minimum size Tokamak DT experimental reactor, indicating that missiles of about 20 kg weight may reach velocities in the order of 100 m/s.

25007 **Electrical insulation qualification tests for TFTR TF and PF coils.** Johnson, H.G.; Alton, R.J. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 208-211(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper summarizes the electrical insulation tests required for in-process and final manufacture acceptance of the TF and PF magnetic field coils. The testing equipment and general test procedures used by the various coil manufacturers are described. The results of dc and ac high potential, corona (partial discharges), dielectric loss and impulse tests of the coils manufactured to date are summarized.

25008 **Selection and application of C18200 chrome copper for the OHTE confinement test helical coil.** Puhn, F.A.; Graumann, D.W. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 213-215(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The selection and qualification of copper for the OHTE confinement test helical coil (H-coil) was a crucial step in the success of this new experiment. Previous problems encountered at General Atomic Company with close tolerance machined parts made from high strength copper were identified. The design criteria included selecting a material with minimal warpage during machining, an electrical conductivity >80% IACS, and a yield strength of at least 241 Mpa (35 ksi). The investigation of candidate materials and testing samples led to selection of a material that fully met all requirements. The C18200 chrome copper forged plates were supplied by the Ampco Metal Division of Ampco-Pittsburgh Corporation.

25009 **Cryogenic voltage withstand and heat transfer tests for the General Electric large coil turn heaters.** Schwenterly, S.W.; Fitzpatrick, C.M.; Court, W.R. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 260-264(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In order to assess the stability of the various Large Coil Program concepts, each of the three U.S.-made coils incorporates heaters to create a normal zone in the conductor. Based on results of finite-element heat transfer calculations, voltages in the neighborhood of 1 kV are needed to supply the required power over a half-turn. By comparing the results with room-temperature tests on the same or similar samples, a room-temperature production hi-pot test can be specified which gives confidence that the heaters will per-

form properly at low temperature but which is not severe enough to damage them. By measuring the conductor temperature during a heater pulse, the validity of the heat transfer calculations can also be checked.

25010 **Two-phase helium-IV quench analysis for superconducting magnets.** Byington, G.A.; Shipley, W.D.; Ryan, T.L. (Union Carbide Corp, Oak Ridge, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 273-276(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The sizing of a coil venting system to ensure that the coil cavity design pressure is not exceeded during a quench is a critical part of any superconducting coil design. This paper describes the calculations performed by this computer program to analyze the two-phase venting of the helium coolant during a superconducting coil quench. The coils being analyzed are a pool boiling, superconducting magnet for the Large Coil Program.

25011 **Pool boiling helium heat transfer from two large monolithic copper stabilizers.** Peck, S.D.; Christensen, E.H. (Gen Dyn, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 277-280(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The heat transfer performance of two large, monolith, pool-boiling conductors designed for 12 Tesla service in Tokamak field coils has been measured in simulated vertical-axis conductor packs. The surface heat flux of a shallow, rectangular-grooved conductor was 15% lower than that of a simple rectangular conductor in temperature regimes of cryostability interest. However, the wetted surface area enhancement provides overall heat transfer for the grooved surface of about 2.1 times that of the flat surface. The data for the conductors away from the magnet wall agrees closely with design analysis predictions for both conductors and verifies their predicted cryostability performance. Effects on cryostability performance of two insulation systems made by molding processes and incorporated with these two conductors have also been determined.

25012 **EBTR magnet design.** Lieurance, D.W.; Bathke, C.G. (Gen Dyn, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 281-284(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Engineering design proposed for the aspect-ratio-enhanced Elmo Bumpy Torus Reactor (EBTR) is presented. After a summary of the constraints and design philosophy that have directed this task, a general description of the EBTR magnet system is given. That is followed by a substem-by-subsystem description of the toroidal field/aspect ratio enhancement coil set and its supporting electrical system.

25013 **Finite element analyses and instrumentation layout for the superconducting test facility TOSKA.** Zehlein, H.; Dolensky, B.; Krauth, H.; Messemer, G.; Ulbricht, A. (Kernforschungsvent Karlsruhe, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 293-296(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the layout of the instrumentation for the superconducting test facility 'TOSKA' based on the results of a finite element modelling of the EURATOM coil for the IEA Large Coil Task. Three types of data are of interest: deformation, material properties and mechanical interaction between coil components. Particular aspects of coil support and possible constraints against undesired deformation are discussed in some detail. Sensor properties and locations are explained.

25014 **Superconducting ohmic heating solenoid concept for ISX-C.** Shen, S.S.; Brown, R.L.; Gray, W.H.; Lubell, M.S. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 297-300(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The employment of a superconducting ohmic heating solenoid is presented for ISX-C based on currently available superconducting technology. The magnet is designed to be cryostable and to generate the required flux swing of 4.5 V/s while simultaneously meeting the limitations imposed by available space and structural interfacing to the torroidal coils. A novel spliceless pancake winding scheme is proposed which offers excellent cooling and completely supports the cable conductor throughout the winding.

25015 **Safety implications of shorted turns in superconducting magnets for fusion.** Turner, L.R. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 301-304(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A Computer Code SHORTURN has been developed to analyze the thermal and electrical behavior of a shorted turn of a cryostable superconducting magnet when the magnet is discharged. The code, a modification of the code TASS, performs the thermal analysis of a heat balance using the back-difference method, and the electrical analysis semi-analytically. An LCP TF coil and the OH solenoids of FED and INTOR have been analyzed; the peak temperature and peak current are given as functions of short resistance and coil discharge time.

25016 **Acoustic emission triangulation of mechanical disturbances in superconducting magnets.** Tsukamoto, O.; Steinhoff, M.F.; Iwasa, Y. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 309-312(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An acoustic emission (AE) technique is being developed to locate sources of mechanical disturbances, particularly of conductor motion, in superconducting magnets. This paper presents preliminary results from two large magnets: (1) a high-current density dipole for high-current density dipole for high-energy physics application and (2) a 'stable' saddle magnet for MHD application.

25017 **Comparison between experimental and analytical winding prestrain for a circular solenoid.** Gray, W.H.; McManamy, T.J.; Ballou, J.K.; Brown, R.L. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 316-319(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A series of practice winding experiments were done during the winding of the development magnets for ELMO Bumpy Torus Proof-of-Principle (EBT-P - a large, experimental fusion device using 36 superconducting mirror magnets). The experimental method involved layer winding conductor on the bobbin and monitoring the hoop strain accumulation on the inside of the bobbin's bore tube and thus inferring the effectiveness of winding tension as a means of controlling operational stress levels within the magnets. The experiments were done with bare conductor and with several types of spiral wrapped insulation on the conductor. Good agreement between experimental data and a computational stress model was obtained. The effect of time-dependent viscoelastic material behavior was observed.

25018 **Coil performance test of nb/sub 3/sn conductor to be used in the advanced cluster test facility.** Ando, T.; Takahashi, Y.; Nishi, M. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 320-323(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

One double-pancake test coil has been constructed and tested to study the performance of stabilized multifilamentary Nb/sub 3/Sn conductor to be used in the cluster test back-up coils (CBC). This double pancake has an inner diameter of 40 cm and an outer diameter of 84 cm. According to present plans, a CBC will be at-

tached to each of the present cluster test coils in the cluster test facility in order to increase the background field at Test Module Coil II. A stability test was carried out using attached heaters. The experimental results can be explained by the heat condition equation, after taking into consideration the heat transfer from neighbouring conductors.

25019 **Manufacture of 16,000 amp superconducting conductor for the tokamak toroidal field coil program.** Hamilton, W.C.; Carr, S.L.; Declercq, J.G.; Lincoln, R.W.; Pollock, D.A.; Zeitlin, B.A. (Intermagn Gen Corp, Guilderland, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 324-327(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Intermagnetics General Corporation recently completed a 3-year contract to manufacture 7,340 meters of superconducting conductor to be used in the General Electric Large Coil, one of six superconducting toroidal field test coils for experiments to support magnetic fusion research which will be performed at the Oak Ridge National Laboratory. This paper describes the special manufacturing techniques developed to form the superconducting wire into a square cross section, tin it with solder, and then solder it into the 'U'-shaped copper stabilizer. The soldering equipment and techniques developed to bond the subelement to the core are also discussed.

25020 **Origin of resistive voltage and the related problems in large-capacity Nb_3Sn conductor.** Furuto, Y.; Tanaka, Y.; Meguro, S.; Suzuki, T.; Inoue, I. (Furukawa Electr Co, Tokyo, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 330-334(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper deals with the systematic analyses and considerations on various types of voltage-current characteristics in large-capacity Nb_3Sn superconductors--typically of a few thousands amperes and of cross-sectional area of several tens squared milimeters. The fundamental conclusions are summarized for three cases as follows: For the first case in which current-transfer effect is dominant, in order to determine the critical current, deceptive voltage originating from the current-transfer across the matrix metals must be excluded before applying usual definition such as effective resistivity of 10^{-13} /OMEGA/For the second case in which cracking or some fracture occurs in the superconductor, conventional definition of critical current can be reasonably applied because other effects are covered with fracture-induced large voltage. For the third case, ordinary one, in which current-transfer and strain effects exist simultaneously, the same procedure as the first one should be applied. The degradation of critical current due to strain effect can be evaluated by this method.

25021 **Description of the molding system for the epoxy impregnation of the TFTR poloidal field coils.** McDade, J.C.; Dudek, L.E. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 335-338(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR Poloidal Field (PF) Coils are a system of coils located outside the Toroidal Field Coils. They provide both ohmic heating and magnetic fields for positioning the plasma. This paper describes the method used to epoxy impregnate the large PF coils. The stack is now ready to be impregnated. The TFTR specification calls for the coils to be impregnated with epoxy under vacuum and then pressurized until the epoxy resin is cured.

25022 **Design characteristics of the TFTR sector module (I).** Stern, E.; Carguilia, G.; Spinos, F.; Sabado, M.M. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 342-345(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Tokamak Fusion Test Reactor (TFTR) employs a modular concept to assemble the machine's major components. A Sector Module is defined as a subsection of the Vacuum Vessel/Toroidal Field (TF) Coil Assembly consisting of a one-tenth segment of the vacuum vessel, two TF coils and four shear/compression panels (SCPs). It is not the intent of this paper to present the aspects of each component of the Sector Module but to focus primarily on the TF coils and SCP's. The paper addresses the design to tolerancing, machining, and assembly/installation of these components to achieve the proper load sharing within the Sector Module concept.

25023 **Development of TFTR sector module assembly procedures (II).** Stern, E.; Carguila, G.; Spinos, F.; Sabado, M.M. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 346-349(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Tokamak Fusion Test Reactor (TFTR) employs a modular concept in the design and assembly of the machine's major components. A Sector Module consists of a vacuum vessel segment, two torroidal field coils with their stainless steel cases, four shear compression panels (SCP's) and two pedestal assemblies. Although not a part of the Sector Module, the Inner Support Structure (ISS) or bucking cyclinder, is an important element in the load reaction scheme of the module and plays a major role in the development of installation concepts. Only the TF coil, SCP and ISS installation are discussed in this paper.

25024 **Thermal design considerations of shields for levitated coils.** Grotz, S.P. (Univ of Calif, Los Angeles, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 354-357(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Thermal response analysis of shields for levitated coils has been conducted. Minimizing the rate of temperature increase in the superconductor was the primary concern. Initial analysis of a reference case has shown that, with constant thermal properties, the superconductor temperature remains below 12 Kelvin for approximately 45 days. Thermal degradation of the super insulation occurs after only approximately 5 days resulting in faster thermal response of the superconductor. Parametric analysis such as addition of a heat sink and larger high temperature insulation zones has been investigated with regards to limiting super insulation degradation and superconductor temperature increases. The final shield design can operate for approximately 2 weeks with a thermal recycle time (cool down) of 1/2 to 1 day.

25025 **Enhanced cooling with helium channels in the TF coil casing for FED.** Srivastava, V.C. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 358-361(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The toroidal field (TF) coil casing in a tokamak is subjected to high nuclear heating along the vertical straight leg of the TF coil and locally high eddy current heating in the vicinity of the D-shaping poloidal field (PF) coils. Liquid helium channels are incorporated in the TF coil casing to intercept these local heat loads before they are transmitted to the winding and jeopardize the winding stability. The proposed cooling channels for FED operate at 4 K in the coil case and at 20 K in the intercoil support structure. The refrigerator capacity is reduced significantly by removing the intercoil support structure losses at higher temperatures. The performance and design of these cooling channels for FED TF coils are discussed in this paper.

25026 **TEXT poloidal field power systems operation.** Nelin, K.; Hutchins, H.S.; Kellogg, J.C. (Univ of Tex, Austin, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 362-365(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Texas Experimental Tokamak (TEXT) has been operational since November of 1980. It has been running consistently since August 1981 with a 300 kA plasma current flat top. Plasma parameters from a typical shot are shown. Start-up and operation of the machine is described in a separate paper. All units are now on line and operating within design parameters. Initial testing and changes necessary to assure specified performance is described. Discharge cleaning is employed in order to minimize vacuum system contamination. The optimized characteristics of this process are described.

25027 **TEXT toroidal field power supply operation.** Brower, D.; Harris, H.W.; Nelin, K.; Hutchins, H.S.; Wildi, P.; Cox, J.; Ross, H.P. (Univ of Tex, Austin, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 366-369(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the circuit modifications and operating experience encountered during power up tests and acceptance of the thyristor controlled power supply for the toroidal field coils of the Texas Experimental Tokamak (TEXT) which is now in full operation at the Fusion Research Center of the University of Texas at Austin.

25028 **Installation and operation of the motor-generator for the TEXT.** Wildi, P.; Brower, D.; Harris, H.W.; Elliott, L.C. (Univ of Tex, Austin, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 370-373(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the general features, installation and operation of the 185 MJ (stored energy) motor generator to provide pulsed power for the Texas Experimental Tokamak (TEXT) at the Fusion Research Center of The University of Texas at Austin. The motor generator will deliver a pulse of four seconds duration every two minutes at a peak power of 100 MVA and 6.9 kV to operate the toroidal field and ohmic heating power supplies. Machine output characteristics are compared with design characteristics. The performance of the machine on the power system which has limited power capability is described as well as modifications made to avoid overpowering the system. The motor-generator has been in service since April 1980 and the performance with the toroidal field and OH poloidal power system is described.

25029 **Magnetizing circuit of TEXTOR.** Braunsberger, U.; Lochter, M.; Weigand, W. (Tech Univ, Braunschweig, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 411-415(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The magnetizing circuit is that part of the Tokamak TEXTOR which biases the iron core of the ohmic heating transformer and generates the loop voltage for plasma breakdown. In this paper the various operational modes of the TEXTOR magnetizing circuit are explained, the components are described, and results from a test program are given.

25030 **Energy dump concept for large energy storage coils.** Eyssa, Y.M.; McIntosh, G.E.; Hilal, M.A.; Khalil, A.; Nilsson, B. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 456-459(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A scheme to internally dump all the energy stored in a large superconducting energy storage coil in an emergency situation is described. The magnet is a 1000 MWh single layer solenoid cooled by superfluid helium. The dump concept involves dumping the helium into a cooled reservoir, shorting all the turns and the cold structure, and triggering the first few top turns normal by means of an attached heater. This concept insures a uniform final temperature in the winding and the structure. The voltage distribution across the coil during the dump time is also discussed.

25031 **Analysis of field error criteria in an EBT reactor.** Uckan, N.A.; Swain, D.W.; Lee, D.K.; Uckan, T.; Owen, L.W.; Gordinier, M.R. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 467-470(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A closed field line device, such as an ELMO Bumpy Torus (EBT), is very sensitive to small perturbations in the magnetic field. The estimates of the maximum tolerable field errors (/delta/B/B) for an EBT reactor are derived. Numerical calculations of field errors due to single coil misalignments indicate that the field line closure is most sensitive to angular misalignment of the coils. Statistical analysis of errors from N coils, assuming the errors in all N coil alignments are randomly distributed in a Gaussian fashion, is found to be in reasonable agreement with the numerical calculations.

25032 **Status of the magnet systems and highlight of the main assembly problems.** Salpietro, E.; Huguet, M.; Last, J.R.; Pohlchen, R. (JET Jt Undertaking, Abingdon, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 519-522(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The JET magnetic system has been already described is several other reports. In this report only a concise description of the components and its construction is discussed. It also highlights the major assembly problems envisaged at this moment for the assembly of the JET device. The three main components of the magnetic system discussed here are: poloidal field system, toroidal field system and mechanical structure.

25033 **Engineering feasibility challenges for the magnet community.** Montgomery, D.B. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 523-527(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The magnetic Fusion Energy Program will enter a period of renewed activity during the next decade. It must face the dual challenges associated with a major new emphasis of Fusion Engineering on the one hand, and on the other, a renewed exploration of emerging advanced toroidal and mirror concepts most suitable for future reactors. This program presents particular challenges for the magnet community, and is the focus of this review.

25034 **Engineering design and construction of the S-1 spheromak coil systems.** Heitzenroeder, P.J.; Helmich, R.C.; Pereira, M.A.; Loesser, G.D. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 535-538(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Spheromak coil systems consist of a torus-shaped flux core of 1 m. major radius located within the vacuum vessel, and three pairs of euqilibrium field (EF) coils located outside the vessel. The engineering design and fabrication methods of these coil systems are the topics of this pper. Toroidal and poloidal currents are induced by the PF (poloidal field) and TF (toroidal field) windings, located in the flux core. The windings are made of water-cooled copper cables located in grooves in and around a G-10 epoxy-glass torus form.

25035 **Structural design procedures for FED magnets.** Hooper, R.J.; Hunter, B.L. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 539-542(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Structural design criteria developed for toroidal and poloidal field coils in the Fusion Engineering Device (FED) are discussed; also considered ar e the structural consequences of operating the coils for a portion of their design life at elevated field levels. The structural design procedure incorporates primary stress limits to provide a margin against large-scale yielding or rupture due to

gross overloading. In addition, the growth of a flaw in the structural material (due to pulsed loading), followed by fracture, is considered. The structural design procedure requires that both stress limits be satisfied.

25036 **Pool boiling superconducting coils for the Large Coil Task.** Luton, J.N. Jr.; Kruse, G.S.; Linkinhoker, C.L.; Shimamoto, S. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 547-551(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The United States and three other members of the International Energy Agency have entered into an agreement for the fabrication of 2 1/2 x 3 1/2-m bore model superconducting coils and their testing in the Large Coil Test Facility under construction at the Oak Ridge National Laboratory. The six coils, three produced in the U.S. and three in other countries, are to be tested together in a compact torus, and are supposed to meet the same performance criteria. However, they are designed differently, with the expectation that several designs will be proven suitable for producing DC confinement fields for tokamak fusion reactors. The first three coils to be completed will employ NbTi conductor cooled by baths of boiling helium. This paper gives an overview and comparison of these three designs, describes some of the verification testing and the incorporation of the results into the designs, discusses some of the unexpected fabrication difficulties and their resolutions, gives the fabrication status as of October 1981, and refers to the literature describing the coil efforts in greater detail.

25037 **International tokamak reactor conceptual design overview.** Stacey, W.M. Jr. (GA Inst of Technol, Atlanta, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 556-559(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The International Tokamak Reactor (INTOR) Workshop is an unique collaborative effort among Euratom, Japan, the USA and USSR. The Zero-Phase of the INTOR Workshop, which was conducted during 1979, assessed the technical data base that would support the construction of the next major device in the tokamak program to operate in the early 1990s and defined the objectives and characteristics of this device. The INTOR workshop was extended into phase-1, the Definition Phase, in early 1980. The objective of the Phase-1 Workshop was to develop a conceptual design of the INTOR experiment. The purpose of this paper is to give an overview of the work of the Phase-1 INTOR Workshop (January 1980-June 1981, with emphasis upon the conceptual design.

25038 **INTOR physics.** Schmidt, J.A. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 564-568(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The overall INTOR size and magnetic field parameters have been established as part of the INTOR transport modelling program. These studies, based on the presently accepted transport coefficients, have established the INTOR ignition margin and overall INTOR performance. Divertor modelling studies have focused on the performance of the INTOR poloidal field divertor. These studies have shown that the neutrals are confined to the divertor channel, thereby limiting the charge exchange erosion of the first wall. The strong cooling produced by the neutrals reduces the ion temperature in the divertor. The impurities eroded from the divertor plate have a low probability of entering the main discharge.

25039 **Magnet design for INTOR.** Hunter, B.L. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 582-585(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The INTOR Phase 1 Design Study was concluded in June 1981, with a technical review of and concurrence with the final draft of the INTOR conceptual design report by the four INTOR Program delegations - EURATOM, Japan, U.S.A., and the U.S.S.R. The conceptual design report will be edited and publiched in the fall of 1981 by the IAEA in Vienna. This paper describes the magnetic systems - toroidal field and poloidal field - for the INTOR conceptual design.

25040 **Lorenz force induced strand motion in a superconducting cable.** Maeda, H.; Maguire, J.F.; Tsukamoto, O.; Maguire, J.F.; Tsukamoto, O.; Tamada, N.; Iwasa, Y. (Toshiba Corp, Kawasaki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 623-626(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Lorentz force induced strand motion in a superconducting cable was investigated by a combined technique of voltage and acoustic emission measurements. Both types of motion, elastic (non-dissipative) and dissipative, were observed. Energy released in the dissipative motion is estimated.

25041 **Studies on stability and a.c. losses of filamentary conductors for fast ramp rate ohmic heating coils.** Ogasawara, T.; Kubota, Y.; Makiura, T.; Akihama, R.; Yasukochi, K. (Nihon Univ, Tokyo, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 627-630(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The ohmic heating coils in a typical design of tokamak fusion reactors are needed to provide time varying field with a maximum of about 7T and a field ramp rate of 10 T/sec. The purpose of this work is to investigate a.c. losses and stability of NbTi multifilamentary composite conductors when they are carrying transport currents and exposed to rapidly rising fields: The maximum of field ramp rate was about 200 T/sec.

25042 **Persistent resistive regions and cryogenic stability of composite conductors: effect of cooling spacers.** Hilal, M.A. (Mich Technol Univ, Houghton, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 631-634(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Conductors cooled by liquid helium are either placed in grooves or separated by spacers and heat generated in the conductors is removed by the adjacent liquid helium channels. In the absence of cooling spacers stable temperature distribution exist only if the equal area criteria is satisfied. In the presence of spacers, many steady state temperature distributions are possible and persistent resistive regions can exist along the conductor. It is shown in a previous study that persistent resistive regions can also exist due to conductor delamination. The similarity between the two cases can be seen if the conductor is considered as a composite delaminated from zero cross sectional area stabilizer. The effect of spacers on current recovery was also studied by Meuris et al and Seyfert. et al Approximate analysis based on a simple model are discussed in detail in this paper. Sample results and brief discussion of more general model are also presented. Details of the general model will be published elswhere.

25043 **Development of superconducting poloidal field coils for tokamak reactors.** Kim, S.H. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 635-639(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Poloidal field (PF) coils in tokamaks are required to induce and initially heat the plasma as well as to stabilize it in an equilibrium position. The primary need for superconducting PF coils of subdivided high currents cable is to minimize the charging and discharging voltages and to reduce the ac losses during pulsing cycles. In this paper, pulsed coils developed or under development are briefly described to realize that the present effort is insufficient for the design of near future tokamak reactors.

25044 **Design of a superconducting 20 MJ induction coil.** Singh, S.K.; Jarabak, A.J.; Ibrahim, E.A.; Davis, J.B.; Gaberson, P.C.; Rogers, J.D.; Thullen, P.; Walker, M.S. (Westinghouse Electr Corp, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 644-647(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents the results of the detailed design and analyses of the 20 MJ superconducting induction heating coil. The coil is designed to store 20 MJ at 50 kA. The superconductor material is NbTi for a 7.5 tesla maximum field. The coil is designed to survive at least 100,000 cycles of full bipolar half cycle sinusoidal operation from +7.5 tesla to -7.5 tesla fields in one second. The analysis shows that the coil design will meet or exceed all of the performance requirements. The coil is designed to be mechanically rugged and manufacturable.

25045 **Engineering, testing and manufacturing the general dynamics test coil for the Large Coil Program - an update.** Hackley, D.S.; Kruse, G.S.; Walker, D.L.; Mulroy, R.T.; Bailey, R.E.; Nash, D.R. (Gen Dyn, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 648-651(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

General Dynamics has reached the final stages of producing the magnet for the Large Coil Program (LCP). All superconductor and structural details have been completed along with the bobbin. Grade I and II conductor is complete and Grade I has been wound. Outer ring, torque box, and post-key subassemblies are welded and being readied for coil closeout. This article describes steps forward superconductor selection and manufacture, coil winding and structure.

25046 **Superconducting poloidal field coil studies for INTOR.** Turner, L.R.; Kim, S.H.; Smith, R.P.; Hunter, B.L.; Alcorn, J.S. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 756-759(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The U.S. INTOR team invested considerable effort in superconducting poloidal field (PF) coil studies, relating them to ongoing development programs for pulsed superconductors. A 50 kA Los Alamos National Laboratory (LANL)-type conductor was chosen as reference conductor, with a 100 kA conductor with surrounding channel support chosen as backup. Four distinctive features of the U.S. INTOR design are: (1) a PF coil system asymmetric about the midplane, resulting from the single-null divertor and the off-center plasma, (2) a central solenoid with separate segments for ohmic heating (OH) and equilibrium field (EF), (3) ring coils with combined OH and EF function, each with its own time history, and (4) ring coils mounted outside, but very near, the toroidal field (TF) coils. The force analysis must be carried out for all times of the cycle, and must include the fringe field from the TF coils. The forces on the ring coils can be reduced greatly, at little added expense, by moving the PF ring coils further from the TF coils.

25047 **Considerations for replacing PF coils on FED.** Spampinato, P.T. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1150-1153(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The poloidal field (PF) coil system for FED is designed for the life of the device. This paper describes the maintenance and disassembly procedures of the PF coil system for the FED Reference Configuration. The major steps involved in disassembling and handling the coils are presented, along with estimates of device downtime and an assessment of the mode of operations, i.e., contact, remote, or automated.

25048 **Soldering studies of an aluminum stabilized superconductor.** Hartwig, K.T.; Yu, D.; Zolliker, P. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1330-1332(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Soldering experiments are performed to determine a good solder composition and the best method of joining pure aluminum to multifilamentary NbTi superconductor wire. Solders containing Zn are found to severely embrittle aluminum during the soldering operation. Standard Sn40Pb and Sn50In solders as well as pure Sn, Bi, and Pb are not found to be embrittling. Of the methods tried for joining short lengths of composite wire, bath soldering is found to be more effective than joining electroplated aluminum. Ultrasonics holds promise for adaptation to the bath method.

25049 **Production experience: the Nb/sub 3/Sn forced flow conductor for the Large Coil Program.** Sanger, P.A.; Adam, E.; Grabinsky, G.; Gregory, E.; Ioriatti, E.; Roemer, F. (Airco Superconduct, Carteret, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1333-1336(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Nb/sub 3/Sn forced flow conductor for the Large Coil Program is a large extrapolation for several new superconducting technologies. The first area of development is the production of 12 tons of 0.7mm diameter multifilamentary Nb/sub 3/Sn wire. Reproducible superconducting properties and long piece lengths (up to 10,000 meters) have been achieved. The upgrading of normal welded tube mill practices to produce over 5km of defect-free, helium leak tight, welded tubing is another area where innovations have been necessary. The procurement and use of a special high strength and weldable alloy was required. Special leak checking techniques capable of measuring a leak of 10-/sup 14/ std. m/sup 3//s of helium have been developed. The lessons learned and the results obtained are discussed in this paper.

25050 **Torus design for the fusion engineering device (FED).** Kirchner, J.; Fuller, G.M. (McDonnell Douglas Astronaut Co, Oak Ridge, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1451-1454(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The torus of the Fusion Engineering Device (FED) provided a plasma chamber with the required vacuum integrity and nuclear shielding to protect personnel and to limit damage to sensitive components. The torus spool is the primary load-carrying structure and serves as the vacuum enclosures on the top, bottom, and inboard wall. A combination of the shield sector outer surface, a bellows seal systems, and the spool comprises the total vacuum system boundary. The inboard shield thickness of 60 cm is sufficient to meet the FED requirements to limit the heating rate in the inboard leg of the TF coils to 5 mW/cm/sup 3/. The 1.2-m-thick outboard shield meets the requirements of limiting personnel exposure to 2.5 mrem/h 24 hours after shutdown from 8-T operation or 2.5 mrem/h 36 hours after shutdown for a limited number of 10-T shots.

25051 **Tests of the first development coils for EBT-P.** Miller, J.R.; Lue, J.W.; Shen, S.S. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2012-2015(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Two superconducting coils have been built and tested as part of a development program aimed at proving the technology for production of a 36-coil TOROIDAL set for the Elmo Bumpy Torus Proof-of-Principle (EBT-P) machine. Both coils have demonstrated the capability of being charged reliably and rapidly for essentially continuous operation with simulated x-ray heat loads in excess of 10 W has also been demonstrated in both coils.

25052 **Argonne pulsed cable test facility for the development of superconducting ohmic heating coils.** Kim, S.H.; Krieger, C.I.; McGhee, D.G.; Turner, L.R. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2016-2018(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A Pulsed Cable Test Facility (PCTF) under development at Argonne National Laboratory (ANL) is described. A split-pair pulsed superconducting coil, which is the central feature of the PCTF, has been tested. Other facilities for the PCZTF are a nonmetallic cryostat, a 7-MW pulsed (2.9 MW rms) power supply for the pulsing of the split-pair coil, and a 50-kA, 5-V dc power supply for charging the testing pancake coils. Cable fabrication for the split-pair coil, winding of the coil, and initial test results of the coil are described.

25053 **Latest status of the Japanese LCT coil and the domestic test facility.** Shimamoto, S.; Ando, T.; Hiyama, T. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2019-2022(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Japan Atomic Energy Research Institute (JAERI), representing Japan, is now making one of six test coils for the International Energy Agency's (IEA) Large Coil Task(LCT). The Japanese LCT coil, which has a stored energy of 120 MJ, is based on a NgTi conductor, is pool-cooled, has a maximum field of 8T, and is edgewise, double-pancake wound, was completed in October, 1981. The LCT coil will be tested in the newly constructed domestic test facility up to its rated current in November, 1981, before transportation ORNL. The domestic test facility, which is composed of a cryogenic system a vacuum system, a power supply with protection system, and a data acqusition and control system, was completed and its performance measured at a new building for the LCT test at JSAERI in June, 1981. This paper describes the latest construction status of the Japanese LCT coil and the domestic test facility. The performance of the domestic test facility is described in this paper.

25054 **Results of the cooldown analysis of the Swiss LCT coil.** Marinucci, C.; Weymuth, P.; Vecsey, G. (Swiss Inst for Nucl Res, Villigen, Switz). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2023-2026(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Cooldown of the Swiss LCT coil from 300K to 4K is analyzed with a 2-dimensional heat conduction code applied to two perpendicular planes. A dynamic model to simulate the change of helium temperature during coldown is included. Results show that the coil can be cooled down in approx. 140 hours without critical temperature gradients in any of its components.

25055 **Progress renort on the tandem contribution to the IEA Large Coil Task.** Krauth, H.; Nyilas, A.; Ulbricth, A.; Zehlein, H.; Albrecht, C. (Kernforschungszent Karlsruhe, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2027-2030(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The European LCT-coil is presently in the manufacturing phase. This paper describes the present status with special emphasis on testing and quality control as they were performed in the design phase and as they are planned during the manufacturing phase as well as with the completed coil. The final design of the coil is presented as it looks after some changes introduced by the results of verification testing. Practice windings and impregnation test of dummy winding packs were performed to verify the manufacturing concept. Prototype of all essential coil components were produced and are presently being tested. Quality control plans were worked out for the fabrication of conductor, coil winding and coil case. After a final warm check of the coil at the manufacture site, the coil will be tested as a single COIL in the TOSKA facility to prove acceptance, gather cryogenic experience and assure reliable coil performance.

25056 **Advances in the cluster test facility and the test module coil development.** Shimamoto, S.; Ando, T.; Hiyama, T. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2031-2034(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Cluster Test Facility was constructed at the Japan Atomic Energy Research Institute (JAERI) to aid the development of superconducting tokamak toroidal coils. The Cluster Test Coils, constructed in 1980, are 20-MJ, NbTi, pool-coils. The Cluster Test Facility has already been operated twice. During the first operation in August, 1980, several technical problems were found. Thereafter, several improvements in the system were carried out, and a second operation was undertaken in April, 1981. The substantial effects of the improvements were revealed during this operation. This paper describes the results of the improvements and the advances in fabrication of the test Module Coil which will be tested in the facility.

25057 **Large-current conductor development for superconducting poloidal coils.** Tsuji, H.; Takahashi, Y.; Okuno, K. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2035-2038(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

For the development of superconducting tokamak poloidal coils, technical objectives and a concept for the development work are discussed. Based on the development program of large-current poloidal conductors, the Japan Atomic Energy Institute (JAERI) developed two pool-cooled 10-kA poloidal conductors (JA-10, JB-10) whose characteristics were measured. Based on these experiences, development of three conductors was started. These are a 50-kA pool-cooled flat-core conductor (JA-50), a 50-kA pool-cool cable-in-conduit (JF-50). Design parameters and characteristics of these conductors are described.

25058 **Shaping and controlling Dee-shaped tokamak plasmas.** Shinya, K.; Yokomizo, H.; Ninomiya, H.; Nagami, M.; Shimada, M.; Yoshida, H.; Izumi, S.; Ioki, K.; Kitsunezaki, A. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2039-2042(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A multipole field analysis of the equilibrium magnetic field was systematically carried out for various plasma shapes, positions and parameters. The hexapole field is proportional to the triangularity which enables easy control of the triangularity while the dipole of the independent of it. The elongation dependence of the quadrupole field is almost linear at low elongations the controllability of the elongation. Both the quadrupole field and the dipole field should be increased as /beta/sub //p increases, while the hexapole field should be decreased for a fixed plasma shape.

25059 **Development of large-scale thyristor dc circuit breaker.** Kobayashi, S.; Tanoue, Y.; Ikegame, H.; Matushita, T.; Sato, Y. (Toshiba Corp, Tokyo, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 378-381(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A study for developing a thyristor dc circuit breaker that is applicable to the Tokamak device for engineering feasibility is presented. The design and test of a unit circuit breaker consisting of 4kV-3kA thyristors connected 2 in series and 12 in parallel are described. And based on the results a 50kV-24kA thyristor dc circuit breaker is conceptually designed.

25060 **Design, fabrication and erection of flywheel-generator-convertors for the JET tokamak.** Huart, M. (JET Jt Undertaking, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 382-385(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The JET Power Supply Scheme relies on a combination of generator-convertors and mains driven transformer-rectifiers to supply power to the four major pulse loads, namely the toroidal field coils, the poloidal field coils, the plasma positioning coils and the additional heating. This paper describes the main characteristics of the mechanical and electrical design of the generators and the sequence of erection of the generators. It concludes with a review of the present status of the erection program.

25061 **JET ohmic heating circuit.** Helgesen, H.; Mondino, P.L.; Raymond, C.; Stella, A. (JET Jt Undertaking, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 386-389(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the JET Ohmic Heating Circuit - a switching network in the Poloidal System of the JET Machine - that connects the driving energy source to the JET Torus to induce and maintain the plasma current. The sequential operation, including the protective action, is described. The basic design aspects for all components are reviewed and the status of manufacture and procurement presented. The components will be installed in 1982 and the whole system will be commissioned under CODAS remote control to be ready by Spring 1983.

25062 **Poloidal-field thyristor amplifier with improved power factor, for TEXTOR.** Lisser, J.; Bouwknegt, K.; Giesen, B.; Petree, F. (Holec Mach and Syst, Hengelo, Neth). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 390-393(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Rapid current control in highly inductive poloidal-field coils requires a regenerative converter whose output voltage is many times larger than the drop across the ohmic resistance. During the flat-top phase of the current pulse the converter is phased back, resulting in a relatively large ripple and high reactive power. Controlled freewheeling, using thyristors between the d.c. terminals of the three-phase thyristor bridge and the neutral of the transformer winding, improves the output waveform and reduces the reactive power drawn from the mains without reduction of the dynamic performance. This circuit is used in two 12-plus thyristor amplifiers 2500 V-15 kA for the vertical field and for ohmic heating in the Euratom/KFA-Juelich Textor experiment.

25063 **Commissioning tests for the TEXTOR toroidal field power supply system.** Giesen, B.; Petree, F.; Bekink, J. (Kernforschungsanlage Juelich, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 394-398(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The 2.0 Tesla toroidal magnetic field that confines the TEXTOR plasma is provided by a self-commutating 12-pulse thyristor bridge rectifier that can furnish 55 kiloamperes at 1000 volts dc to a 44 millihenry, 12 milliohm load. The first testing began with the application of electric power using a dummy load on 1. Feb. 1981, and with the toroidal field coils on 3. April. On 27 July the toroidal field system was placed under the control of the TEXTOR computer, and the toroidal field measurements began. On 9. September the first plasma was produced, and on 25. September TEXTOR produced an 0.88 second long, 105 kiloampere plasma. The main purposes of these tests were to 1) prove that the equipment can perform at its ratings 2) determine that significant parameters remain within tolerable limits and 3) develop information useful for later checking of the equipment.

25064 **4000 shots with the ASDEX ohmic heating breaker.** Wedler, H.; van Mark, E. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 399-402(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Experience with the ASDEX OH system and, in particular, the pressurized air blast breaker AP 4970 is reported. The Low loop voltage found in ASDEX and its implications for tokamaks of the next generation are discussed.

25065 **Power supplies for the Varennes tokamak a quasi-continuous operation experiment.** Harbec, G.; Przysiezniak, R. (Hydro-Que, Varennes, Can). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 403-406(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The basic design of the power supplies for the Varennes Tokamak experiment has been given. They fulfill the requirements for the machine operational modes A, B and C and minimize the peak power demand from the grid. Circuit simulation studies are well under way and some results given here.

25066 **Development of a high voltage crowbar.** Zubair, K.M.; Rodine, R.R. (Aydin Energy Div-Transrex Facil, Carson, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 423-426(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In high voltage applications, a multi-stage ignitron crowbar can be used as an effective energy diverter. The advantage of a crowbar over conventional spark gap is its ability to fire at any desired voltage. In this article, development of a prototype 300 kV multi-stage crowbar has been described with emphasis on the problems associated with achieving reliable and spark free operation.

25067 **TFTR neutral beam test facility.** Turitzin, N.M.; Newman, R.A. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 431-434(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

TFTR Neutral Beam System will have thirteen discharge ion sources, each with its own power supply. Twelve of these will be utilized for supplemental heating of the TFTR tokamak plasma, while the thirteen will be dedicated to an off-machine test chamber for source development and/or conditioning. A test installation for one source was set up using prototype equipment to discover and correct possible deficiencies, and to properly coordinate the equipment. This test facility represents the first opportunity for assembling an integrated system of hardware supplied by diverse vendors, each of whom designed and built his equipment to performance specifications. This paper discusses various system components, their characteristics, interconnection and control.

25068 **2.0 MVA voltage doubler power supply for capacitor bank charging.** Merritt, B.T.; Tarter, R.; Button, J.B. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 438-441(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A 2.0 MVA voltage doubler power supply for capacitor-bank charging has been designed by LLNL, and a prototype has been constructed by Aydin Energy Division. This paper discusses the acceptance testing of the prototype, operational experience to date, and transients during operation. In addition, it will comment on the design rationale for the supply, the design of the transient supression networks, and protection for these supplies.

25069 **Application of power factor correction in the Tandem Mirror Experiment upgrade magnet power supply.** Corvin, W.C. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 442-443(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The magnet power supply for the Tandem Mirror Experiment Upgrade (TMX Upgrade) is described, which contains 24 groups of dc rectifiers that feed the water-cooled magnets. Each

group consists of five or less rectifiers, connected in series. All 24 are current-regulating, using phase-controlled bilateral thyristors in the rectifier transformer primaries. The electric utility system must furnish reactive power to these phase-controlled thyristors as well as to the commutating diodes in the rectifier bridges. The basic configuration of the magnet power supply are illustrated.

25070 **10 kA pulsed power supply for superconducting coils.** Ehsani, M.; Fuja, R.E.; Kustom, R.L. (Tex A and M Univ, College Station, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 460-462(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A new 4 MW inductor-converter bridge (ICB) for supplying power to pulsed superconducting magnets is under construction at Argonne National Laboratory. This is a second generation ICB built at Argonne Lab. The analytical, design, and control techniques developed for the first prototype have been used in the design of the new system. The paper presents the important considerations in the design of the new ICB. A brief description of the operation of the circuit is also given.

25071 **INTOR power handling and conversion.** Bronner, G.; Gorker, G.E.; Murray, J.G.; Thomson, S.L.; Vogel, H.F. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 752-755(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The purpose of this paper is to define the electrical power requirements for INTOR and describe the power handling and conversion systems proposed for meeting those requirements. The power handling and conversion systems consist of the ac power, energy storage, and power conversion systems for supplying the steady state and pulsed electrical loads.

25072 **Safety procedures for the MFTF sustaining neutral beam power supply.** Wilson, J.H. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 868-871(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The MFTF SNBPSS comprises a number of sources of potentially hazardous electrical energy in a small physical area. A 'defense in depth' approach is used; interlocks are provided in the hardware to make it difficult to gain access to an energized circuit, and the operating procedure includes precautions which would protect personnel even if no interlocks were working. The complexity of the system implies a complex operating procedure, and this potential complexity is controlled by presenting the procedure in a modular form using 37 separate checklists for specific operations. The checklists are presented in flowchart form so contingencies can be handled at the lowest possible level without compromising safety.

25073 **Optically insulated power supply for high voltage instruments.** Nudelman, A.; Ashcroft, D.L. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 958-959(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Electronic instrumentation and control devices, 'floating' at high voltage potentials, are commonly affected by a high level of electrical noise. An investigation of the possible noise source shows that elimination of the 60 Hz power supply could be a major step toward the noise protection. This paper discusses the possibility of replacement of the regular AC instrument power supply by an optically insulated power source based on power photovoltaic cells. The light source would be operated near ground potential.

25074 **Power supply for the poloidal coil of tokamak fusion reactor.** Shintomi, T.; Masuda, M. (Natl Lab for High Energy Phys, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1414-1417(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the history of the power supplies of the accelerators which have had some operation mode as one of the poloidal coils, the problems of the poloidal coil power supply, and the effective applications of the superconductive magnet energy storage to these power supplies. Also described is the shielded pulse superconductive energy storage which is suitable for the power supplies of the poloidal coils.

25075 **Plasma striking voltage production.** Bellomo, P.; Calpin, J.E.; Cassel, R.L.; Zuvers, H. (Ebasco Serv Inc, Princeton, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1427-1430(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR ohmic heating pulsed energy conversion system not only heats the plasma but also develops the plasma striking (ionizing) potentials. Generation and control of these potentials is exercised by six interrupters and six metal resistors. Operating in concert, these components can produced a maximum system voltage of 150 kV. The TFTR 600:1 OH coil-to-plasma turns ratio yields a 250 V plasma striking potential. Plasma striking voltage generation and the salient features of the interrupters and metal resistors are described.

25076 **Reliable trigger unit for rail gap swtiches.** Oicles, J.A.; Fulkerson, E.S.; Mass, B. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1431-1434(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A thyratron based trigger unit is described which is suitable for triggering gas switches. The system configuration employs two identical units for full redundancy, each providing a 45 kilovolt pulse into a 25 ohm resistive load. Failure monitoring, based on timing measurements, ensures against hidden failures.

25077 **TFTR grounding system.** Faulkner, F.K.; Moo, W.; Neumeyer, C.; Zuvers, H. (Ebasco Serv Inc, New York, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1438-1441(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper outlines the rationale and concepts which led to the TFTR grounding system. Examples of induced voltages and voltage gradients expected during plasma disruption are presented. The methods of voltage gradient control and grounding connections are described. In addition to conventional grounding arrangements for equipment housings, fences, cable trays, special requirements for the vacuum vessel, TFTR coil cases, PF coil surfaces and umbrella-like support structures are described. Arrangements for diagnostic grounds which are designed to minimize interference from the facility ground also are described.

25078 **EBT-P plasma heating system instrumentation and control design.** Weaver, T.L. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 72-75(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The instrumentation and control system for the EBT-POP plasma heating systems consists of a three tiered structure. Tier one is a limited scope, high speed, hard-wired personnel and equipment safety system. Tier two is a distributed control system based upon and industrial process controller. It is used for general operational control of the plasma heating system. Tier three is a CAMAC

based system utilized purely for the acquisition of data which is useful, but not necessary to the operation of the device.

25079 **Driver options for steady-state tokamak reactors.** Ehst, D.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 708-711(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents results from two theoretical studies of wave-driven currents in large tokamaks. A lower hybrid (LH) system was designed in detail for STARFIRE, a fuel-scale commercial reactor. The results of this first study indicated that the LH system was workable from an engineering and maintenance viewpoint, but accessibility constraints on the wave prevented wave penetration to the high density plasma interior. To improve upon the STARFIRE results a survey of other wave drivers was conducted in order to identify those waves which more efficiently generate centrally-peaked current density. All calculations in this second study were applied to a demonstration tokamak power reactor (DEMO) which is similar to INTOR in size but has a high current (I ? 9MA) and high beta (/beta/? 0.080). The goal of present survey is to find which wave maximizes the net electrical power produced by the DEMO.

25080 **FRTP prototype power reactors with neutral-beam heating and pellet injection.** Fang, Q.T.; Gilligan, J.G.; Hsiao, M.Y.; Miley, G.H. (Univ of IL, Urbana, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 712-714(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Field-Reversed Theta Pinch (FRTP) represents a promising confinement approach to fusion power. This has become more evident because of the favorable confinement scaling that has been predicted based on studies of Loss-Cone Scattering Transport (LCST). Therefore, a step toward the FRTP prototype power reactors is proposed. The potential advantaes of the FRTP reactors includes: 1) high /beta/and hence high power density, 2) compactness, 3) high density (10/sup 15/ -10/sup 16/ cm-/sup 3/) and readily hot (1-3keV) plasma formed by implosion, compatible with further (neutral-beam) heating, 4) simple linear geometry and hence easy modular production and maintenance, and 5) easily coupled direct energy conversion. Neutral-beam heating and pellet refueling are assumed in these reactors, serving simultaneously for heating, refueling and maintaining the field reversal and the plasma moment of inertia.

25081 **Installation and start-up of the PDX neutral beam injection system.** Williams, M.D.; Eubank, H.P.; Kozub, T.; Kugel, H.W.; Rossmassler, J.E.; Schilling, G.; VonHalle, A. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 760-762(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The PDX Neutral Beam Injection System consists of four beamlines of basic PLT injector design with changes primarily related to the containment of increased beam power and pulse length. The beams are driven by four ORNL developed duopigatron ion sources rated at 50 kilovolts and delivering 1.5 megawatts H/ degree/or 2 megawatts D/degree/each to the PDX target plasma. The early attainment of 8 megawatts of D/degree/injected into the PDX was due to thorough conditioning of each ion source by ORNL prior to delivery coupled with several field design changes and improvements made as a result of injector experience on the PLT.

25082 **Performance of the ASDEX neutral beam injector.** Staebler, A.; Vollmer, O.; Baeumler, J. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 767-770(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The first of two neutral beam injectors for the ASDEX tokamak has been put into operation. The design value of 1.25 mw neutral power into ASDEX was obtained within a few weeks of operation; the injection system was found to work quite reliably. Beam power mesurements have shown a transmission of total power to the beamline calorimeter of 70%, a neutralization efficiency of 60 %, reionization losses between magnet and torus of less than 10 %, and geometric losses within the duct of a few percent, resulting in a neutral power offered to the plasma between 35 % and 40 % of the drain power. Measurements have been performed concerning the properties of the Ti-evaporator pumping system. The results are compared with beamline code calculations.

25083 **Experience with the Wendelstein VII-neutral injectors.** Ott, W.; Penningsfeld, F.P.; Cooper, D.; Freudenberger, K.; Probst, F.; Ringler, H.; Speth, E.; Suess, R. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 779-782(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The reliability of the injector systems for W VII-A has been improved. The factors which had reduced their availability during three experimental periods are outlined. A serious problem remaining in this injection experiment is radiation of plasma impurities during injection. The source of plasma impurities has not yet been identified with certainty. Theoretical and experimental evidence demonstrating the increase of plasma radiation due to impurities in the neutral beam is presented.

25084 **Highlights of the Zephyr neutral beam injection system conceptual design.** Cooper, W.S.; Anderson, O.A.; Elischer, B.P.; Goldberg, D.A.; Hopkins, D.B.; Jacobson, V.L.; Lou, K.H.; Tanabe, J.T. (Lawrence Berkeley Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 783-786(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In June, 1980, the Lawrence Berkeley Laboratory (LBL) began a conceptual design study for a 160 keV, remotely maintainable neutral beam injection system (NBIS) for the ZEPHYR ignition tokamak proposed by the Max-Planck-Institut fuer Plasmaphysik. The ZEPHYR project was cancelled, and the LBL design effort concluded prematurely in January, 1981. This report describes the conceptual design as it existed at that time, and gives brief consideration to a schedule, but does not deal with costs.

25085 **Beam trajectories calculation code for ion source in neutral beam injector.** Nishimura, H.; Sato, T.; Isobe, S. (Hitachi Ltd, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 787-790(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A beam trajectory calculation code, HIBOC is developed, which simulates ion extraction from plasma and acceleration through an electrode structure in an ion source for beams generated by a neutral beam injector. This paper describes not only the principles of the HIBOC calculation code but also several numerical techniques used in the formulation of the code. The calculated values are compared with the experimental ones obtained by L.R. Grisham et al. The results show that the program can be used to explain beam trajectory profiles.

25086 **Gas density distribution results for NBSTF.** Feist, J.H. (Lawrence Berkeley Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 791-794(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The gas density at some points of the beam path in the TFTR Neutral Beam System Test Facility (NBSTF) has been measured. If compared with previous calculations, the density is larger that expected. This is caused by a conductance limitation of the installed cryopumps and by a low gas temperature. No evidence for the presence of an abnormally forward peaking of the

streaming gas out of the neutralizer and for excessive desorption of gas molecules by fast beam particles has been found.

25087 **Conductance thermal accommodation and beaming from neutralizer gas-cells.** Hemmerich, J.L.; Deksnis, E.B. (Kernforschungsanlage Juelich, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 795-797(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Measurements on neutralizer gas-cell models show, that toward the limit of their usual operating pressure range both conductance and gas density are inversely proportional to the temperature of the gas-cell walls. Beaming profiles were measured for neutralizers of rectangular cross-section, ie 1/0'th scale models of JET neutralizers. Results do not show very strong gas streaming, the exiting distribution being very close to a cosine squared distribution. Monte-Carlos computation with a simple model predict a peaked profile. Present experiments indicate the interaction of gas-particles and duct walls to be complex and velocity dependent.

25088 **Development, fabrication and tests of the periplasmatron ion sources for ASDEX.** Bonnal, J.F.; Druaux, J.; Fois, M.; Oberson, R.; Tual, D. (CEA, Fontenay-aux-Roses, Fr). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 802-805(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The ASDEX neutral injection lines are equiped with 8 Periplasmatron ion sources which have been built and tested at Fontenay-aux-Roses under contract from IPP (Garching). The technical clauses of the contract insist on the obtention of a high reliability rate (greater than 80 % at nominal performances). This paper first describes the most recent improvements obtained during the tests of the sources. Then the definitive characteristics of the series sources and the results of the tests of qualification are summarized.

25089 **Damping elements in the high-voltage circuits of the ASDEX neutral injectors.** Kunze, R.C.; Lohnert, H. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 811-814(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper deals with a so-called snubber-transformer, introduced into the power supply cables of a high power ion-source in order to control the well known harmful effects of high-voltage breakdowns. The snubber transformer is a coaxial aircoil transformer, which is loaded with an R, C circuit. It is installed at the source-end of the multipole power cable and is a part of the cable itself. The exact dimensions of the various circuit elements have been determined with a computer program.

25090 **Doublet III neutral beam power system.** Nerem, A.; Beal, J.W.; Colleraine, A.P.; LeVine, F.H.; Pipkins, J.F.; Remsen, D.B. Jr.; Tooker, J.F.; Varga, H.J.; Franck, J.V. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 815-818(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Doublet III neutral beam power system supplies pulsed power to the neutral beam injectors for plasma heating experiments on the Doublet III tokamak. The power supply system is connected to an ion source where the power is converted to an 80 kV, 80A, 0.5 sec beam of hydrogen ions at maximum power output. These energetic ions undergo partial neutralization via charge exchange in the beamline. The energetic neutral hydrogen atoms pass through the Doublet III toroidal and poloidal magnet fields and deposit their energy in the confined plasma. The unneutralized ions are deflected into a water-cooled dump. The entire system is interfaced through the neutral beam computer instrumentation and control system.

25091 **Magnetic shielding and eddy current effects measurements in a Doublet III neutral beam injector.** Fasolo, J.A.; Kim, J.; Pipkins, J.; Treglio, J. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 819-822(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Doublet III(D-III) neutral beam injectors are immersed in the fringe fields of the ohmic heating and poloidal field coils. Measurements of the fields penetrating into the shielded regions of one of the injectors have been made with the ion sources and their shielding removed. The shielding measurements were made during D-III shots for which the ohmic heating flux swing was 2.4 V-sec. Measurements of the changes in two components of the field in going from one side of the copper cryopanel to the other were not sufficiently accurate to permit a calculation of the room temperature pressure on the panel at the point of measurement.

25092 **Design and development of an electronic crowbar for the protection of HVDC neutral beam components.** Hesselgrave, D.H. (Aydin Energy Div, Palo Alto, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 826(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

25093 **Icrf antenna design for a 3 MW, 3 s heating system on the TEXTOR tokamak.** Noterdaeme, J.M.; Weynants, R.R.; Messiaen, A.M. (K Mil Sch, Brussels, Belg). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 831-834(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The design of the antenna system and of its interface with the transmission line to be installed on the TEXTOR tokamak as part of a complete multimegawatt rf heating system is described. Each of the two antennas is designed to couple 1.5 MW during 3 s at about 27 MHz. Transmission line theory and plasma coupling codes are used to define the antenna dimensions. The mechanical constraints imposed by the presence in TEXTOR of a hot (600/degree/C) liner are identified. The antennae are mounted on a reinforced section of this liner. A special design of the interface allows for differential thermal dilatation and leak-free passage for cooling of the feedthroughs.

25094 **Mechanical aspects of the design of a lower hybrid frequency grill launcher for the Joint European Torus (J.E.T.).** Lipa, M.; Melin, G.; Rey, G.; Tonon, G. (EURATOM, Grenoble, Fr). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 839-843(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The main goal of this study is to define an RF heating system on the grounds of the state of the art of both experiment and theory. Such an rf system should have the capability of coupling 15 MW to the plasma core of JET during 10 sec by taking into account the JET plasma parameters as well as technical constraints due to the specific environment of the JET facility. The features of the coupling system necessary to permit heating of the JET plasma up to plasma temperatures of 10 KeV and plasma densities higher than 10/sup 14/cm-/sup 3/ have been established from both theoretical and numerical considerations. This study results in the choice of a frequency of 1,5 GHz. The grill launcher which has been studied is composed of four horizontal rows of ten waveguides each and is located in one of the main ports of the torus.

25095 **High voltage rf coaxial vacuum bushing design considerations.** Greenough, N.L.; Grotz, G.F. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 844-847(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A high-voltage vacuum-barrier feedthrough bushing is required to feed ICRF heating power into the PLT tokamak. The bushing is located in a high voltage, low current portion of the transmission line feeding the antenna. High voltage breakdown problems provided the impetus to modify and test the existing feedthrough bushings, develop a computer program for stress analysis and create a new cone bushing design for increased power handling capability. The test facility supports complete component testing under controlled, instrumented conditions.

25096 **Design of a 9 inch stub tuner for PLT icrh operation.** Bohr, A.H. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 848-850(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

After several years operation of the Princeton PLT Machine, it was desired to replace the present 9 inch stud tuner system with a new design aimed at the elimination of wear and tear which has occurred. The new design uses a coaxial screwjack drive as compared to the previous off-axis drive. An existent motor-gearing-sensing drive developed at the Plasma Physics Laboratory is used as a packaged drive. Greatly increased activity in ICRH (Ion Cyclotron Resonance Heating) operations on PLT has created the need for these stub tuner improvements.

25097 **1.2 megawatt, 800 MHz rf generator for lower hybrid resonance heating.** Schnabl, F.J.; Martin, A.R.; Newman, W.G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 851-854(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes an RF heating system capable of providing an RF power output of 1.2 Megawatts at 800 MHz for the PLT machine. The RF generating system utilizes six Varian VA-955 UHF, TV Klystrons operating in parallel to generate the output power. Pulse widths can be varied from 1 millisecond to 500 milliseconds by means of six modulator/regulators which utilize Eimac 4CX35000 Tetrodes as the switch tubes. Detailed circuit description of the various major component parts of one of the six RF channels are provided along with some of the major design considerations.

25098 **Beam waveguide launcher for high power ecrh heating in large tandem mirror machines.** Beyer, J.B.; Scharer, J.E.; Audenaerde, K. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 855-857(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

It has been shown that a quasi-optical feed system for plasma heating in fusion reactors is totally compatible with the reactor constraints. Such a system allows multiple medium power gyrotron sources to be combined into intense beams which can be focused onto the plasma in a well defined cone. The antenna system is derived from an offset cassegrain and employs gaussian beams which give good energy concentrations without breakdown and are characterized by an absence of side lobes. The antenna system also isolates the sources from neutron flux and allows the gyrotrons to be located well away from strong magnetic fields as well as providing for good vacuum pumping in the intervening region.

25099 **FED and starfire icrh systems.** Freije, S. (TRW, Redondo Beach, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 859-863(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Conceptual designs for the ICRH systems for FED and STARFIRE are described. These two tokamaks differ in both the major design emphasis and the parameter regime, e.g. field strength and subsequently the required heating frequency. The impetus for the FED design was primarily heating with a maximum power requirement of 50 MW. The selected heating mechanism was the second harmonic cyclotron resonance of deuterium, at 54 MHz. A dielectric filled single ridged waveguide was chosen as the optimum launcher. STARFIRE on the other hand was designed on the basis that current drive was a major requirement. A multiple frequency system was designed to drive current via the low phase speed magnetosonic wave at 154 MHz and to bulk heat with the third harmonic of deuterium at 132 MHz.

25100 **Icrh system characteristics.** Freije, S. (TRW, Redondo Beach, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 864-867(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Ion cyclotron heating was selected for detailed design analysis for the FED and STARFIRE concepts as part of a review of the various rf methods used to heat tokamaks. The discussion of the two ICH systems will be given in two papers: this one is entitled 'ICH System Considerations,' and the accompaning paper is 'FED and STARFIRE ICH Systems.' Here, the basic components of an ICH system for an advanced device are described, including issues and theory.

25101 **Analysis of optimal control theory applied to plasma position and current control during neutral beam heating in TFTR.** Firestone, M.A.; Rossi, M.; Gran, R. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 872-875(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A linear dynamic model of the plasma-poloidal field coupling in TFTR has been developed and used to design a linear optical control feedback system for controlling plasma position and current. This paper considers the pre-compression, neutral beam heating region of a strong compression discharge and develops a methodology for analysing and evaluating the feedback. By utilizing a nonlinear realistic simulation of the plasma-poloidal field interaction, a more physical and accurate picture of the closed loop dynamics emerges.

25102 **Development and operation of PDX neutral beam computer system.** Kozub, T.; Rossmassler, J.E.; Eubank, H.P.; Kugel, H.W.; Schilling, G.; von Halle, A.; Williams, M.D. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 912-915(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Poloidal Divertor Experiment (PDX) is a tokamak experiment designed to study impurity control through the use of magnetic divertors utilizing four neutral beams for heating. Each beamline is equipped with a 30 cm diameter ORNL source providing either 1.5 MW H/degree/or 2.0 MW D/degree/. The four neutral beam injectors have succeeded in reliably delivering 7 megawatts of neutral beam power into PDX. The PDX neutral beam computer system supports the operation of the beamlines including ion sources and related diagnostics. A dedicated DEC PDP 11/34 computer is interfaced to the neutral beam components through a five crate CAMAC parallel/serial highway system.

25103 **Design and development of the torus gas injection control system for TFTR.** Rauch, W.A. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 920-923(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The purpose of the Gas Injection Control system (GICS) is to control the flow rate of gas injected into the torus of Princeton's Tokamak Fusion Test Reactor (TFTR). The GICS is a computer controlled system similar in function to the manually controlled analog system used on Princeton's Poloidal Divertor Experiment (PDX). Capabilities of the system include open and closed loop pulse control, and steady state control, of gas injection into the torus. In the closed loop mode this system essentially samples deviations in various machine parameters and operates on them to formulate a flow control signal proportional to the deviations.

25104 **Very high level neutral beam control system.** Elischer, V.; Jacobson, V.; Theil, E. (Lawrence Berkeley Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 941-944(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In this paper we restrict ourselves to a general discussion of neutral beam control and to principles we believe contribute to a successful system. In particular, we believe the system is based on a control hierarchy with two essential feactures; (1) Its levels reflect actual stages of beamlines construction and operation. This tends to encourage appropriate software done at an appropriate time. (2) There is an explicit recognition that data produced at any level must be saved and available for use at higher levels. This tends to make a system which grows by building on previous work, rather than by redoing it. In the following sections of this paper, we first discuss the control hierarchy in general followed by a description of its levels. Often the control structure leads to a particular software methodology and we enlist these cases as examples of the usefulness of the hierarchy.

25105 **Control of a high-power neutral beam generator by means of arc-current regulation.** Lietzke, A.F.; deVries, G.J. (Lawrence Berkeley Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 945-948(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Preliminary tests of a method for regulating the accelerator perveance of a high-power neutral beam, by controlling the plasma source have been conducted and are encouraging. The phase shifts and feedback paths were identified and quantified, and stabilization was achieved by adding and R-C snubber at the accelerator power supply output which reduced the destabilizing phase lags. The incorporation of such regulators into future systems is envisioned to make these high-power neutral beam systems cheaper and easier to operate.

25106 **Cable information retrieval program.** Murray, H.A.; Calaby, L.F.; Davis, J.E. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1040-1043(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR Neutral Beam System contains in excess of 55,000 wires ranging from high voltage cable to instrumentation wire. A program has been written to generate and organize the information required for cable procurement, tray design, cable installation, inventory control and system trouble shooting. This program is designed to accommodate a number of initially identical systems which may be modified and upgraded individually. Selective information for field installation may be generated. Information formals for cable inventory information, calbe characteristics, estimated pull lengths, plan point data, and wire signal description. A program which demonstrates all the capabilities of the system has been written for user instrucdtion.

25107 **Future needs for neutral beams in fusion.** Stewart, L.D. (Exxon Nucl Co, Princeton, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1337(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Examination of design studies for future mirror and tokamak devices reveals neutral beam performance requirements which are beyond present development program accomplishments. These performance requirements are then the development needs and can be grouped into three time frames: Requirements for near term physics experiments (before 1980). Requirements for the FED/TMNS time frame (1990-1995), and requirements for a fusion demonstration plant (FDP; about 2005). For the near term, the development needs are longer pulse lengths and a higher full-energy fraction for positive ion based systems. For the FED/TMNS time frame, additional needs are 150-175 keV systems with direct recovery (for FED or INTOR heating), 200-400 keV (for mirrors and for tokamak current drive experiments), longer pulse (to essentially steady-state), and possibly tritium injectors. The additional need in the FDP time frame would be 2 MeV beams for tokamak current drive.

25108 **Status of the JET neutral injection system.** Altman, H.; Brookes, C.; Dines, A. (JET Jt Undertaking, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1338-1341(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The present status of the physics design and engineering of the JET neutral injection system is presented. The system is designed to deliver 5 MW of full energy 80 kV neutral atoms with a pulse duration of 10 sec. All the components for eight beam lines are arranged in a single compact structure which is enclosed in a large vacuum tank.

25109 **Prototype ion source for JT-60 NBI.** Tanaka, S.; Akiba, M.; Horiike, H. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1342-1346(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The present paper describes the characteristics of the 75 keV/35 A/0.1 sec source, including the arc efficiency, beam optics and the composition of ion beam species. Secondly it describes the heat loading in the 70 keV/6 A/10 sec source and the results of durability test of two types of grids; one is molybdenum grid on which copper pipes are brazed and the other molybdenum pipes are brazed. Finally, it reports about the ion sources which reflect the results described here and have been fabricated and installed on the prototype unit of JT-60 NBI.

25110 **Construction of prototype injector unit for JT-60.** Kuriyama, M.; Akiba, M.; Akiba, M. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1347-1351(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A prototype neutral beam injector unit for JT-60 has been constructed prior to fabrication of 14 injector units for JT-60 to confirm system performances of a beam line and a power supply unit. Basic performance for the prototype unit is an injection power of 1.5MW neutral hydrogen atoms at 75keV, up to 100 kV, with a pulse length of as long as 10 sec for every 600 seconds. The prototype unit has been already fabricated and installed in JAERI and is now under testing.

25111 **Design of calorimeter and ion dump for JET neutral injection beam line.** Haange, R. (JET Jt Undertaking, Abington, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1352-1355(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The JET neutral injection beam line consists of a large neutral injection box (approx. 7m x 3.6m x 3m) with eight 'PINI's' (Plug-In Neutral Injector) attached to its back panel. The PINI's are mounted in two vertical banks of four. The charged particles are separated from the neutrals during the passage through a deflection magnet and are subsequently intercepted by full energy ion dumps and fractional energy ion dumps. The neutralized beam can be intercepted by a calorimeter which can be rotated out of the beam to allow injection into the plasma. The design of the calorimeter and full energy ion dump are the subject matter of this paper.

25112 **Status and trends in the development and application of positive-ion-based neutral injectors.** Menon, M.M. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1356-1359(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The present status of the technology of positive-ion-based neutral injectors is examined with particular reference to the Oak

Ridge National Laboratory neutral beam development program. It is shown that the development and application of multi-megawatt neutral beams have been quite successful. Injector parameters that have been utilized and those that are planned to be utilized in various confinement devices are examined. Development needs for the upcoming applications are shown to be primarily in the area of extending the beam pulse length to several seconds.

25113 **Improved plasma generator for the PLT/PDX neutral beam injectors.** Schilling, G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1519-1521(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Neutral beam injection heating of experimental plasmas confined in the PLT tokamak was initiated in the summer of 1977. Four injectors developed and fabricated by the Fusion Energy Division of the Oak Ridge National Laboratory [1]became operational by the spring of 1978, and hot plasmas were achieved in the summer of 1978. Since the total power injected into the tokamak simultaneously by all four beams fell short of that expected (3MW H/degree/) on the basis of single-beam test stand operation, and it had been quite difficult to drive some of the ion sources up to the higher power levels, injector improvement was attempted. It was possible to improve the ion source plasma generator performance by a relatively simple change in arc arc circuit.

25114 **Industrialization and production of neutral beam ion sources for MFTF.** Lynch, W.S. (RCA, Lancaster, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1530-1533(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The existing LLNL designs of the 20 and 80kV deuterium fueled Neutral Beam Ion Source Modules (NBSM) have been industrialized and are being produced successfully for the MFTF. Industrialization includes value engineering, production engineering, cost reduction, fixturing, facilitation and procurement of components. Production assembly, inspection and testing is being performed in a large electronics manufacturing plant. Decades of experience in high voltage, high vacuum power tubes is being applied to the procedures and processes. Independent quality and reliability assurance criteria are being utilized. Scheduling of the various engineering, procurement and manufacturing task is performed by the use of a Critical Path Method (CPM) computer code, Innovative, computerized grid alignment methods were also designed and installed specifically for this project. New jointing and cleaning techniques were devised for the NBSMs. Traceability and cost control are also utilized.

25115 **Engineering design and manufacturing of prototype neutral injector for JET.** De Vere, A.P.C.; Scholes, R.E.; Altmann, H.; Bottiglioni, F. (Culham Lab, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1534-1537(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The first of Neutral Injection heating on JET requires injection of 5 MW of 80 neutral atoms into the plasma torus for times in excess of 10 sec. Eight injectors, each rated at 80 kV and 60 amp of hydrogen ions, will be required to provide this nett 5 MW of full energy hydrogen atoms. This paper describes the engineering design and manufacturing aspects of the prototype versions of these injectors, which are currently referred to as Plug-In Neutral Injectors. In particular the philosophy of accurate alignment of the tetrode accelerator structure on a high voltage insulated flange will be discussed in conjunction with the problem of active cooling of grids.

25116 **Design of the precast, post-tensioned concrete shielding structure for the TFTR neutral beam test cell.** Kaminsky, E.L.; Nilsson, E.T. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1546-1547(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

At the TFTR facility, the Neutral Beam Test Cell is a room separated from the TFTR Cell by a 4-foot-thick concrete wall and devoted to testing the neutral beam injector. The function of the shielding structure is to protect personnel from radiation casued by pulsing the injector. The distance from the TFTR device to the injector is large enough to permit use of magnetic materials in the shielding structure, and the neutron flux levels are small enough so that ordinary concrete of moderate thickness may be employed. Radiation considerations are not discussed in this paper, which is devoted to a description of the structural design of the shield.

25117 **Cyrogenics for TFTR neutral beam test cell.** Tasoulias, G.W.; Wright, K.E. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1609-1612(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

25118 **Pneumatic hydrogen pellet injector development at Oak Ridge National Laboratory.** Lunsford, R.V.; Foster, C.A.; Milora, S.L. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1721-1724(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes the design of the second and third generation pneumatic devices which are being developed at ORNL. A four shot injector has been designed and operated and is currently installed on the PDX device at PPPL. A modified four shot has been designed for use on the MIT Alcator C DEVICE. The Advanced Pneumatic Injector is a development project. It's purpose is to demonstrate acceleration of 2-mm pellets at a repetition rate of 10 s/sup -1/.

25119 **D/sub 2/ - pellet injection system.** Buechl, K.; Andelfinger, C.; Kollotzek, H.; Lang, R.; Ulrich, M. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1725-1728(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

For density build-up of a target plasma for neutral injection in the stellarator "Wendelstein W VIIA"and for refuelling of the divertor tokamak ASSDEX, pellet light gas guns have been developed. In a continuous flow cryostat cooled by liquid helium with a comsumption of 2 - 3 liter liquid helium per hour deuterium was condensed and solidified. To prevent the propeller gas entering the torus was used. In one system a 3.6 mm guiding tube following the barrel was applied successfully. By optical diagnostics pellet velocity, pellet size and pellet trajectory is measured. For a pellet centrifuge system investigations of carbon fiber rotors were made up to surface velocities of 1500 m/s.

25120 **Overview of DOE gyrotron development program.** Murphy, M.; Haas, G. (US DOE, Washington, DC, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2101-2104(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A significant budget increase in FY80 helped to establish a multifaceted gyrotron development program within the Department of Energy (DOE) Office of Fusion Energy (OFE) with efforts at a university, two Government laboratories, and two industrial firms. A 28 GHz gyrotrons has been operated reliably at >200 kW. Development of >100 GHz devices at 200 kW, cw and then at multimegawatt, cw is projected for the future.

25121 **Gyrotron - an ECH system component.** Loring, C.M.; Eason, H.O.; Kimrey, H.D.; Jory, H.; White, T.L.; Evans, S.J. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2105-2108(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The gyrotron is a sources of millimeter wave energy for fusion plasma heating. The characteristics of this high power, efficient electron tube are related to the requirements for its support systems. The effects of various operating parameters upon the gyrotron's behavior are discussed. Data from development and system operation are shown.

25122 **Recent progress in fusion gyrotron development.** Shively, J.F.; Stone, D.S. (Varian Assoc Inc, Palo Alto, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2109-2112(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The gyrotron, a microwave tube capable of producing high power output at millimeter wavelengths, has recently found applications for electron cyclotron resonance heating of plasmas in controlled thermonuclear fusion reactor experiments. This paper describes work in progress to develop a gyrotron oscillator to deliver 200 kW CW at 60 GHz (/lambda/sub //? 5 mm). A pulsed oscillator is described which produced over 200 kw peak power. A CW oscillator is under construction. The latest experimental results are presented.

25123 **60 GHz ecrh system for the PPL PDX machine.** Bowen, N.; Doane, J.; Newman, W. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2122-2125(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A 60-GHz kW Electron Cyclotron Resonance (ECR) heating system for the PDX machine is now under construction. It will use two of the pulse-type 60 GHz gyrotrons now being developed by Varian for the U.S. Department of Energy under a subcontract for Oak Ridge National Laboratory. The system will be used for various temperature profile, start-up, and heating experiments. This paper describes the design of the system and its physical configuration.

25124 **Compact tritium removal equipment for air cleanup of glove box.** Yamaguchi, K.; Kudo, H.; Makimoto, Y.; Shikata, E. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1165-1168(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A compact removal equipment (TRE), assembled in a console with casters, has been developed for air cleanup of a glove box to be used for handling tritium in some 10 curies. The TRE was designed to remove gaseous tritium in the form of T/sub 2/, HT and CH/sub 3/T through oxidation with precious metal/alumina catalyst followed by adsorption in zeolite pellets. The present paper reports the results of air cleanup experiments of atmosphere in a glove box by using hydrogen tritide and the HT-to-HTO factional conversions determined under various conditions of catalyst temperature and the gas flow rate.

25125 **New process to remove tritium from glove box atmospheres.** Weichselgartner, H. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1169-1172(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The best existing tritium absorption system will remove tritium to a level of about 5 x 10-/sup 5/ Ci/m/sup 3/. Besides the catalyst bed and the molecular sieve column some more components, like blower, heater, cooler, preheater and heat exchangers must be installed in a tritium absorption unit. The new process reduces the number of components significantly. Only one reation column, a circulation pump and a blower are necessary but no heating devices. The process is based on catalytic hydrogenation of liquid organic components, such as linolenic acid. The process was investigated by a laboratory test apparatus which was doped with 2 ml of hydrogen (corresponding to 5 Ci of tritium). Within 70 minutes, the amount of hydrogen was reduced to 0.15 ml (approximately 0.4 Ci).

25126 **Status of physical data on tritium and its behavior in fusion related systems.** Burger, L.L.; Morgan, L.G. (Battelle, Pac Northwest Lab, Richland, WA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1196-1199(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The literature on 'tritium properties' was surveyed up to 1980 and evaluated. The study includes physical properties, exchange reactions, and solubility, permeability, and diffusion. The present status is given for systems of interest in fusion research. Selected examples illustrate the quality and quantity of the data. Recommendations are made for further work.

25127 **In-situ tritium recovery from Li/sub 17/Pb/sub 83/ breeding blanket.** Sze, D.K. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1213-1216(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Li/sub 17/Pb/sub 83/ is an attractive breeding material due to its high tritium breeding potential, low tritium solubility and relative inertness toward water. The University of Wisconsin Fusion Engineering Program in conjunction with the Stellarator/Torsatron Lab has addressed some of the key technical issues of stellarator/torsatron power reactors. As a result of these deliberations, a point reactor design called UWTOR-M has evolved. This paper discusses the blanket design concept and in particular the tritium recovery aspect of this blanket design.

25128 **Fast shutter valve for TFTR neutral beam lines.** Wright, K.E.; Clemens, F. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1402-1405(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A Prototype FSV has been designed, fabricated and tested. Results show a conductance in the range of 20 to 30 liters/sec with translation times <120 msec. for 7000 cycles and /similar/300 msec, for a total of 20,000 cycles. Translation times of 60 to 70 msec. can be achieved.

25129 **Development of tritium technology for the magnetic fusion energy program.** Anderson, J.L. (Los Alamos Natl Lab, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2066(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The use of the radioactive hydrogen isotope of mass three (tritium) as a fuel component in fusion reactors introduces several possible problem areas in reactor design. The primary fusion reactors in a D-T plasma is the T(D,n)/sub 4/He reaction with an energy release of approximately 17.5, nMeV. Fuel is bred in fusion reactors and the bred fuel must be removed efficiently from the blanket. A second area of lithium technology is that of fuel reprocessing. Other special problems introduced by tritium are related to radiation damage and chemical compatibility of materials used in tritium facilities. This paper briefly describes the current status of tritium technology in each of these areas.

25130 **Developments in the fuel cleanup system for the tritium system test assembly.** Bartlit, J.R.; Carlson, R.V.; Walthers, C.R. (Los Alamos Natl Lab, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2084-2087(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Fuel Cleanup System is used to remove impurities from the simulated fusion fuel stream at the Tritium Systems Test Assembly (TSTA) Los Alamos National Laboratory. A total of five activated metal beds will be used at different operating temperatures (as high as 1170 K) for various imposed by properties of construction materials at high temperature -- properties such as low strength, the formation of low-melting eutectics with uranium, and

high permeability for tritium. The development and testing and bed designs, to avoid these problems are described.

25131 **Properties of yttrium sorbers which improve tritium sorption rate from liquid lithium.** Fischer, P.W.; Talbot, J.B.; Clinton, S.D.; Rogers, F.L.; Watson, J.S. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 2094-2097(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Tritium inventory in and fusion reactor blanket must be kept low (less than a few kg) so that the reactor can supply its own fuel after a reasonable period of operation (i.e., before external sources of tritium are exhausted. To achieve this, the tritium concentration in the breeding material must be kept low, typically <10 ppm. Liquid lithium continues to be one of the most likely tritium breeding materials. Sorption of tritium from lithium by yttrium metal getters has the demonstrated capability for reducing the tritium concentration to >1 ppm at acceptable rates. To evaluate the performance of different yttrium samples, mathematical analysis of the system was developed to determine sorber diffusivity system was developed to determine sorber diffusivities. The purpose of this paper is to outline the mathematical analysis, report results of the analysis for previous sorption experiments, and present predictions of the model.

25132 **Prospects of energy transformation between fusion reactor and OTEC plant.** Denno, K. (NJ Inst of Technol, Newark, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 950-953(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents conceptual feasibility criteria for the coupling of an off-shore nuclear fusion reactor to OTEC plantship. The mode of connection is by cooling oceanic region to a significant temperature gradient enhancing the extraction of Thermal energy. Criteria have been developed for the rate of heat transfer from the reactor main zone as well as from the exhaust diverted plasma. Induced temperature effects on the exhaust plasma are expressed along with stability relationships for the rate of heat transfer to OTEC energy conversion components, by evaporator and condenser systems.

25133 **Design and cost of the TFTR power conversion system.** Cassel, R.L. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1435-1437(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents an overview of the TFTR power conversion system in terms of the cost and some unique design features employed in the conversion system to match the performance requirements of the tokamak within the budgetary and cost restraints allocated for the system.

25134 **Direct energy converter for UW tandem mirror reactor.** Yang, T.F.; Maurer, W. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1813-1816(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In a Tandem mirror reactor, the end loss ions can be preferentially leaked out one end and hot electrons out the other. A single stage regular Plasma Direct Convertor (PDC) at the ion end to recover the ion power and a simple thermal dump at the electron end were considered by the reactor design team at LLL. Such a convertor has the net efficiency of 64% and would be as high as 77% if the 3.5 MeV /alpha/-particles can be recovered, which is the largest single loss. Another large loss is due to energy spread. A very important question, the neutron steaming out the ends, was not addressed in that design. In this study, an attempt was made to find solutions to these problems.

25135 **Transport of light ion beams in plasma channels.** Olsen, J.N. (Sandia Natl Lab, Albuquerque, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 660-663(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Intense beams of light ions are being transported over distance of 1-2 meters in plasma channels in progress toward inertial confinement fusion driven by particle beams. This paper reports experimental work at Sandia Labs, Where ions have propagated in wire-initiated and laser-initiated discharge channels. Particular emphasis is given to studies of laser initiation and channel stability.

25136 **Preliminary conceptual design and engineering aspects of a light ion fusion target development facility (TDF).** Cook, D.L. (Sandia Natl Lab, Albuquerque, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 664-667(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

If inertial confinement fusion can be demonstrated at reasonable levels of driver power and energy, development of targets for a host of inertial fusion applications will be necessary. Engineering aspects and design issues of a facility dedicated to this purpose, a Target Development Facility (TDF) using light ion beams as the driver, have been explored in a preliminary conceptual design. In this paper, the nature of the facility and results of the preliminary design are discussed.

25137 **High target gain to ICF reactor - a problem of repetition.** Moses, G.A. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 673-675(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The near term goal of the inertial confinement fusion (ICF) program in the United States is the demonstration of high target gain, where the thermonuclear energy released from the ICF target exceeds the driver energy input to the target by roughly a factor of one hundred or more. This paper briefly reviews the most notable published ICF conceptual reactor designs and then focuses on the engineering problems of commercial ICF reactors with emphasis on the problems associated with the high repetition frequency inherent in such systems.

25138 **Gas dynamics and heat transfer phenomena in liquid metal ICF reactor first surfaces.** Peterson, R.R.; Sze, D.K.; Hassanein, A.M.; Pong, L. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 680-683(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The INPORT concept of first surface protection in ICF reactors is discussed in the context of a heavy ion beam reactor. Porous SiC tubes bathed in liquid Pb/sub 83/Li/sub 17/ lose a layer of film to X-ray evaporization. The dynamics of this vaporized film's consequent radiation of energy back to the tubes, condensation and reevaporization are studied in detail. The presence of this vapor is found to not degrade the overall performance of the reactor.

25139 **Development of the rf linear accelerator test bed for heavy ion fusion.** Watson, J.M. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 684-687(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The amount of absorbed energy required by high gain deuterium-tritium targets for inertial confinement fusion reactors is now projected to be greater than 1 megajoule. At these energy levels, the concept of small, dispersed power plants is no longer viable. This leads to the use of large power centers which exploit every means of maximizing output power versus capital cost. It has become apparent that a heavy ion fusion driver is the preferred choice in this scenario. To demonstrate this accelerator-based option, the national program has established two test beds: one at

Argonne for the rf linac/storage ring approach, and one at Lawrence Berkeley Laboratory developing and induction linac. The Argonne Beam Development Facility (BDF) would consist of a 40 mA RF linac for Xe+/sup 8/ , a storage ring, and a 10 GeV synchrotron. One of the most important aspects of the BDF program is the control of beam quality throughout linac acceleration, stripping to higher charge states, funneling of multiple beams, and frequency transitions. The design and status of the BDF is described as well as future program options to demonstrate as many solutions as possible of the issues involved in this approach.

25140 **Nova laser system for inertial confinement fusion.** Simmons, W.W.; Godwin, R.O.; Hagen, W.F.; Holzrichter, J.F.; Levy, A.J.; Trenholme, J.B. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1221-1224(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Nova laser fusion research facility, currently under construction at LLNL, and authorized by Congress at /195M, will provide researchers with powerful new tools for the study of nuclear weapons physics and inertial confinement fusion. Nova is a large, solid state laser, generating a fundamental wavelength of 1.0 /mu/ m, intended to deliver 200-300 kJ in a few nanoseconds to appropriate advanced inertially confined fusion targets containing deuterium and tritium. The Department of Energy has approved construction of ten Nova Laser beams and the associated laboratory buildings. The remaining ten beams, and harmonic conversion apparatus, are presently under consideration.

25141 **Nova mechanical systems.** Hurley, C.A.; Bradley, G.; Frick, F. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1225-1228(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper discusses the mechanical design features of large glass laser components, such as power amplifiers, spatial filters, Faraday rotators, turning mirrors, stable support systems and the integration of these components into a total system. The Nova system consists of ten laser beam lines with an output aperture for each beam of 74 cm.

25142 **Optical components for the Nova laser.** Wallerstein, E.P.; Baker, P.C.; Brown, N.J. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1229-1233(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Although assembly of the first two beams of Nova is just commencing, the optical production, including construction of the special facilities required for many of the components, has been underway for over three years, and many phases of the optical manufacturing program for the first 10 beams will be completed within the next two years. On the other hand, new requirements for second and third harmonic generation have created the need to initiate new research and development. This work has been accomplished through the enormous cooperation DOE/LLNL has received from commercial industry on this project.

25143 **Nova power systems and energy storage - 1.** Whitham, K.; Merritt, B.T.; Holloway, R.; Gritton, D.G.; Oicles, J.A. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1234-1237(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Nova Power System has been designed to meet several simultaneous goals: performance, cost, reliability and noise reduction. The approach has been to improve on known performance from the Shiva System and to thoroughly test each design under actual operating conditions. Subsystems have met their individual requirements in various tests. Most parts are on order in quantities for the first half of the Nova System.

25144 **Nova power systems and energy storage - 2.** Whitham, K.; Merritt, B.T.; Holloway, R.; Gritton, D.G.; Oicles, J.A. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1238-1240(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

To charge the Nova bank within 30 seconds as required for adequate bank lifetime, 25 to 30 MVA of dc power must be applied to the bank. Large substation sized power supplies have been designed to supply this much power at an efficient cost. Smaller, Shiva-type, 100 KVA supplies will be used to charge the modules for the rod amplifiers and rotators, but most of the bank will be charged by 12 large supplies (plus one spare) located in the substation areas outside the Nova Lab Building. All of these supplies are designed as three-phase voltage doublers. Each large supply is capable of charging 12 MJ of capacitors to 22 kV in thirty seconds. They are powered via a fused disconnect from the 13.8 kV ac power mains, and draw approximately 2.0 MVA peak power.

25145 **Nova front end subsystem.** Murray, J.E.; Kuizenga, D.J.; Downs, D.C. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1241-1243(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The NOVA front end is designed to provide highly reliable input pulses for each of the 20 amplifier chains with adequate drive and flexibility to provide all the required output variations of the total NOVA laser.

25146 **Nova alignment and laser diagnostics systems - 1.** Bliss, E.S.; Ozarski, R.G.; Myers, D.W.; Richards, J.B.; Swift, C.D.; Boyd, R.D.; Hugenberger, R.E.; Seppala, L.G.; Parker, J.; Dryden, E.H. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1244-1247(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The alignment and laser diagnostic systems guide laser pulses through the separate amplifier chains to the target, measure their temporal, spatial and energy characteristics, and ensure simultaneous arrival at the target to within 5 picoseconds. Alignment tasks accomplished prior to each target shot involve automatic or remote-manual adjustments of approximately 2000 stepper motors and other actuators for the full 20 beam, 3 wavelength system. The primary detectors for alignment functions are CCD cameras with both digital and standard video output. Diagnostic data handling and processing is accomplished digitally, and both the alignment and diagnostic systems are integrated into the facility-wide digital control network.

25147 **Nova alignment and laser diagnostics systems - 2.** Bliss, E.S.; Ozarski, R.G.; Myers, D.W.; Richards, J.B.; Swift, C.D.; Boyd, R.D.; Hugenberger, R.E.; Seppala, L.G.; Parker, J.; Dryden, E.H. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1248-1251(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Requirements for diagnostic-data acquisition and processing include rapid turnaround, effective interfacing with the alignment and power-conditioning controls, preservation of data under failure conditions, options for local or control-room modes of operation, and portability of the hardware required for off-line troubleshooting and calibration. The major elements of a digital system which meets these requirements are shown. A further potential difficulty, operating in the presence of prompt radiation from the target, has been avoided by locating all laser diagnostic components outside of the target room.

25148 **Nova frequency conversion system.** Summers, M.A.; Seppala, L.G.; Rienecker, F.; Eimerl, D.; Johnson, B.C. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1252-1256(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Frequency conversion of ND:glass lasers by harmonic generation is routinely used for generating intense visible and ultraviolet light. This article describes plans for implementation of harmonic generation on the Nova laser. The basic concept, scaling to large aperture and integration with the alignment and diagnostic systems are discussed. In addition, the multi-wavelength target focusing system is described.

25149 **Nova target systems.** Rienecker, F. Jr.; Field, J.E.; Williams, J.D.; Summers, M.A.; Singh, M.S.; Severyn, J.R.; Kane, J.F.; Dickinson, R.A.; Barna, E.A. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1257-1260(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper includes descriptions of the target chamber, beam-focusing lenses and positioners, the target support and alignment structure, target diagnostics, and control of the radiation environment.

25150 **Laser sequencing, synchronization, and safety systems.** Gritton, D.G.; Oicles, J.A.; Berbigler, L.W.; De Groot, A.J.; Smart, J.A.; Morton, J.W.; Christie, D.J. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1261-1264(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An overview is presented of the sequencing of Nova operations leading up to propagation of the optical pulse. Control techniques include check-lists, computer controlled sequencing, programmable logic timers and oscillator electronics. Ensuring personnel safety during laser operation is a safety interlock system which is designed to be both independent and compatible with the laser control systems.

25151 **Nova control system - goals, architecture, and central system design.** Suski, G.J.; Holloway, F.W.; Duffy, J.M.; Krammen, J.E.; Humphreys, C.A.; McGuigan, D.L.; Wilkerson, J.L.; Zaragoza, G.J. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1265-1269(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Control and data acquisition functions for the Nova Laser and Target Irradiation facility are performed by a distributed, hierarchically organized, network of computers and devices interconnected through high speed fiber optic communication links. The architecture established for this control system provides the flexibility within each of its fundamental subsystems (power Conditioning, Alignment, Laser Diagnostics and Target Diagnostics) to optimize internal design and organization according to their specific criteria. Control system integration, support of common functions, and centralization of operation are achieved using a fifth unifying subsystem called Central Controls.

25152 **Novanet, a local computer network, and Nova target data acquisition system.** Severyn, J.R.; Van Arsdall, P.J.; Calliger, R.J.; Demaret, R.D.; Hill, J.R.; Kroepfl, D.J.; Reed, R.K.; Ruddock, S.M.; Schaefer, W.J. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1270-1273(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This presentation covers two topics. The first is Novanet, a high speed, bit-serial, fiber-optic, distributed communication network used on the Nova laser alignment and diagnostic computer control system. Novanet provides multidrop capability between computers and remote interface devices, error detection on each data transfer, and low computer system overhead. Novanet is used on our distributed control system which includes 3 VAX 11/780 computers, approximately 50 LSI-11 processors and 15 charge coupled device (CCD) TV cameras. The second topic disscusses the Nova Target Data Acquisition and Vacuum Control System which uses CAMAC instrumentation interfaces and LSI-11 acquisition processors. Architecture, system design philosophy, control and data flow are presented.

25153 **Electron beam transport through the atmosphere in reduced-density, current-carrying channels.** Murphy, D.P.; Raleigh, M.; Laikin, E.; Greig, J.R.; Pechacek, R.E. (Jaycor, Alexandria, VA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1548-1551(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Successful propagation of an intense beam of relativistic electrons along a reduced-density, currrent-carrying channel in the atmosphere is reported. The path through the atmosphere the atmosphere is designed by laser-induced, aerosol-initiated air-breakdown using a Q-switched Nd:glass laser. The air along the path is heated by a high voltage discharge (/similar/250 kV) which is guided by the laser-produced preionization. As the hot air expands radially to form a reduced-density channel, a second lower voltage discharge (/similar/50 kV) is applied to the channel to create a B/theta/magnetic field around the channel. Intense relativitistic electron beams (REBs) injected concentrically into such channels are observed to propagate along the full length of the channel (/similar/100 cm).

25154 **Nuclear pumping of O/sub 2/(/sup 1//delta/) for laser fusion reactors.** Zediker, M.S.; Dooling, T.R.; Greenspan, E.; Miley, G.H. (Univ of Ill, Urbana, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1560-1561(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

An energy balance for a nuclear Pumped Laser driven inertial confinement fusion Reactor was performed to demonstrate the feasibility of such a device. The unique feature of this system is that nuclear energy rather than electrical energy is recycled to fuel the laser for the next pellet implosion. With a nuclear pumped O/sub 2/ - OI/sub 2/ laser, a pellet gain of /similar/40 is all that is required for the system to be energy self-sufficient. These low gain requirements are indeed very attractive for an ICF reactor.

25155 **Rates of loss of material from inertial fusion reactor surfaces exposed to pellet emissions.** Pendergrass, J.H. (Los Alamos Natl Lab, NM, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1616(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

New Computer Programs for more accurate estimation of rates of material loss from inertial fusion reactor cavity surfaces have been exercised to determine economic cavity sizes for commercial-applications pellet desings. Large loss rates can contribute subtantially to maintenance and total production costs. Modern Theory, with empirical factors to force agreement with limited experimental data, is used to estimate sputtering loss rates. A computer code, HOTWALL, that treats temperature-dependent physical properties, thermal transport of deposited energy, and arbitrary energy distributions and histories estimates evaporate loss rates.

25156 **Liquid jet experiments: relevance to inertial confinement fusion reactors.** Hoffman, M.A. (Univ of Calif, Davis, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1901-1904(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In order to try to find a reactor design which offered protection against neutron damage, studies were undertaken at LLNL (the Lawrence Livermore National Laboratory) of self-healing, renewable liquid-wall reactor concepts. In conjuction with these studies, were done a seris of small-scale aer jet experiments were done over the past several years at UCD (University of California, Davis Campus) to simulate the behavior of liquid lithium (or lithium-lead) jets in these liquid-wall fusion reactor concepts. Extropolating the results of these small-scale experiments to the large-scale lithium jets, tentatively concluded that the lithium jet can be re-established after the microexplosion, and with careful design the jets should not breakup due to instabilities during the relatively quiscent period between MICROEXPLOSIONS.

25157 **EPRI fusion program and its thrust in fusion engineering.** Scott, F.R. (EPRI, Palo Alto, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 11-14(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The primary objective of EPRI's Fusion Power Systems Program is to ensure the identification, selection, and development of fusion systems that can be used by the electric utility industry. The program highlights utility-oriented issues, such as power plant size, compatibility with utility grid, and maintainability. The major thrust of DOE's program has been large (1-GW(e) fusion power plants. The development of concepts in support of small systems could improve fusion's ultimate penetration capability. To implement its goals, the EPRI program is organized into three subprograms: magnetic confinement fusion, inertial confinement fusion, and analysis and technical development.

25158 **Results of an insulator materials test program for application inside the TFTR plasma chamber.** Renman, R.E.; Sredniawski, J.J.; Trester, P.W. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 222-225(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

There are many components inside the IFTR plasma chamber (i.e., bellows covers, bumper limiters, and surface pumps) that require dielectric materials to break up eddy currents caused by plasma disruption. These dielectrics must withstand elevated temperatures and yet be compatible with high-vacuum conditions. Evaluations have been performed under the TFTR upgrade effort to find dielectric materials that are suitable for use as insulators within a Tokamak. After an extensive search, several types of polyimides and inorganic bonded mica were identified as candidates and selected for test. This paper summarizes test results and describes the manner in which they are being used to evaluate candidate insulator design concepts.

25159 **Limiter, of dense and high thermal conducting material, for a fusion reactor.** Bogensberger, H.G.; Schmidt-Hansberg, Th.; Schoenfeld, R. (NUKEM, Hanau, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 236-238(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The work performed at the NUKEM laboratories proved that the production of dense and high thermal conducting limiter tiles is possible in principle. Some experiments, concerning the thermo shock resistivity, showed no failure of the material due to cracks or peeling. Before starting manufacture on a large scale however, several steps in the production have to be optimized to ensure a proper quality of the material. Use of graphite on a limiter material is recommended.

25160 **Fatigue testing of TFTR vacuum vessel bellows.** Rappe, G.H.; Brown, G.; Perry, E.D. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 240-243(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The T.F.T.R. Vacuum Vessel is made up of ten segments which in turn are bolted and welded together to form a complete torus. For various design reasons these segments or rigid sectors are not identical, but vary in shape and configuration of the component parts. The fourteen bellows are installed in locations which facilitate segmentation of the torus if this becomes necessary due to some mishap to the vacuum vessel, or should one of the toroidal field coils develop a fault. The integrity of the vacuum, and the ability to develop and maintain a plasma within the torus depends upon the quality of these bellows, therefore it was decided to perform a series of fatigue tests to experimentally verify that the design was adequate for the continued operation of T.F.T.R. This paper describes the tests already performed, a description of the test fixture and tests planned for the future.

25161 **Initial thermal outgassing properties of aluminium between 20/degree/c and 320/degree/c.** Reiter, F.; Camposilvan, J. (Comm of the Eur Communities, Ispra, Italy). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 244-247(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Initial thermal outgassing properties are important during the start-up phase and during the operation phase of thermonuclear fusion reactors. The equilibrium surface coverage determines the contamination of the fuel gas during the start-up phase, the equilibrium outgassing rate determines the contamination by surface outgassing during reactor operation. The experimental investigations are presented and equilibrium surface coverages have been calculated from these results.

25162 **Thermal and mechanical testings of TiC and TiN coating materials with Mo substrates.** Gomay, Y.; Koizumi, H.; Ishihara, H. (Toshiba Corp, Kawasaki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 248-251(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Thermal and Mechanical characteristics of TiC and TiN coating materials with Mo substrates are reported. The coating method applied is chemical vapor deposition. In the case of TiC coating, thin TiN layers were coated before TiC coating to avoid formation of molybdenum carbide during TiC coating. thermal testing by electron beam showed that both the TiC-TiN and TiN coating layers survived without observable erosion till the substrates were melted.

25163 **Electron assisted methane production on carbon surfaces.** Auciello, O.; Haasz, A.A.; Stangeby, P.C.; Underhill, P.R. (Univ of Toronto, Ont, Can). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 252-254(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Results are reported on the production of methane due to electron bombardment or electron plus atomic hydrogen/deuterium bombardment of technical grade and crystalline graphite. It was found that both graphites gave very high methane yields, after mild baking, due to electron impact only with or without simultaneous atomic bombardment. The origin of this methane is evidently hydrogen or hydrogen-containing compounds already in the graphite or on the surface. After a very strong baking of the technical grade graphite and moderate baking of the crystalline graphite, the methane yield, under electron impact only, was greatly reduced to a residual level. When such strongly degassed graphite was exposed to simultaneous electron and atomic bombardment, a small electron/gas atomic hydrogen/graphite synergistic production of methane was observed. The present work is aimed at further elucidating this synergistic effect and at identifying the origin of the hydrogen causing the formation of CH/sub 4/.

25164 **Fatigue data of molybdenum.** Kimishima, T.; Sukekawa, M.; Owada, K.; Shimizu, M.; Nakamura, H.; Masuda, M. (Hitachi Ltd, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 255-258(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The first walls of JT-60 are determined to be pure molybdenum, but information is lacking on mechanical properties of molybdenum, especially the data of fatigue strength at high temperature. This study performs the low cycle fatigue test at high temperature. According to the results, the first walls have no serious problem with respect to the fatigue life.

25165 **Plasma engineering considerations for an inside-barrier tandem mirror test facility.** Santarius, J.F.; Emmert, G.A. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 483-486(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The effects of technology limitations on the design of a tandem mirror, aimed at testing materials and pertinent reactor technology on a 1990's time scale, are presented. Parameters for a reference case device and parametric variation of some important quantities are exhibited. Particularly important considerations are magnetic field limits, neutral beam injection angles, ECRH and ICRH systems, alpha particle removal, fueling, and stability criterion.

25166 **Redeposition of the sputtered surface in limiters.** Brooks, J.N.; McGrath, R.T. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 495-498(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Erosion of the surface coating of a pumped limiter by sputtering may be a critical life-limiting issue for future tokamak reactors. Redeposition of the sputtered material, however, may extend the coating life significantly. This subject has now been studied through the use of a code which models the redeposition of sputtered material which gets ionized in the scrape-off lyer. The studies were made for 'high flux' and 'low flux' edge conditions corresponding to FED and STARFIRE limiters and assumed plasma-edge parameters. The results indicate that substantial redeposition from the scrape-off layer ionized neutrals occurs in the cases considered.

25167 **Plasma control techniques of the ASDEX feedback system.** Schneider, F. (Max-Planck-Inst fuer Plasmaphys, Garching, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 503-506(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In the ASDEX tokamak the shots are exactly preprogrammed and most of the disturbances are reproducible. So a computer can learn from one shot how to correct the next one. With this sort of disturbance feedforward one can also introduce a 'negative delay' in the program to compensate even fast and strong disturbances withous unwanted overswing or oscillations. The feedforward in conjunction with feedback control allows production of a magnetically limited plasma from the very beginning without any wall or limiter contact. This is a reason why in ASDEX the loop voltage on breakdown can be as low as 5 V/sup 2/. The plasma column can be controlled in the vacuum vessel even after disruptions have occurred.

25168 **Status of Doublet III data archival and retrieval system.** Shephard, G.W.; Karin, S. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 601-603(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Doublet III Data Archival and Retrieval System was written to provide both data archival and data access functions for the General Atomic Company large-scale fusion device, Doublet III. This large tokamak nominally generates two million bytes of data every five minutes, 14 hours per day during operation. A typical five-day week produces between 600 and 1200 megabytes of data to be archived. At present, over 20,000 shots are in the archival system, a total of approximately 40 Gigabytes. The development and evolution of this system is discussed in three parts: current status, history of the system, and future plans.

25169 **Data collection system for a tokamak fusion experiment.** Huckins, R.; Roberts, D.; Ryan, H. (Nucl Data Inc, Schaumburg, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 604-607(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Nuclear Data Extended List Acquisition System has been in use since June, 1980, at the ASDEX fusion experiment, Max Planck Institute for Plasma Physics, Garching, West Germany. The system records the soft x-ray radiation produced by the plasma. The data is generally processed into multiple time-scaled PHA spectra, from which plasma density, temperature, and impurities can be determined for various times and locations. The system was designed around standard PHA computer components into a versatile, expandable high-speed acquisition system. This paper describes the basic architecture and operation of the system, and various modifications in progress which adapt it to changing experimental requirements.

25170 **Diagnostic timing system for the TMX-Upgrade.** Bell, H.H. Jr.; Coutts, G.W.; Hinz, A.F. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 608-610(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This system provides trigger signals at various times and clock signals at various frequencies for the CAMAC transient recorders of the plasma diagnostics system for the TMX-Upgrade. The timing system is designed so that all clocks are in fixed-phase relation to their corresponding triggers and to each other. Therefore, data recorded from the different diagnostics can be directly time compared. Trigger signals can be generated in 100-ns increments, with an uncertainty of 500 ps. The clock signals have a time uncertainty of less than 1 ns. The system is arranged so that these accuracies are maintained over the entire diagnostic room. The timing system is modular and uses mostly digital delay generators, signal fan outs, and frequency dividers.

25171 **Analysis and design of a pumped-limiter impurity-control system for EBTR.** Driemeyer, D.E.; Stones, P.B.; Krakowski, R.A. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 696-699(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Pumped-limiter impurity-control concepts have recently gained interest in the tokamak community, primarily as a result of encouraging experimental measurements of particle removal by pumped-limiter configurations together with the reduced impact, relative to magnetic divertors, that pumped limiters have on the overall system complexity and cost. The characteristics also apply to the EBT where the close coupling of plasma transport, magnetic topology, and the electron rings give added impetus to assessing a nonmagnetic impurity control system. This paper discusses physics, engineering, and design considerations associated with the incorporation of a pumped limiter system in an EBT reactor. Models which have been developed to describe the interplay between the limiter, the plasma, and other reactor subsystems such as those for vacuum pumping and limiter/first wall cooling are presented along with a brief description of the resulting EBTR limiter configuration.

25172 **Physical sputtering code for fusion applications.** Smith, D.L.; Brooks, J.N.; Post, D.E.; Heifetz, D.B. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 719-722(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A computer code, DSPUT, has been developed to compute the physical sputtering yields for various plasma particles incident on candidate fusion reactor first-wall materials. The code, which incorporates the energy and angular-dependence of the sputtering yield, treats both high-and low-Z wall materials. The physical sputtering yield is expressed in terms of the atomic and mass numbers of the incident and target atoms, the surface binding energy of the wall materials, and the incident angle and energy of the particle. An auxiliary code has been written to provide sputtering yields for a Maxwellian-averaged incident particle flux. The code DSPUT has been used as part of a Monte Carlo code for analyzing plasma-wall interactions.

25173 **Conceptual design of the INTOR first wall system.** Smith, D.L.; Majumdar, S.; Mattas, R.F.; Turner, L.; Jung, J.; Abdou, M.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 723-727(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The design concept and performance characteristics of the first wall design for the phase-1 INTOR (International Tokamak Reactor) study is described. The reference design consists of a water-cooled stainless steel panel. The major uncertainty regarding the performance of the bare stainless steel wall relates to the response of a thin melt layer predicted to form on limited regions during a plasma disruption. A more complex backup design, which incorporates radiatively cooled graphite tiles on the inboard wall, is briefly described.

25174 **U.S. INTOR divertor design.** Mattas, R.F.; Abdou, M.A.; Brooks, J.N.; Gohar, Y.; Misra, B.; Smith, D.L.M.; Bowers, D.; Delaney, M.; Grewing, C.O.; Morgan, G.D. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 728-731(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The impurity control system in INTOR is a single null poloidal divertor. The total power to the divertor is 80 MW, primarily in the form of ionized particles that have escaped from the plasma. The ionized particles strike the divertor collector plates, resulting in high surface heating and sputtering that limits the lifetime to approximately 2 yr. This short lifetime means that the plates must be replaced several times during the reactor life, and, therefore, the divertor module has been designed to be replaced independently of the other reactor components. The divertor collector plates have been analyzed in detail, and the results of thermal and stress calculations are presented.

25175 **INTOR radiation shielding for personnel access.** Gohar, Y.; Abdou, M.A. (Argonne Natl Lab, IL, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 740-743(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Since penetration shield significantly affects reactor cost, personnel access, and reactor availability, elaborate three-dimensional radiation calculations for the whole reactor system, including the neutral beams, divertor system, toroidal field coils, and reactor building liner, were carried out. The general-purpose Monte Carlo code MCNP was used for the calculations with a continuous energy representation for the nuclear cross section from ENDF/B-IV. The INTOR reactor shield system consists of the blanket, bulk shield, penetration shield, component shield, and biological shield. The bulk shield consists of two parts: (a) the inboard shield; and (b) the outboard shield.

25176 **Experience from the implementation of a control- and data acquisition system for the tokamak TEXTOR.** Bohn, F.H.; Halling, H. (Kernforschungsanlage Juelich, Ger). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 880-883(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A modular and distributed control and data acquisition system, including also such system components which had been successfully operated elsewhere, has been designed and implemented for the TOKAMAK TEXTOR. The present paper concentrates on experiences gained during the evolution of the TEXTOR control and data acquisition system, in particular the selection of system components, system structuring, software management, final integration and operation. The applied solutions are described. The effort in terms of time and cost has been analyzed and is discussed, aiming for an assessment of the required effort for future systems. Finally the system is discussed on the basis of the practical experiences gained during its use especially for the start-up phase of TEXTOR.

25177 **System design of ZENKEI, the central control system for JT-60.** Suzuki, Y.; Kondo, I.; Ogata, A.; Kimura, T.; Hatakeyama, T.; Murai, K.; Iba, D. (Jpn At Energy Res Inst, Tokai). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 884-886(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The ZENKEI, the central control system of the JT-60, supervises various control subsystems and maintains harmonious operation of subsystems under plasma discharging. It has the following three main roles: (1) Supervisory control of the JT-60, (2) Safety interlocks for the JT-60, (3) Realtime control for the JT-60. This paper gives a brief description of the system structure and its functions, especially that of plasma discharging control as the consequence of the most recent designings.

25178 **Device configuration management system.** Nowell, D.M. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 890-893(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Fusion Chamber System, a major component of the Magnetic Fusion Test Facility, contains several hundred devices which report status to the Supervisory Control and Diagnostic System for control and monitoring purposes. To manage the large number and diversity of devices represented, a device configuration management system was required and developed, key components of this software tool include the MFTF Data Base; a configuration editor; and a tree structure defining the relationships between the subsystem devices. This paper will describe how the configuration system easily accommodates recognizing new devices, restructuring existing devices, and modifying device profile information.

25179 **Design concept of real-time plasma control for JT-60.** Hosogane, N.; Yoshino, R.; Kurihara, K.; Kimura, T.; Ogata, A.; Yonekawa, I.; Aikawa, H.; Kondo, I.; Suzuki, Y. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 904-907(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The real-time system of the JT-60 has a cascade structure with the major and the minor control loops. The multi-variable feedback control is adopted in the major control loop in order to adjust non-linear effects which will appear in the high-/beta/region. By applying the concept of 'phase shift control' to the control program of the major control loop, a flexible tokamak discharge control is expected to be performed with taking account of machine protection.

25180 **Optimization of sequential control in operation of fusion device.** Kimura, T.; Ogata, A. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 908-912(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A computer code for finding optimum sequence of operation of a fusion device is developed. The dynamic programming technique is adopted for optimization of the sequence control. An estimate of the necessary number of steps and cost is made for a case

of the evacuation process of the vacuum vessel. The parallel operation of two or more machines are considered.

25181 **Experimental study on feedback control system of plasma position.** Abe, M.; Otsuka, M.; Nishi, M.; Kanamori, T.; Kobayashi, T.; Uchikawa, S. (Hitachi Ltd, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 916-919(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Performance of the feedback control system for the horizontal plasma position in the small shell-less tokamak, HT-1, has been studied numerically and experimentally. Emphasis was put on verifying the validity of coupling parameter evaluation methods for poloidal field coils and structures such as the vaccum vessel and the transformer iron core. The effect of the iron core on the poloidal field distribution was analyzed numerically. Mutual inductances between poloidal field coils and structures were obtained from the calculated eddy currents. Using these calculated parameters, the indicial response of the feedback control loop was studied analytically. Good agreement between calculations and experiments was obtained.

25182 **Control and data acquisition systems for the S-1 spheromak.** Woolley, R.D. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 924-927(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper discusses present plans and describes requirements for S-1 operating controls and data acquisition systems. The plans cell for implementation of these functions in separate computer and CAMAC systems, strongly coupled to one another via a CAMAC interface. Detailed design is still in progress on several subsystems which will be operated or monitored by S-1 operating controls; thus, the description herein is somewhat preliminary, is subject to change, and probably will require updating one year hence.

25183 **PDX operating controls.** Mathe, P.; Robertson, R.; Woolley, R.D. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 928-931(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Poloidal Divertor experiment began operation in November 1978. Some of the operating controls were in working condition a year before that date for power tests. In fact, a very similar system to the one used for PDX operated the FM-1 experiment as early as 1971. The functional block diagram of the PDX operating controls is shown. The operating console provides the man-machine interface during the experiment. Most status lights and pushbotton controls are directly interfaced to the IBM 1800 computer. This computer in conjunction with an IPC-300 programmable controller and a CAMAC serial highway system, performs the supervisory and control functions associated with the various PDX subsystems.

25184 **TFTR diagnostic vacuum controller.** Olsen, D.; Persons, R. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 932-935(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR diagnostic vacuum controller (DVC) provides in conjunction with the Central Instrumentation Control and Data Acquisition System (CICADA), control and monitoring for the pumps, valves and gauges associated with each individual diagnostic vacuum system. There will be approximately 50 systems on TFTR. Two standard versions of the controller (A and B) wil be provided in order to meet the requirements of two diagnostic manifold arrangements. All pump and valve sequencing, as well as protection features, will be implemented by the controller.

25185 **PDX diagnostic control system.** Mika, R. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 936-940(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper describes a computer-base diagnostic control system operating on the PDX Tokamak. The prime function of the system is to control mechanical positioning devices associated with various diagnostics including Thomson Scattering, X-Ray Pulse Height Analyzer, Rotating Scanning Monochromator, Fast Ion Detection Experiment, Bolometers and Plasma Limiters. The diagnostic control system consists of a PDP-11/34 computer, a CAMAC system partitioned between the PDX control room and the PDX machine area, and special electronic control modules developed at PPL. The special modules include a digital closed loop motor controller and user interface control panel for control and status display. A standard control panel was developed for interfacing each system user with the PDP-11/34 computer, through specially developed CAMAC modules.

25186 **Software requirements of the central control system computer for the TEXT tokamak.** Terry, D.R.; Dietz, T.E.; MacMahon, A.B.; Hutchins, H.S. (Univ of Tex, Austin, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 954-957(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Central Control System computer for the Texas Experimental Tokamak (TEXT) serves as the primary operator interface to the Central Control System. It is used to monitor and display control-system status and allows rapid programing of the digital 'shot' sequencing timers and microprocessors-based analog pulse generators and data logger systems. The computer is used for operator displays and 'shot' parameter editing functions, operator command entry functions, and charging and firing cycle initialization functions. Maintenance of reference 'shot' parameters and analog pulse generator waveform data is also accomplished using the computer. The analog pulse generator and data logger systems contain adequate RAM for both application program and data for one 'shot', as well as the firmware necessary for communication with the control system computer. The control system computer loads these systems with data and applications programs before each 'shot'. The implementation of these system functions is discussed.

25187 **Digitally controlled twelve-pulse firing generator.** Berde, D.; Ferrara, A.A. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 969-972(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Control System Studies for the Tokamak Fusion Test Reactor (TFTR) indicate that accurate thyristor firing in the AC-to-DC conversion system is required in order to achieve good regulation of the various field currents. Rapid update and exact firing angle control are required to avoid instabilities, large eddy currents, or parasitic oscillations. The Prototype Firing Generator was designed to satisfy these requirements. To achieve the required /plus or minus/0.77/degree/firing accuracy, a three-phase-locked loop reference was designed; otherwise, the Firing Generator employs digital circuitry. The unit, housed in a standard CAMAC crate, operates under microcomputer control. Functions are performed under program control, which resides in nonvolatile read-only memory. Communication with CICADA control system is provided via an 11-bit parallel interface.

25188 **CAMAC-based interlock system for power supply hardware protection on MFTF.** Straunch, M.S. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 989-992(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In keeping with the CAMAC-based local control and instrumentation scheme developed for MFTF, a CAMAC module with support has been designed and developed for power supply protection on MFTF. Incorporated in a CAMAC module, these tech-

niques provide a very reliable, modular and flexible interlock approach.

25189 **Low noise, high impedance, dc coupled auto zeroing amplifier for TFTR.** Marsala, R.J. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 993-996(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The requirements, design, and test results of a low noise amplifier, used to amplify signals from a wideband liquid helium cooled indium antimonide (InSb) detector used to measure the electron temperature profile in TFTR, are described. Detector resistance changes are monitored by passing a constant current through the detector and measuring the voltage across the detector. The amplifier is comprised of two separate sections. The dc coupled section consists of a low noise non-inverting amplifier with a gain of 1000 and an auto-zero feedback loop. The ac coupled section consists of an ultra low noise amplifier comprised of a multiple FET input stage followed by a low noise operational amplifier.

25190 **TFTR structural instrumentation.** Brown, G.M. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 997-999(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The structural instrumentation of TFTR is primarily designed to provide response data during initial system operation. This information will be used in the verification of design specifications and in the determination of machine operating levels. Raidation hardness and measurements under plasma disruption conditions are not included in the test specifications. In those regions where relatively high stresses occur during disruptions, and where strain gages have been installed; signal conditioning under development at present, will be installed.

25191 **Small CAMAC-based data acquisition system.** Brown, G.M. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1000-1002(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

In most research laboratories, it is desirable to have available in a general purpose and easily utilized data acquisition, reduction and display system (DAS). A central system is usually utilized for large experiments however, a dedicated system is often more convenient for smaller applications. A relatively simple and inexpensive DAS is discussed, based on CAMAC modules and an 8 bit microprocessor. This system is fully CAMAC compatible and could be easily connected to a central system data highway, using an auxiliary crate controller.

25192 **Data acquisition system of TFR tokamak experiment.** Breton, J.; Cohen, A.; Hennion, F.; Idmtal, J.; Touche, J. (CEA, Fontenay-aux-Roses, Fr). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1015-1017(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The data acquisition system for the TFR experiment has been in operation since 1973. This system allows to store the shots on disks and on magnetic tapes and to display, immediately after each shot, the main parameters of the plasma : plasma current evolution, plasma displacements, loop voltage, electronic density, electron and ion temperatures. A new system composed of two Solar minicomputers, from the SEMS French company, connected to a large capacity disk is described. The great versatility and reliability of this system has been emphasized, and main effort is devoted in this area, in order to meet the two dominant requirements of an experiment such as TFR : permanent evolution and complexity of the diagnostics.

25193 **High speed digital data acquisition system on Alcator.** Besen, P.D.; Grearson, P.D. (MIT, Cambridge, MA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1018-1021(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper deals with a data acquisition system currently under development at the MIT Plasma Fusion Center, for use by the Alcator experiment. It explains the motivation for such a system and outlines the design considerations formulated for the system. The system is CAMAC based, and consists of both standard (off the shelf) and in-house developed hardware. The major components include dedicated display stations, crate based display controllers, CAMAC serial highway hardware and the CAMAC BASED acquisition hardware. One of the major advantages of this system is the ability to process and display raw data from recently completed shots without the intervention of the Alcator central computer facility. This allows experiments to examine large amounts of data during a machine run and make run time adjustments to their experiments.

25194 **Method for transmitting analog data over a fiber-optic link.** Dyer, G.R. (Oak Ridge Natl Lab, TN, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1026-1029(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The transmission of high-speed analog dat across an insulating break is a common requirement for present fusion experiments, and it will be a necessity for a reactor-like device. Presently available systems tend to be complex, slow, and expensive. A method is described for implementing a fiber-optic link with analog data input and output. Two realizations of the method are given. A medium-speed system using monolithic circuitry is capable of a dc to 20-KHz bandwidth with excellent linearity and a dynamic range of at least 60 dB. A higher-speed system uses some discrete circuitry to attain a 500-KHz bandwidth with at least a 40-dB dynamic range. Both systems use a relatively inexpensive digital optical link kit combined with a duty cycle modulation scheme for data tramsmission. This method achieves accurate reproduction of complex waveforms without introducing the quantization errors inherent in analog-to-digital conversion, offers bipolar response with low offset and drift, and maintains a constant bandwidth regardless of signal level.

25195 **Wide band fiber optic analog data link.** Cutsogeorge, G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1030-1033(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A link has been developed that can transmit analog data over a 220 meter fiber optic cable. This is suitable for general diagnostic work. The transmittig end will accept /plus or minus/volt signals on a 50 ohm line and present them to a 50 ohm load at the receiving end of the link. D.C. characteristics of the signal are preserved by an auto-zero loop.and the high frequency cut off is 16 MHz. The overall signal to noise ratio is 59dB and the total harmonic distortion is 0.36%.

25196 **CAMAC timing and sequencing module.** Lawson, J.E. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1034-1037(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Timing and Sequencing Module is a general purpose dual mode CAMAC module, designed to provide a serial sequence of time related trigger or variable width pulse outputs. In mode 1 the output is a series of up to 1024 fixed width pulses with the pulse-to-pulse separation determined by a stored program. In mode 2 up to 512 pulses can be generated with both the pulse-to-pulse separation and the pulse width variable, and controlled by a stored program. It is possible to use this module with its internal 100kHz clock or with an external clock. The module is also capable of retriggering itself at end of each timing cycle up to a maximum of 255 times.

25197 **CAMAC analog signal conditioning module.** Pearson, G.G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1038-1039(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The CAMAC Analog Signal Conditioning Module is designed to reside in a CAMAC crate and function as a precisely defined interface between signal sources and transient digitizers. Programmable gain, programmable offset voltage, and program selectable output filters are all provided to allow the individual user to configure this module to fit the requirements of his system. Several commercially available modules were evaluated before the decision to build present module was made.

25198 **Data processing system for JT-60.** Ogata, A.; Toyokawa, R.; Nishitani, T.; Kumahara, T.; Tahira, S.; Kambe, T.; Mochizuki, O.; Tahara, N.; Fujioka, A.; Fujita, M. (Jpn At Energy Res Inst, Ibaraki). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1047-1050(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The data processing system for the large tokamak JT-60 has hierarchical structure of a duplex of general-purpose computers and 16 bit microcomputers housed in CAMAC modules. It is characterized by 1) real-time ability to process diagnostic data to feed the results to the control computers for plasma control purpose; 2) recording of all the raw diagnostic data into a PCM recorder; 3) use of high-speed optical fiber links for transmission of data and timing signals; 4) equipment of large general purpose computers with powerful data management and analysis ability; etc.. The number of diagnostic devices is approximately 30, the total number of channels is approximately 22,000 and the amount of raw data is approximately 100 MB/shot.

25199 **Fabrication of the TFTR vacuum vessel.** Reddan, W.; Stoenescu, S.; Warren, J.G.; Nagy, W.; Scott, H. (Ebasco Serv Inc, Princeton, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1369-1372(1981). (CONF-811040-).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A brief description of the vacuum vessel design and fabrication sequence are reported. Some of the unique aspects of the fabrication are described and photographs of the vessels at various stages of the fabrication are included.

25200 **Tokamak limiter design.** Cecchi, J.L. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1378-1382(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The plasma/limiter interaction, which forms the basis for much of the limiter design, is discussed within the framework of a simple model which predicts particle and energy fluxes in the edge region of tokamak plasmas. Experimental data relevant to the model are presented. Specific applications of energy flux distribution for three configurations of TFTR limiters (toroidal, poloidal, and segmented toroidal) are examined.

25201 **Design and analysis of the TFTR fixed limiters - 1.** Winkler, P.; Fixler, S.; Timlen, W.V. (Ebasco Serv Inc, Princeton, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1383-1386(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The operation of the Tokamak Fusion Test Reactor (TFTR) consists of two phases. In the first phase, the Tokamak systems will be tested and an ohmic heated plasma of 4 MW produced. The plasma limiter system for this phase consists of a set of movable and a set of fixed limiters. Because of the low power level during this phase, a design of passively cooled fixed limiters without tiles will satisfy the requirements. This limiter will be replaced by an actively cooled tile-covered axisymmetric limiter in the second phase. This paper discusses the design of the first phase fixed limiters only.

25202 **Design and analysis of the TFTR fixed limiters - 2.** Winkler, P.; Fixler, S.; Timlen, W.V. (Ebasco Serv Inc, Princeton, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1387-1389(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The idealized slat/dielectric/rail assembly is represented by two-dimensional thermal model. Because the plasma thermal load is not uniform over the slat, thermal symmetry could not be used in the analysis. The slat thickness was modeled with a variable-thickness mesh having seven nodes at the thinnest cross-section and 10 nodes over the rails. Each slat has 18 nodes in the toroidal direction. The rails were modeled with a 3 by 2 mesh (excluding the poloidal direction) and one node in the stem of the T. There is a total of 156 nodes for each slat/rail assembly.

25203 **Cryopumps for JET - design of a large scale system of open configuration for high specific pumping speed.** Obert, W.; Rebut, P.H.; Duesing, G. (JET Jt Undertaking, Abingdon, Oxfs, Engl). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1390-1393(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Large scale cryopumpsystems with a pumping speed exceeding 6*10/sup 6/ls-/sup 1/ and a pumping area of 40m/sup 2/ will be installed in each of the Neutral Injector Boxes to be installed at JET. For the design of this advanced cryopump configuration solid angle considerations, Monte Carlo calculations and light simulation measurement have been carried out. The performance data of the configuration have been confirmed by tests on model cryopumps which also included tests in the presence of a high energetic particle beam.

25204 **Mechanical response of cavity tube banks in heavy ion beam fusion reactors.** Engelstad, R.L.; Lovell, E.G. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1556-1559(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The heavy ion beam ICF reactor HIBALL incorporates an annular array of vertical tubes between the cavity per se and the first structural wall. These tubular components (INPORT units) are fabricated from porous woven silicon carbide. Liquid LiPb flows within the units and through the porous walls to form a protective exterior surface film. X-rays vaporize a portion of this layer resulting in an impulsive pressure on the tubes. This paper is concerned with the mechanical response of the SiC INPORT units from this dynamic loading.

25205 **Ceramic torodail vacuum chamber and wall conditioning for the ETL-TPE-2 experiment.** Kiyama, H.; Kiyama, S.; Hakoda, K. (Electrotech Lab, Ibaraki, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1562-1565(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

TPE-2 is a torodial high /beta/screw pinch experiment with an ellitical cross section. This paper presents the design and the fabrication of the torodial ceramic vacuum chamber, the outline of the vacuum system and of major radius of 40 cm and an elliptical cross section of 28 cm.

25206 **Bakeable optical windows for the tokamak fusion test reactor.** Mozeleski, M.; Lewin, G. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1577-1580(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

During the device's life, numerous high temperature bakes will be performed in order to maintain a base pressure of 10/sup -

8/ Torr. Also, when the device enters the radioactive mode of operation, a high density flux of neutron and gamma particles will be emitted from the plasma. This paper discusses the diagnostic window materials chosen for use on TFTR. The discussion includes the mounting method of each type window as well as the testing performed on the window assemblies.

25207 **Design and mechanical analysis of TORE SUPRA vacuum vessels and limiters.** Aymar, R.; Cordier, J.J.; Deschamps, P.; Gauthier, A.; Leloup, C.; Libeyre, P. (CEA, Fontenay-aux Roses, Fr). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1581-1584(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

TORE SUPRA is the new French Tokamak supported by EURATOM. The use of supraconducting coils leads to a complex vacuum system which is described here. The paper reports the main mechanical calculations and how they interfered with the design.

25208 **Leak detection inside a vacuum vessel.** Obara, K.; Abe, T.; Itou, Y.; Iwama, J. (Jpn At Energy Res, Inst, Tokai). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1585-1588(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A facility for leak detection inside a vacuum vessel is developed. It will take the place of conventional helium leak detection method. The facility consists of several devices; a unidirectional detector (a sensor), a vacuum tight manipulator, a simulated defect, a vacuum vessel with a turbomolecular pump system and others. Leak detection experiment on the facility was performed and the position of 3.0*10/sup -///6Torr/BULLET/1/sec helium leak was detected on condition that the sensor was at a distance of 18mm from the defect, and the pressure in the vacuum vessel was 5.0*10/sup -8/Torr.

25209 **Thermal and structural analysis of solid divertor targets for e-beam testing.** Lee, A.Y.; Chianese, R.B.; Easoz, J.R. (Westinghouse Electr Corp, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1593-1596(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The objective of the study is to investigate the thermal and structural characteristics of the molybdenum tube under high steady state heat fluxes and cyclic thermal loads. The program included: 1) performing thermal and stress analyses of candidate target geometries in order to select one design for testing; 2) fabricating the assembly and conducting heat transfer experiments using the Westinghouse examinations of the test specimen and performing test data analysis. Several candidate collector target data analysis. These include a plain molydbenum tube, a molybdenum tube with external fins, a copper-molybdenum composite tube and niobium tube of the same dimensions as the plain molybdenum tube. Based on the results of the analysis of the various geometries the plain molybdenum tube was selected to be tested. The test program is presently in progress.

25210 **Design of actively cooled limiters for Alcator A and C.** Morgan, G.D.; Bowers, D.A.; Davis, J.W.; Delaney, M.J.; Ruester, D.E.; Stones, P.B.; Yang, T.F. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1597-1600(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A study was conducted to define a preconceptual design of an actively cooled limiter for Alcator A and C application. The design concepts and structural materials examined are described. The results from thermal-hydraulic and structural analyses of the design/material combinations evaluated are presentd and discused. The limiters reach virtually steady state temperatures far below the melting point, by the end of the assumed 0.5 s discharge. The design recommended for further study is simple to fabricate and HYAS a predicted fatigue life greater than, 10,000 discharge/cool-down cycles.

25211 **Design and test results of an in-torus zirconium/aluminum getter pump system for PDX.** Sredniawski, J.J.; Cecchi, J.L.; Dylla, H.F. (Grumman Aerosp Corp, Bethpage, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1601-1604(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A description of the TFTR Surface Pumping System was presented at the 8th Symposium on Engineering Problems of Fusion Research. This system consists of 36 pumping panels distributed within the vacuum vessel. To enhance plamsa impurity and density control, pumping is achieved by means of corrugated water modules coated with St 101, zirconium/aluminum alloy powder./sup 2/. Since gettering in this manner has never performed within a Tokamak, a prototype experiment was performed in PDX at Princeton. This paper describes the design, installation, and testing of the prototype pumping panels in PDX.

25212 **Full-scale model of cooling and heating system for JT-60 vacuum vessel.** Kajiura, S.; Owada, K.; Sato, H.; Furuyama, M.; Yamamoto, M.; Shimizu, M.; Ohta, M.; Iijima, T. (Hitachi Ltd, Jpn). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1637-1640(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

A full-scale model of a rigid sectorial ring and a set of bellows which was covered with a temperature control layer and a coolant supply equipment was constructed to verify the adequacy of the heating and cooling system designed for JT-60. To cool and heat it effectively and to decrease the temperature differences among the various parts in the vacuum vessel, heater units and cooling pipes were located on the surface of the ring. The temperature control layer is to heat the vessel to 500/degree/sub //C within 70 hours and to maintain it at the temperature for 48 hours for simulating the state of bakeout. Subsequently the vessel is cooled down within about the same time as in heating. Prior to the series of tests, numerical analyses were performed to predict the cooling and heating efficiencies on the model and to examine the method of the temperature regulation.

25213 **Fabrication of the torus assembly for the OHTE confinement experiment.** Curwen, B. (Gen At Co, San Diego, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1645-1648(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The ohmically heated toroidal experiment (OHTE) is an alternate magnetic confinement fusion concept being developed at General Atomic. A confinement test experimental device has been assembled and physics testing was initiated in early 1981. The device is of modular design and incorporates an E-Coil solenoid, poloidal field coils and a torus assembly all supported by a pedestal. The torus assembly consist of the plasma chamber, conducting shell, and the helical coils. This paper describes the manufacturing techniques for the torus assembly components and also the tolerancing system.

25214 **Engineering and design aspects of the TFTR vacuum vessel bakeout and cooling system.** Reddan, W.; Stoenescu, S. (Ebasco Serv Inc, New York, NY, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1649(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

This paper presents the engineering and design aspects of the TFTR-Vacuum Vessel Cooling Systems (the Shell System and the Bellows System) and the bakeout System. The fabrication of the systems is presently under construction at Chicago Bridge and Iron, Greenville, PA. A previous described the preliminary fluid (dry air and nitrogen) systems used to cool and heat the Vacuum Vessel.

This paper updates the previous one. The emphasis is on the engineering approach, evaluation and design related to the three major operational scenarios of the TFTR, namely - Normal Operation, Discharge Cleaning and Bakeout. This paper presents the cooling and heating loads, the flow distribution, one-dimensional temperature distribution evaluation, poloidally and toroidally, a bakeout scenario and the corresponding design solutions, such as the heating/coolilng jacket, diagnostic covers with remote jumper lines, access plates and adjustable orifices in order to balance the flow.

25215 **TFTR neutral beam calorimeter fabrication and instrumentation.** Perry, E.D.; Brown, G.M.; Dudek, L.E. (Princeton Univ, NJ, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1662-1665(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The TFTR Neutral Beam Calorimeter were designed by Lawrence Livemore Laboratory and Lawrence Berkeley Laboratory, but while the production units were being fabricated by the Plasma Physics Laboratory, several design changes were made. The major alterations included a detailed examination of the braze joints and cooling tubes along with techniques for inspecting the joints, and changing the temperature measurement instrumentation from thermistors to thermocouples. In addition, the water pipes were changed from custom bent pieces to assemblies of off the shelf street elbows and metal bellows, the motor control wiring was reworked to interface with the various TFTR control systems, and a second set of guide rollers was added to the retraction mechanism in order to provide smoother operation. Also, separate blow-out lines for each vee were added in order to increase the reliability of sufficiently purging the cooling systems and provide the capability of draining a single vee should it develop a leak.

25216 **Testing of water-cooled cathodes on the Westinghouse high surface heat flux test facility.** Easoz, J.R.; Nahemow, M.D. (Westinghouse Electr Corp, Pittsburgh, PA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1670-1673(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

As Fusion programs progress from proof-of-principle experiments toward practical fusion power reactors, parallel programs are needed to develop components capable of withstanding the extreme surface heat and particle fluxes that will be encountered. The separation of the surface physics and heat flux effects appears to be a quick and economical route to successful component design. Realizing the need for such testing systems, Westinghouse in early 1979, initiated a program to build a pressurized water heat transfer loop that could be used in conjunction with an in-place high power electron beam system (previously used for e-beam welding research) to investigate high surface heat flux (1 to 5 kW/cm/sup 2/) dissipation concepts for use in potential fusion reactor components. This system was completed early in 1980. This report describes the system, the results of the first tests fone using the system, and upgrades to the current system initiated or proposed as a result of initial operation.

25217 **Mirror fusion test facility electrical systems, status and plans.** Lindquist, W.B. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1674(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The Mirror Fusion Test Facility (MFTR), a single cell, large scale mirror machine has been under construction at Lawrence Livermore National Laboratory (LLNL) sine October 1977 and was due to be completed October 1981. New machine has been designed to make maximum use of the systems constructed for MFTR with minimum modification. The electrical systems required for MFTF included; magnet electrical systems, Sustaining Neutral Beam Power Supply System, Startup Neutral Beam Power Supply System, Neutral Beam Sources, Plasma Streaming System, Supervisory Control and Diagnostics System, Local Control and Instrumentation Systems, Personnel Safety System and The High Voltage Test Stand (a neutral beam source test facility). This overview paper briefly discusses each of the electrical systems giving desired peformance characteristics, status and the overall plan to complete the electrical system for MFTF-B. The highlights from Technology Demonstration, a transition milestone between MFTF and MFTF-B, are also discusses.

25218 **Theoretical and experimental evaluation of the parameters in the new configuration of ETA-BETA II.** Fellin, L.; Guarnieri, M.; Machio, A.; Piovan, R. (EURATOM, Padua, Italy). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1688-1691(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Some modifications have been introduced in Eta-Beta II in order to achieve information about the expected behavior of the next generation of RFP machines. The inductor have been changed, thus increasing the rise time of the plasma current up to 0.5 ms; and active crowbar has been added, in order to extend the duration of the discharge. Moreover a detailed analysis of the inductor system has been carried out and a new equivalent network is proposed to simulate more accurately the machine behavior at the longer cooperating times.

25219 **Selection of vacuum seals for EBT-P.** Dillow, C.F.; Adlon, G.L.; Stubblefield, V.E. (McDonnell Douglas Astronaut Co, St. Louis, MO, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1713-1716(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Elmo Bumpy Torus Proof of Principle (EBT-P) is a magnetic fusion RandD facility being constructed by McDonnell Douglas Astronautics Company - St. Louis Division of Oak Ridge National Laboratory (ORNL). EBT-P is a truly unique fusion device requiring careful consideration in selecting both the primary vacuum seals on the toroidal vessel and the secondary vacuum seals in components such as vacuum pumps and and valves. The vacuum seal environment is described and the considerations in vacuum seal selection fully discussed. Methods for protecting vacuum seals in pumps and valves from the microwave environments are also presented.

25220 **Improved materials testing module for magnetic fusion.** Sawan, M.E.; Sze, D.K.; Kulcinski, G.L. (Univ of Wis, Madison, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1797-1800(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

The REGAT module, and improved materials testing module for magnetic fusion engineering test facilities, is presented. The damage gradients in the Module are reduced by exposing the sides of the module to direct fusion neutrons. A neutronics analysis is presented to assess the effectiveness of using the REGAT module in reducing damage gradients and increasing average damage levels.

25221 **Sensitivity of commercial ion gage tubes.** Tilford, C.R. (NBS, Washington, DC, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 1924-1927(1981). (CONF-811040—).

From 9. symposium on engineering problems of fusion research; Chicago, IL, USA (26 Oct 1981).

Fusion science and engineering requires an increasing number of accurate vacuum measurements. In order to determine what level of performance can be expected from different ion gages a gage characterization program has been initiated. This program determines the uniformity, accuracy, and linearity for different gage tubes, and for the more promising candidate futher characterizes the sensitivity for different gases and the effects of changing bias voltages and emission currents. Results to date show the best performance from conventional triode and tubulated Bayard/Alpert gages with tungsten filaments. Significantly poorer results are obtained from nude Bayard/Alpert gages and gages with thoriated iridium filaments.

25222 **Analysis and design of short, iron-free dipole magnets.** Harvey, A.R. (Lawrence Livermore Natl Lab, CA, USA). *Proceedings of the Symposium on Engineering Problems of Fusion Research;* 95-98([nd]).

Iron-free, dipole magnets are used extensively as steering magnets to correct for the bending, induced by extraneous magnetic fields, of particle beams that are being tranported in vacuum. Generally, the dipoles are long enough that the space occupied by the end conductors is small compared to the overall magnet length. In a recent application, however, this criteria dis not apply. This has motivated a reanalysis of the characteristics of a system of small aspect ratio (length/diameter) dipoles that are spaced at relatively large axial distances. Same observations and conclusions resulting from this analysis are reported. Some fabrication techniques which are being developed in a prototype magnet are also discussed.

99 GENERAL AND MISCELLANEOUS

25223 **(ANL/NESC—982) DOECTZDATA; California sixteen-zone weather data.** Helmich, C. (California Energy Resources Conservation and Development Commission, Sacramento (USA). Conservation Div.). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048982.

DOECTZDATA is a collection of hourly weather data for each of 365 days in a year for sixteen different California thermal zones representing Eureka, Santa Rosa, San Francisco, Santa Cruz, Santa Barbara, Los Angeles, San Diego, Santa Ana, Pasadena, San Bernardino, Red Bluff, Sacramento, Fresno, Daggett, Brawley, and Tahoe. The data presented are in the form of the WBAN Hourly Surface Observation data used by the National Climatic Center, Asheville, North Carolina. They include the sky condition, visibility, weather and/or obstruction to vision information, sea level pressure, dew point temperature, wind direction and speed, station pressure, dry and wet bulb temperature, relative humidity, and cloud and obscuring phenomena information.IBM360; OS/360.

9901 Management

REFER ALSO TO CITATION(S) 23080, 23722

25224 **(ANL/NESC—801) SKILLS INVENTORY; personnel information system.** Boschear, W. (Holmes and Narver, Inc., Las Vegas, NV (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048801.

Each employee's record is limited to 999 ten-character words, including comments. Each update is limited to 999 SKILLS cards.

The personnel SKILLS INVENTORY system consists of the three programs SKILLS, SKLFORM, and SEARCH. Each program is run independently of the others. SKILLS is designed to add, change, and delete personal data; build, search and/or print one master record for each employee entered into the system, whether active or terminated; delete an employee's entire master record; insert indicative comments when required; and perform a general check against an employee personnel card deck to ensure compatibility of data. Using skills search parameter cards, SEARCH can perform a complex variety and combination of searches, including a reverse search, and print various listings on a selective basis. Listing information includes educational degrees, professional licenses, professional society memberships, education, and employment status. SKLFORM converts employees' coded data into readable English language and prints their entire record.CDC6400,7600; FORTRAN IV; SCOPE; The number of words (octal) of small core memory (SCM) required to execute each of the three programs is: SKILLS-62,000, SKLFORM-55,000, and SEARCH-21,000.

25225 **(DOE/IG—104) Investigation of questions of possible document destruction by the Office of Special Counsel for Compliance.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 17 Mar 1980. 38p. TIC. Order Number DE83006126.

Report to the Secretary, Deputy Secretary.

This investigation was requested by two employees of the Office of Special Counsel and by the Director of the Office of Hearings and Appeals. The two issues discussed follow: Have documents in the files of the Office of Special Counsel been improperly destroyed by employees of the Office of Special Counsel; Did the Office of Special Counsel make an adequate response to internal rumors of possible improper document destruction. It was concluded that no documents were improperly destroyed by the Office of Special Counsel (OSC), but the OSC's response to internal rumors of such document destruction was determined to be inadequate. Recommendations are that the OSC provide its staff with formal guidance on how to maintain files that may be relevant to litigation and that OSC act more promptly to report allegations of possible wrongdoing to the Inspector General. Comments to the draft report are appended.

25226 **(DOE/IG—110) Administration of selected support-service contracts.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 18 Apr 1980. 81p. TIC. Order Number DE83006131.

Report to the Secretary, Deputy Secretary.

This report concerns weakness in how the Department of Energy (DOE) administered certain contracts with a consulting firm that provided support services to various offices of DOE. Based on the review of six contracts awarded by DOE Headquarters to two consulting firms, IG previously reported on the payment of high levels of compensation paid to management officials, other employees, and consultants. This report focuses on three contracts held by one of the two consulting firms discussed in the earlier report. All three contracts are of the cost-reimbursable type, and they were awarded without competition. The total value of the three contracts is about $1 million; and as of October 1979, about $720,000 had been paid out for these contracts. Excess profits; delayed completion date; inadequate procedures for contractors performance monitoring; and unauthorized work projects and personnel are discussed. (PSB)

25227 **(DOE/IG—115) Costly delays in the purchase of a scientific computer for the Solar Energy Research Institute.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 23 May 1980. 18p. TIC. Order Number DE83006498.

Report to the Secretary, Deputy Secretary.

The circumstances that caused the Department of Energy (DOE) to waste about $200,000 in connection with the purchase of a large scientific computer for the Solar Energy Research Institute (SERI), a DOE contractor located at Golden, Colorado, were examined. Wasted expenditures were attributed to untimely processing of the required congressional approval requests. (PSB)

25228 **(DOE/IG—120) Management of furniture at Department of Energy headquarters locations.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 27 Jun 1980. 74p. TIC. Order Number DE83006318.

Report to the Secretary, Deputy Secretary.

Where investigations showed no management system nor inventory data for office furniture acquisition, control and disposal, recommendations were made that FY 1980 furniture purchasing plans be reevaluated in light of current inventories and updated staffing plans. Tighter Controls for authorizations for new purchases plus establishment of reliable DOE procedures for managing office furniture were also recommended. Comments on the draft report are appended. (PSB)

25229 **(DOE/IG—121) Receipt and use of half-fare airline coupons at selected Department of Energy field locations.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 11 Aug 1980. 27p. TIC. Order Number DE83006319.

Report to the Secretary, Deputy Secretary.

The receipt and use of half-fare coupons obtained by employees of DOE field offices and DOE contractors while traveling at DOE expense were reviewed. These coupons, issued by United Airlines and American Airlines, provided for air travel at half-fare if used before December 15, 1979. Potential savings to DOE through coupon use ranging from $50,000 to $100,000 were lost, because of ineffective management action by both federal and contractor officials. Recommendations were that DOE ascertain the extent of the failure of contractors to recover coupons from their employees and recover from the contractors the amounts lost. IG submitted a draft of this final report for comment and received the comments of the Controller, the Director of Administration, and the Director of Procurement and Contracts Management. The comments included useful information; and where appropriate, the final report was changed to reflect the comments. In addition, the comments in their entirety are contained in the appendices.

25230 **(DOE/IG—133) Investigation of allegations of favored treatment of a relative of a senior official of the Department of Energy.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 23 Sep 1980. 63p. TIC. Order Number DE83006625.

Report to the Secretary, Deputy Secretary.

Where efforts were made by DOE officials to influence a contractor to employ a relative of another DOE official, investigators concluded this was a violation of the federal laws against nepotism (5 USC 3110 and 2302(b) (7)). In addition, those actions and arrangements for that family member's trip to Alaska appear to have violated DOE regulations for employees' conduct, which prohibit preferential treatment of members of the public by DOE officials. Recommendations were given for: appropriate disciplinary actions; reminding DOE officials of their responsibility to refrain from impropriety with employment referrals to DOE contractors; revision of DOE regulations on invitational travel to pay for trips by private citizens to perform work usually done by DOE employees; and encouraging employees to report possible abuse and wrongdoing in administering DOE programs. Comments and compliance plans are appended. (PSB)

25231 **(DOE/MA—0006/8) Quarterly status of Department of Energy projects.** (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Project and Facilities Management). 31 Dec 1982. 345p. NTIS, PC A15/MF A01. Order Number DE83009279.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This Quarterly Status of Department of Energy Projects is prepared by the Office of Project and Facilities Management. The report is designed to provide Department of Energy (DOE) management officials with a summary of the important baseline data that exists in the DOE project data base. This data base is maintained chiefly from periodic field management reports required by DOE. Since most of the current estimates in this report are from field project managers, they do not necessarily have full Headquarters approval. The current budget data sheet estimates that appear in the report are considered appropriate for reporting external to the Department and reflect the President's FY 1984 Budget to Congress.

25232 **(UCRL—88904) Implementing affirmative action in conservative times.** Smith, M.R. (Lawrence Livermore National Lab., CA (USA)). 15 Mar 1983. Contract W-7405-ENG-48. 13p. (CONF-830322—1). NTIS, PC A02/MF A01. Order Number DE83009242.

From 4. national conference on equal employment opportunity and affirmative action; Atlanta, GA, USA (2 Mar 1983).

An affirmative action implementation is presented based on these steps: strategy, tactics, training, excellence, peripheralness, politics, and sensitivity. (GHT)

9902 Mathematics And Computers

25233 **(ANL/NESC—753) OCOPTR;DRVOCR; unconstrained optimization.** Nazareth, J.L. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048753.

The functions to which the routine is applied are assumed to be differentiable. The routine also requires (n**2/2) + 0(n) storage locations where n is the problem dimension. Reference reports, TM-303 and TM-306.

OCOPTR and DRVOCR are computer programs designed to find minima of non-linear differentiable functions f: R**n—>R with n dimensional domains. OCOPTR requires that the user only provide function values (i.e. it is a derivative-free routine). DRVOCR requires the user to supply both function and gradient information.IBM360,370; FORTRAN IV; OS/MVT; 50K of memory is required.

25234 **(ANL/NESC—764) SOERP; second-order error propagation code.** Cox, N.D.; Miller, C.F. (EG and G Idaho, Inc., Idaho Falls (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048764.

The maximum number of component variables allowed is 30. The IBM version will only process one set of input data per run.

SOERP computes second-order error propagation equations for the first four moments of a function of independently distributed random variables. SOERP was written for a rigorous second-order error propagation of any function which may be expanded in a multivariable Taylor series, the input variables being independently distributed. The required input consists of numbers directly related to the partial derivatives of the function, evaluated at the nominal values of the input variables and the central moments of the input variables from the second through the eighth.IBM360,370;CDC7600; FORTRAN IV; OS/360,370 (IBM360,370) and SCOPE (CDC7600); A card reader, tape unit, line printer, and 80K bytes of storage are required for the IBM version; 14,000 (octal) words of SCM are required for the CDC version.

25235 **(ANL/NESC—765) ZONE; 2-dimensional finite element mesh generator.** Burger, M.J. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048765.

The following are limited only by a DIMENSION statement. The code currently has a maxima of 100 coordinate points defining a meridian or ray, 40 meridians, 40 layers. There are no limits on the number of zones or nodes for any problems.

The ZONE program is a finite element mesh generator which produces the nodes and element description of any two-dimensional geometry. The geometry is divided into a mesh of quadrilateral and triangular zones defined by node points taken in a counter-clockwise sequence. The zones are arranged sequentially in an ordered march through the geometry. The order can be chosen so that the minimum bandwidth is obtained. The mesh that is generated can be used as input to any two-dimensional as well as any axisymmetrical structure program.CDC7600; FORTRAN; SCOPE; 8 output and scratch files are used.

25236 **(ANL/NESC—766) FRANTIC-NRC; time-dependent system unavailability.** Vesely, W.E.; Goldberg, F.F. (Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048766.

Reference report, NUREG-0193.

FRANTIC-NRC was developed to investigate periodic testing schemes and operational and design modifications as they affect system unavailabilities and accident probabilities. The program calculates both the instantaneous and the average unavailability for any general system model and gives a breakdown of the unavailability contributions from failures, testing, and repair. Non-repairable components, monitored components, and periodically-tested components are considered. Accident sequences, such as those constructed from event trees, can also be evaluated for their instantaneous and average probability behavior. The name FRANTIC is an acronym for Formal Reliability Analysis including Normal Testing, Inspection and Checking. The code represents one extension of the probabilistic methodology described in WASH-1400. Testing characteristics which can be specified as input data include the test interval, test duration time, repair time or allowed downtime, the test override capability, test efficiency, and associated human-caused failure probabilities. The output consists of tables and plots of the system unavailability along with a breakdown of the unavailability contributions. Sensitivity studies can be performed.IBM370; FORTRAN IV; OS/370; 140K bytes of memory are required for execution.

25237 **(ANL/NESC—769) PCTEST; principal component test for outliers.** Kane, V.E. (Oak Ridge Gaseous Diffusion Plant, TN (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048769.

Programming is done in single-precision; conversion to double-precision would not be difficult. Dynamic dimensioning is used to accommodate a large variety of data sets. Reference report, K/UR-7.

PCTEST performs principal component analysis on multivariate data with emphasis on methods which can be used to detect outlier data.IBM360,370; FORTRAN IV; OS/360,370; 260K bytes plus array storage (total of approximately 265K bytes for 100 samples, 10 variables).

25238 **(ANL/NESC—773) PRPLOT; line printer plot subroutine package.** Walker, R.S.; Rumsey, J. (Texas Univ., Arlington (USA). Public Transportation Center). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048773.

The allowable complexity of the plot is controlled by the size of a work array passed from the calling program. Symbols are generated using only vectors of 0, 90, 180, or 270 degrees, and axes are generated only at 0 or 90 degrees. Reference report, TX-11-0001.

PRPLOT is a line printer graphics subroutine package that maintains compatibility with the CalComp incremental pen plotter software. Calls to PLOT, PLOTS, FACTOR, WHERE, SYMBOL, NUMBER, SCALE, LINE, and AXIS are supported and a dummy NEWPEN subroutine is included. When a large plot size is selected, the plot is generated in page-wide strips to be separated and assembled as the complete plot.IBM370,360; FORTRAN IV; OS/360 (IBM360), OS/370 (IBM370); The PRPLOT subroutines require approximately 50K bytes of storage.

25239 **(ANL/NESC—777) PDEONE; solutions of partial differential equations.** Madsen, N.K. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048777.

Currently only one PDE is allowed to be defined on a given interval (a,b). This may be increased to n PDEs by increasing the dimensions of the arrays in PDEONE.

PDEONE was developed as an interface to allow the software developed in the field of ordinary differential equations (ODEs) to be applied directly to the solution of partial differential equation problems. The original intent was to use PDEONE for solving coupled systems of nonlinear parabolic PDEs and this is reflected in the equations and conditions. However, the solution of other problems such as hyperbolic and elliptic PDEs may also be attempted. The equations are sufficiently general to include PDEs for which solutions may neither exist nor be unique. It is the user's responsibility to define a meaningful problem.CDC7600,6600; FORTRAN IV; SCOPE; 27,000 (octal) words of small core memory are needed to execute the sample problems.

25240 **(ANL/NESC—779) IMPORTANCE; FTA basic event & cut set ranking.** Lambert, H.W. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048779.

IMPORTANCE computes various measures of probabilistic importance of basic events and minimal cut sets to a fault tree or reliability network diagram. The minimal cut sets, the failure rates and the fault duration times (i.e., the repair times) of all basic events contained in the minimal cut sets are supplied as input data. The failure and repair distributions are assumed to be exponential. IMPORTANCE, a quantitative evaluation code, then determines the probability of the top event and computes the importance of minimal cut sets and basic events by a numerical ranking. Two measures are computed. The first describes system behavior at one point in time; the second describes sequences of failures that cause the system to fail in time. All measures are computed assuming statistical independence of basic events. In addition, system unavailability and expected number of system failures are computed by the code.IBM370; FORTRAN IV; OS/370; Execution of the sample problem required 140K bytes of storage.

25241 **(ANL/NESC—781) SPEKEN; Pearson, Spearman & Kendall correlation.** Larson, N.M. (Union Carbide Corp., Oak Ridge, TN (USA). Nuclear Div.). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048781.

Reference report, K/UR-8.

SPEKEN computes Pearson, Spearman, and Kendall correlation coefficients and associated significance levels for multivariate data. Special features of the program include exclusion of pairs of data values where one value is missing, and adjustment for tied rankings. The hypothesis of independence between each pair of variables can be tested using the obtained significance level for each correlation.IBM360,370; FORTRAN IV; OS/360,370; Standard system input and printer and punch output units are required.

25242 **(ANL/NESC—800) LINPACK; simultaneous linear algebraic equations.** Dongarra, J.J. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048800.

There are no subroutines for general sparse matrices or for iterative methods for very large problems.; Reference reports, SAND-77-0898 and ANL-80-105, and NESC Note.

LINPACK is a collection of FORTRAN subroutines which analyze and solve various classes of systems of simultaneous linear algebraic equations. The collection deals with general, banded, symmetric indefinite, symmetric positive definite, triangular, and tridiagonal square matrices, as well as with least squares problems and the QR and singular value decompositions of rectangular matrices. A subroutine-naming convention is employed in which each subroutine name consists of five letters which represent a coded specification (TXXYY) of the computation done by that subroutine. The LINPACK package also includes a set of routines to perform basic vector operations called the Basic Linear Algebra Subprograms (BLAS).IBM360,370 (designed to be machine-independent); FORTRAN; OS/360,370 on the IBM360,370; The entire coefficient matrix will usually be stored in the computer memory, although there are provisions for band matrices and for row-by-row processing of large rectangular matrices. 240K bytes of storage are required for execution of a typical sample problem on the IBM360,370 system.

25243 (ANL/NESC—803) BASIC2 INTERPRETER; minimal basic language. McGoldrick, P.R.; Allison, T.G. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048803.

Reference report, UCID-17752.

The BASIC2 INTERPRETER was developed to provide a high-level easy-to-use language for performing both control and computational functions in the MCS-80. The package is supplied as two alternative implementations, hardware and software. The "software" implementation provides the following capabilities: entry and editing of BASIC programs, device-independent I/O, special functions to allow access from BASIC to any I/O port, formatted printing, special INPUT/OUTPUT-and-proceed statements to allow I/O without interrupting BASIC program execution, full arithmetic expressions, limited string manipulation (10 or fewer characters), shorthand forms for common BASIC keywords, immediate mode BASIC statement execution, and capability of running a BASIC program that is stored in PROM. The allowed arithmetic operations are addition, subtraction, multiplication, division, and raising a number to a positive integral power. In the second, or "hardware", implementation of BASIC2 requiring an Am9511 Arithmetic Processing Unit (APU) interfaced to the 8080 microprocessor, arithmetic operations are performed by the APU. The following additional built-in functions are available in this implementation: square root, sine, cosine, tangent, arcsine, arccosine, arctangent, exponential, logarithm base e, and logarithm base 10. MCS-80,8080-based microcomputers; 8080 Assembly language; Approximately 8K bytes of RAM to store the assembled interpreter, additional user program space, and necessary peripheral devices. The hardware implementation requires an Am9511 Arithmetic Processing Unit and an interface board (reference 2).

25244 (ANL/NESC—806) 2DEPEP; elliptic, parabolic & eigenvalue solutions. Sewell, E.G. (Purdue Univ., Lafayette, IN (USA). Dept. of Computer Science). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048806.

At most two simultaneous partial differential equations can be solved. The input data set is limited to 200 cards. This can be increased by changing the value of the variable MXCARD and increasing the dimensions of the arrays L, INDX, and LNAM in the preprocessor.

2DEPEP solves the partial differential equation system: C1(X,Y,U,V,T)*DU/DT=D(OXX)/DX+D(OXY)/DY+F1(X,Y,U,V,T) C2(X,Y,U,V,T)*DV/DT=D(OYX)/DX+D(OYY)/DY+F2(X,Y,U,V,T) in a general two-dimensional region, R, with U=FB1(S) V=FB2(S) for S on BR1, and OXX*NX+OXY*NY=GB1(S,U,V,T) OYX*NX+OYY*NY=GB2(S,U,V,T) for S on BR2, where BR1 and BR2 are distinct parts of the boundary. (NX,NY)= unit outward normal. U=U0(X,Y) V=V0(X,Y) for T=T0, and OXX=OXX(X,Y,DU/DX,DU/DY,DV/DX,DV/DY,T) OXY=OXY(X,Y,DU/DX,DU/DY,DV/DX,DV/DY,T) OYX=OYX(X,Y,DU/DX,DU/DY,DV/DX,DV/DY,T) OYY=OYY(X,Y,DU/DX,DU/DY,DV/DX,DV/DY,T). The Jacobian matrices of derivatives of OXX,OXY,OYX,OYY with respect to DU/DX,DU/DY,DV/DX,DV/DY and of F1,F2 with respect to U,V and of GB1,GB2 with respect to U,V must be symmetric. The related elliptic and eigenvalue problems are also solved by 2DEPEP and single equations can be handled efficiently. Examples of applications of the program are elasticity, one- or two-component diffusion, heat conduction, minimal surface, potential problems and the time-independent and time-dependent Schrodinger equations.CDC6500,7600; FORTRAN IV; SCOPE; 120K (octal) words of memory are required together with an auxiliary storage device, such as disk or tape, for temporary use in large problems (unit 2), and another storage device for temporary use to store the preprocessor output (unit 4).

25245 (ANL/NESC—812) DWG100RQ;DWG101RQ; convert to or from SI units. Scott, J.T.; Branscomb, D. (Monsanto Research Corp., Miamisburg, OH (USA). Mound). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048812.

DWG100RQ,DWG101RQ consists of five programs used to convert SI metric units of measurement from engineering drawings to U.S. customary dimensions based on the rounding rules specified in the Mound Laboratory Design/Drafting Standard DWG No. SPA760290 (DWG100RQ), or to convert U.S. customary units of measurement from engineering drawings to SI metric dimensions based on the rounding rules specified in the Mound Laboratory Design/Drafting Standard DWG No. SPA800269 (DWG101RQ). The five programs are MTRC0001, MTRC0002, MTRC0003, MTRC0004, and MTRC1001. MTRC0002 is a preprocessor used to format input data to align decimal points, generating 83-character data records that can be easily sorted. MTRC0003 and MTRC0004 sort numerical data based on the sign of the number and the sign of the exponent. MTRC0003 writes the numerical data to one of four files based on whether the number is positive or negative and whether the exponent is positive or negative. These files are then sorted by the IBM System SORT utility and merged by MTRC0004 for input either to MTRC0001, if metric units are to be converted to U.S. customary units, or to MTRC1001, if U.S. customary units are to be converted to metric units.IBM360,370,303x; FORTRAN IV (85%) and COBOL Version 4 (15%); OS/360; 50K bytes of memory are required to execute MTRC0002, MTRC0003, and MTRC0004. MTRC0001 and MTRC1001 require 90K bytes and the IBM SORT utility uses 70K bytes.

25246 (ANL/NESC—816) DPOLE; helmholtz equation on general 3-dimensional region. Widlund, O. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048816.

Reference report, COO-3077-155.

DPOLE solves the Dirichlet problem for the Helmholtz equation over a general bounded three-dimensional region imbedded in a unit cube -W(XX)-W(YY)-W(ZZ)+CC*W=G1 in the region W=F on the boundary where F and G1 are given functions of X, Y, and Z, and CC is a real constant. The boundary is arbitrary.CDC6600,7600; FORTRAN IV, FTN 4.6+460 compiler; SCOPE 3.4.4 (CDC6600), SCOPE 2.1.3 (CDC7600); 52K (octal) words of memory are required.

25247 (ANL/NESC—819) ANOVA; three factor analysis of variance. Carder, J.H.; Grogger, G.M. (Bendix Corp., Kansas City, MO (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048819.

Due to current program dimensions, maxima of 40 levels of factor A, 20 levels of factor B, 20 levels of factor C, and 100 repeats are allowed. Reference report, BKC Document 25.

ANOVA provides the analysis of variance techniques necessary to analyze experimental data. Four models can be used to analyze one, two, or three factor experiments, with the factors being either fixed or random. These models are: fully crossed, fully nested, factors A and C crossed with B nested in A, and factors A and B crossed with C nested in AB.CDC6600; FORTRAN IV; SCOPE; 55,000 (octal) words of memory.

25248 (ANL/NESC—820) SLATEC1.0; mathematical subroutine library. or A. B. White, W.R.B. (Los Alamos National Lab., NM (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048820.

Reference reports SAND-82-0202 and LA-UR-80-3631.

SLATEC is a large collection of FORTRAN mathematical subprograms brought together in a joint effort by the Air Force Weapons Laboratory, Lawrence Livermore National Laboratory, Los Alamos National Laboratory, Magnetic Fusion Energy Com-

puting Center, National Bureau of Standards, Sandia National Laboratories (Albuquerque and Livermore), and the Union Carbide Corporation Nuclear Division at Oak Ridge National Laboratory. SLATEC is characterized by portability, good numerical technology, good documentation, robustness, and quality assurance. The library can be divided into the following subsections following the lines of the SHARE classification system: Special Functions, Polynomial Zeros, Quadrature, Interpolation, Approximation - Interpolation and Data Fitting, Linear Equations, Ordinary Differential Equations, Eigenanalysis, Vector Operations, Linear Least Squares, Fast Fourier Transforms, Nonlinear Equations and Linear Least Squares, and Fast Poisson Solvers.CRAY1;CDC CYBER175 (designed to be machine-independent); FORTRAN; NOS 1.4 (CDC CYBER175) (designed to be operating system independent).

25249 **(ANL/NESC—822) LR; LR(1) grammar analyzer & parser generator.** Shannon, A.W. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048822.

The vocabulary is limited to 500 items. The number of productions is limited to 500. The size of the parsing automaton is also limited based on the complexity and number of states. A relatively large number of simple states or a relatively small number of complex states is possible. Reference report, UCRL-82926.

LR is an LR(1) parsing system written entirely in ANSI standard FORTRAN-66. The system includes a grammar analyzer program which reads a context-free grammar as input and produces LR(1) parsing tables as output, and a skeleton parser that, when compiled with the tables as data, will parse the language defined by the grammar. Table generation also produces a complete grammar listing with error messages, diagnostic data, and a trace of the parser generation process.IBM370; FORTRAN (ANSI X3.9-1966); OS/370; One input unit (LUN20) and one output unit (LUN21) are required. Disk is suggested for output. The program uses approximately 40,000 decimal words of working storage at LLL. LR requires 278K bytes of storage to execute the sample problems on an IBM370/195.

25250 **(ANL/NESC—825) MESA; maximum entropy time series analysis.** Fowler, T.B.; Tobias, M.L.; Fox, J.N.; Lawler, B.E.; Koppel, J.U.; Triplett, J.R.; Lynn, L.L.; Waldman, L.A.; Goldberg, I.; Greebler, P.; Kelley, M.D.; Davis, R.A.; Keck, C.E.; Redfield, J.A.; Murphy; Winkle, W.V. (Oak Ridge National Lab., TN (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048825.

Maxima of, 5 spectra 5 transformations, 600 data points, 599 frequencies. Reference report, ORNL-5332.

The MESA program determines periodic components from input data which represent a time series. Transformations may be performed on the raw data before doing the spectral analysis. Routines are included to calculate both the Fourier spectrum and maximum entropy spectrum, the Yule-Walker estimates of the autocovariance function, the periodogram ordinates, the cumulative periodogram, the autocorrelation function resulting from the maximum entropy computations, and the final prediction error, if desired.IBM360,370; FORTRAN IV; OS/360 (IBM360), OS/370 (IBM370); 250 to 320K bytes of main memory are required with one input unit (logical unit 5) and one output unit (logical unit 6).

25251 **(ANL/NESC—827) FASTCAR; solution of Cauchy-Riemann equations.** Ghil, M.; Balgovind, R. (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048827.

The number of mesh points is dependent on the type of boundary conditions. For U(x,y) and V(x,y) periodic in x, the number of mesh points in x must be a power of 2. For the other two cases (see item 7), the number of mesh points in y for V(x,y) must be a power of 2 plus 1.

FASTCAR (a fast Cauchy-Riemann solver) solves a second-order accurate, discrete form of the inhomogeneous Cauchy-Riemann equations on a rectangle: Ux + Vy = d(x,y), Uy - Vx = e(x,y). Any one of the following combinations of boundary conditions is possible: (a) U(x,y) and V(x,y) are periodic in x. V(x,y) is assigned on the bottom and top of the rectangle, and the sum of U(x,y) is assigned over x for some fixed y. (b) V(x,y) is assigned on the bottom, top, and right sides of the rectangle, and U(x,y) is assigned on the left side. (c) V(x,y) is assigned on the bottom and top, and U(x,y) is assigned on the left and right of the rectangle. Numerical results indicate second-order accuracy even in cases where solutions do not have the smoothness required for the appropriate theoretical estimates.CDC6600,7600;IBM360,370; FORTRAN IV; SCOPE (CDC6600,7600), OS/370 (IBM370); 102,000 (octal) words of memory (CDC6600), 260K bytes of memory (IBM370).

25252 **(ANL/NESC—829) OPTIMIZERS; nonlinear optimization subroutines.** Hillstrom, K.E. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048829.

No subroutines for derivative-free unconstrained optimization or for sparse nonlinear systems of equations are included.

OPTIMIZERS is a collection of FORTRAN subroutines addressed to the unconstrained nonlinear optimization problem. The specific problem areas covered by the routines are - (a) unconstrained optimization, (b) nonlinear least-squares optimization, and the (c) solution of nonlinear systems of equations.IBM360,370; FORTRAN IV; OS/370; 250K bytes of storage.

25253 **(ANL/NESC—834) MOL1D; partial differential equations solution.** Hyman, J.M. (Los Alamos National Lab., NM (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048834.

Unsymmetric differences are restricted to hyperbolic equations in characteristic form. The Fourier method may be used only in periodic problems. Reference report, LA-7595-M.

MOL1D is a FORTRAN subroutine package for the method-of-lines solution for systems of initial-boundary-value partial differential equations in one space dimension. This package allows a programmer with limited experience in numerical analysis to accurately solve linear and nonlinear hyperbolic equations with or without discontinuities, linear and nonlinear parabolic equations, including those arising in reaction-diffusion equations, and elliptic boundary value problems when posed as the stable time-independent solution of a parabolic equation. Systems are handled as easily as single equations, and a wide variety of boundary conditions can be accommodated.CDC6600,7600;Amdahl470;IBM3033; FORTRAN IV; SCOPE 2.1.5 (CDC7600) and OS/MVS (IBM3033); 58K (octal) words of memory are required on the CDC7600, 105K (octal) words on the CDC6600, and 270K bytes on the IBM3033.

25254 **(ANL/NESC—838) CONF; conference attendee & speaker data file.** Celoni, C.; Joiner, E. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048838.

CONF is a simple tape or disk file system designed to assist conference planners in maintaining information pertaining to attendees, speakers, and other record-keeping aspects for any conference.CDC6600; COBOL 4.5.; SCOPE 3.4.4; 16,000 (octal) words of memory are required by the CONF-010 and CONF-030 programs, and 22,000 (octal) words of memory are used by CONF-020.

25255 **(ANL/NESC—840) DENDRO; hierarchical cluster analysis of data.** Larson, N.M.; Begovich, C.L. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048840.

A pairwise distance matrix is stored. This matrix requires N(N-1)/2 (where N is the number of objects) storage locations. Reference report, ORNL/CSD/TM-120.

DENDRO performs hierarchical cluster analysis of experimental data with options for data normalization, metrics, and clustering criteria. A dendrogram, or tree plot, can be generated on a line printer or plotter illustrating which clusters are combined at what distance.IBM360,370; FORTRAN IV (98%) and Assembly language (2%); OS/360,370; Storage required depends on problem size; small problems with 100 to 200 objects can be executed in 260K bytes of memory.

25256 **(ANL/NESC—843) RANDOM NUMBERS; obtained from U235 alpha decay.** Fowler, T.B.; Tobias, M.L.; Fox, J.N.; Lawler, B.E.; Koppel, J.U.; Triplett, J.R.; Lynn, L.L.; Waldman, L.A.; Goldberg, I.; Greebler, P.; Kelley, M.D.; Davis, R.A.; Keck, C.E.; Redfield, J.A.; Murphy; Tyler, S.A. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048843.

The RANDOM NUMBERS tape contains 2,669,568 31-bit numbers.

RANDOM NUMBERS is a data collection of almost 2.7 million 31-bit random numbers generated by using a high resolution gas ionization detector chamber in conjunction with a 4096-channel multichannel analyzer to record the radioactive decay of alpha particles from a U-235 source. The signals from the decaying alpha particles were fed to the 4096-channel analyzer, and for each channel the frequency of signals registered in a 20,000-microsecond interval was recorded. The parity bits of these frequency counts, 0 for an even count and 1 for an odd count, were then assembled in sequence to form 31-bit random numbers and transcribed onto magnetic tape. This cycle was repeated to obtain the random numbers.IBM370,303x; Binary (random numbers) and FORTRAN IV (AFRAND and Driver); OS/370; The auxiliary program AFRAND requires 55K bytes of memory for execution with the test case provided. Random numbers from the tape are read from tape unit 13.

25257 **(ANL/NESC—848) SYSREL; reliability analysis of series systems.** Biver, C.J. (General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048848.

Maxima of 10 stages, 5 components per stage SYSREL is only applicable to series systems. However, the method outlined may be extended to series-parallel systems, although not with little effort. Reference report, GEPP-TIS-411.

The SYSREL program uses a Monte Carlo simulation procedure to derive estimates of the reliability of systems consisting of a series of stages, each of which may be composed of components of equal or unequal reliability values operating in active, partial, or standby redundancy modes. In all cases a constant failure rate (exponential distribution of component life) is assumed. However, the addition of other descriptions of component life, such as gamma, log-normal, etc. would be relatively simple.Honeywell Series 60 Level 66,6000; BASIC; GCOS.

25258 **(ANL/NESC—967) SOFTWARE TOOLS; program development interface.** Scherrer, D.K. (Lawrence Berkeley Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048967.

One of the problems encountered by computer users is the lack of common utility routines for different computer systems. The software which was initially presented in Kernighan and Plauger's SOFTWARE TOOLS represented a first step toward a solution to this problem. A common editor, text formatter, sort, and other program development tools were presented through two mechanisms: (a) all source was written in RATFOR, a FORTRAN preprocessor language directly translatable into FORTRAN, and (b) system-dependent routines were pushed down either into macro replacements or primitive function calls, to be implemented by the individual charged with bringing up the utilities in the local computing environment. These mechanisms, together with adoption of certain conventions pertaining to data types, permit many sites running different operating systems to implement these tools. If the shell, or command line interpreter, is implemented, this software can essentially define a portable "virtual operating system" providing inter-system uniformity at the three levels of user interface--virtual machine (the primitives), utilities, and command language. The SOFTWARE TOOLS package consists of a set of program development utilities and a program library modelled after the Bell Laboratories' proprietary UNIX operating system.Base version (This version is not tailored to any one machine but serves as a portable base for the user who can add "primitives" or modify the base source to tailor SOFTWARE TOOLS to the local computing environment.); FORTRAN IV and RATFOR.

25259 **(ANL/NESC—968) SLIC; interactive graphics 3-d mesh generation.** Gerhard, M.A. (Lawrence Livermore National Lab., CA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048968.

Compressed data storage allows up to 32,762 points on the logical cube and a similar number on the actual mesh. Each logical point requires 1/4 word of small core memory (SCM), and each actual point retained requires four words of large core memory (LCM). SCM and LCM are dynamically allocated by the SLIC program.

SLIC is an interactive graphics mesh generator developed for use with finite-element and finite-difference method application programs. The interactive graphics display coupled with mesh modification commands provides the user the ability to 'manipulate' the mesh and immediately view the result of this action. This capability facilitates the construction of complex models.CDC7600; FORTRAN IV (99%) and COMPASS (1%); SLP (SLOPE); 102,000 (octal) words of small core memory and 400 (octal) words of large core memory are required to execute the sample problem..

25260 **(ANL/NESC—972) NJE; VAX-VMS IBM NJE network protocol emulator.** Engert, D.E.; Raffenetti, C. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048972.

Restrictions are related to functionality required of an end-node. The NJE protocol supports only those 'print' files with record sizes less than or equal to 133 bytes and 'punch' files with record sizes of 80 bytes.

NJE is communications software developed to enable a VAX VMS system to participate as an end-node in a standard IBM network by emulating the Network Job Entry (NJE) protocol. NJE supports job networking for the operating systems used on most large IBM-compatible computers (e.g., VM/370, MVS with JES2 or JES3, SVS, MVT with ASP or HASP). Files received by the VAX can be printed or saved in user-selected disk files. Files sent to the network can be routed to any network node for printing, punching, or job submission, or to a VM/370 user's virtual reader. Files sent from the VAX are queued and transmitted asynchronously. No changes are required to the IBM software.DEC VAX11/780; VAX-11 FORTRAN 77 (99%) and MACRO-11 (1%); VMS 2.5; VAX11/780 with DUP-11 UNIBUS interface and 9600 baud synchronous modem..

25261 **(ANL/NESC—975) INGEN; finite element program mesh generator.** Cook, W.A. (Los Alamos National Lab., NM (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048975.

The origin cannot be used as the coordinates of a nodal point since the zero coordinates are a test used for nonexistent nodal points. To ensure a minimum bandwidth, label the index with the least number of nodal points I and the index with the most nodal points K.

INGEN is a general-purpose mesh generator for use in conjunction with two- and three-dimensional finite element programs. The basic components of INGEN are surface and three-dimensional

region generators that use linear-blending interpolation formulae. These generators are based on an i, j, k index scheme, which is used to number nodal points, construct elements, and develop displacement and traction boundary conditions.CDC7600; FORTRAN IV; SCOPE 2.1.5 (CDC7600); INGEN requires approximately 114,000 (octal) words of small core memory and 274K (octal) words of large core memory for CDC7600 execution..

25262 **(ANL/NESC—986) ELLIPTIC; elliptic integrals by duplication.** Carlson, B.C. (Ames Lab., IA (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048986.

Source deck (539 cards) Sample problems (FORTRAN 327 cards, data 180 cards) Sample problems output (12 pages) NESC Note.

ELLIPTIC is a set of four subroutines for numerically evaluating logarithms, arctangents, and elliptic integrals of all three kinds, including complete integrals. Two of the subroutines evaluate the incomplete elliptic integrals of the first and third kinds - RF(x,y,z) =1/2 of the integral with respect to t from 0 to infinity of ((t+x)(t+y)(t+z))**(-1/2), and RJ(x,y,z,p)=3/2 of the integral with respect to t from 0 to infinity of ((t+x)(t+y)(t+z))**(-1/2)/(t+p). The integrals are complete if x=0. The other two subroutines evaluate the special cases RC(x,y)=RF(x,y,y) and RD(x,y,z)=RJ(x,y,z,z). The function RD is an incomplete elliptic integral of the second kind, and RC embraces the logarithm, inverse circular functions, and inverse hyperbolic functions. These functions and others, such as Legendre's elliptic integrals and Heuman's lambda function can be expressed in terms of RC, RF, RD, and RJ (reference 1).NAS AS/6;IBM370 (designed to be machine-independent); FORTRAN IV; OS/MVT (IBM370); NESC used less than 50K bytes on an IBM370/195 for execution of the sample problems..

25263 **(ANL/NESC—988) XERROR; Fortran library error-handling package.** Jones, R.E. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048988.

The internal message table is normally set to a maximum length of 10 messages.

XERROR is a collection of portable FORTRAN routines which serves as a central facility for processing error messages associated with errors occurring in libraries of FORTRAN routines. Two releases of XERROR are provided, one written in American National Standard X3.9-1966 FORTRAN ar.d the other in American National Standard X3.9-1978 FORTRAN.CDC7600,6600,CYBER175 (designed to be machine-independent); FORTRAN 66 and FORTRAN 77; NOS 1.4 (CDC CYBER175); 26,000 (octal) words of memory are required to execute XERROR with the test programs provided..

25264 **(ANL/NESC—989) LCLSQ1; linear least squares with constraints.** Fowler, T.B.; Tobias, M.L.; Fox, J.N.; Lawler, B.E.; Koppel, J.U.; Triplett, J.R.; Lynn, L.L.; Waldman, L.A.; Goldberg, I.; Greebler, P.; Kelley, M.D.; Davis, R.A.; Keck, C.E.; Redfield, J.A.; Murphy,; Minkoff, M. (Argonne National Lab., IL (USA)). [nd]. vp. Available from NTIS and National Energy Software Center, Argonne National Laboratory, 9700 South Cass Avenue, Argonne Il 60539. Order Number DE83048989.

LCLSQ1 solves linear least-squares fitting problems with or without linear equality or inequality constraints. Specifically, given a matrix C with p rows and n columns (p .GE. n) and a p-dimensional vector d, LCLSQ1 finds the n-dimensional vector x which minimizes the sum of squares in the residual vector Cx-d. Further, this vector x can be required to satisfy m linear equality and/or inequality constraints, e.g., a(i)x .GE. b(i), where a(i) is an n-dimensional row vector of coefficients and b(i) is a scalar constant. The role of constraints is particularly useful in controlling the nature of x for linear data-fitting applications.IBM303x,360,370; FORTRAN; OS/MVT; LCLSQ1 compiles and executes the sample problem in less than 180K bytes. The GO step requires 168K..

25265 **(BDX—613-2829) Visual-response indicator for bar-code-reader input. Final report.** Harte, J.R. (Bendix Corp., Kansas City, MO (USA)). Mar 1983. Contract AC04-76DP00613. 15p. NTIS, PC A02/MF A01. Order Number DE83009149.

A prototype visual-response indicator was designed, built, and tested. The indicator is designed to work in conjunction with a bar-code reader for inputting data to the Computer-Aided Cable Tracking and Updating System. The indicator was tested using simulated production operations and was found to meet all design-specification requirements.

25266 **(CONF-810546—5) IBM NJE protocol emulator for VAX/VMS.** Engert, D.E. (Argonne National Lab., IL (USA)). 1981. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01. Order Number DE83008516.

From 1981 spring DECUS U.S. symposium; Miami Beach, FL, USA (18 May 1981).

Portions are illegible in microfiche products.

Communications software has been written at Argonne National Laboratory to enable a VAX/VMS system to participate as an end-node in a standard IBM network by emulating the Network Job Entry (NJE) protocol. NJE is actually a collection of programs that support job networking for the operating systems used on most large IBM-compatible computers (e.g., VM/370, MVS with JES2 or JES3, SVS, MVT with ASP or HASP). Files received by the VAX can be printed or saved in user-selected disk files. Files sent to the network can be routed to any node in the network for printing, punching, or job submission, as well as to a VM/370 user's virtual reader. Files sent from the VAX are queued and transmitted asynchronously to allow users to perform other work while files are awaiting transmission. No changes are required to the IBM software.

25267 **(CONF-820322—4) Issues in defining standards for documentation.** Gabriel, J.R. (Argonne National Lab., IL (USA)). 1982. Contract W-31-109-ENG-38. 5p. NTIS, PC A02/MF A01. Order Number DE83007620.

From Federal information processing standards software documentation workshop; Washington, DC, USA (3 Mar 1982).

Documentation should meet the needs of several kinds of users. It should be in modules that can be strung together, so that the same information is not written in several places. The master copy should be machine readable so that a computer can help with the inevitable updates. There may be several modules dealing with the same subject at different levels of detail. In such cases it should be easy to travel vertically through a set of more detailed modules, as well as horizontally from one module to another about something different at the same technical level. All of these travel processes should be easy to perform in documentation on paper, and should be facilitated on a computer by an intelligent process that remembers frequently used paths for any given user. The computer-based travel process should have a richer set of commands than the one on paper, which is probably restricted to UP, DOWN, and SIDEWAYS, speaking in metaphorical terms.

25268 **(CONF-8110259—1) Note on cubature over a triangle of a function having specified singularities.** Lyness, J.N.; Gatteschi, L. (Argonne National Lab., IL (USA); Turin Univ. (Italy). Ist. di Calcoli Numerici). 1981. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01. Order Number DE83008674.

From Numerical integration meeting; Oberwolfach, F.R. Germany (4 Oct 1981).

The conical product rules for integration over a triangle ABC are well known. In this note, we discuss conical product rules with weight function w(x)r/sup β/ where r is the distance of (x,y) from C and x is the distance of (x,y) from AB. In particular we show how to construct rules which are exact for integrand functions p/sub λ/(x,y)h/sub μ/(r) where p/sub λ/ and h/sub μ/ are polynomials of degree λ and μ, respectively.

25269 **(DOE/EI/11865—T1-Vol.1) ADP requirements study report. Volume 1. ADP requirements statement.** (One America, Inc., Washington, DC; CAP Gemini, Inc., Vienna, VA (USA)). 30 Sep 1982. Contract AC01-81EI11865. 64p. NTIS, PC A04. Order Number DE83007598.

Paper copy only, copy does not permit microfiche production.

This report details the projected ADP requirements through FY 1985 for the data center operated by the Energy Information Administration (EIA). In addition, the mission needs which drive these requirements are documented.

25270 **(DOE/EI/11865—T1-Vol.4) ADP requirements study report. Volume IV. Analysis of alternative options: projected ADP requirements.** (One America, Inc., Washington, DC; CAP Gemini, Inc., Vienna, VA (USA)). 30 Sep 1982. Contract AC01-81EI11865. 24p. NTIS, PC A02/MF A01. Order Number DE83007688.

The material presented is an analysis of alternative methods which are available to EIA for satisfying projected ADP resource requirements through FY 1985. A comparison of actual utilization for the first eight months of FY 1982 versus projected usage is provided.

25271 **(DOE/EI/11865—T1-Vol.5) ADP requirements study report. Volume V. Procurement specifications statement.** (One America, Inc., Washington, DC; CAP Gemini, Inc., Vienna, VA (USA)). 30 Sep 1982. Contract AC01-81EI11865. 46p. NTIS, PC A03/MF A01. Order Number DE83007948.

This document contains an update of the previously prepared functional specifications based on the revised requirements statement which was prepared. As a result of the study effort, it was determined that the current EIA data processing configuration will satisfy projected requirements through FY 1985. Based on this fact coupled with uncertainty in DOE's organizational structure and projected conversion impacts, it is recommended that EIA attempt to extend GSA authorization of the current configuration. However, this specification has been prepared to support EIA acquisition efforts if GSA approval for continuation of existing operations cannot be obtained. The specification is written to allow for a free and open competitive procurement in accordance with GSA guidelines.

25272 (HMI—373, pp 82-84) **Hardware developments.** Drescher, B.; Hsin-Hsin Ho; Raab, R.; Roeschert, G.; Unverdross, C.; Ziem, P. 1982. (In German). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83780416.

Published in summary form only.
In Scientific progress report 1981.

25273 (HMI—373, pp 85-88) **Software developments.** 1982. (In German). NTIS (US Sales Only), PC A09/MF A01. Order Number DE83780416.

Published in summary form only.
In Scientific progress report 1981.

25274 (INIS-SU—122, pp vp) **Analytically solvable examples of account for instrumental resolution with the Pade approximation of resonance curves.** Vinogradov, V.N.; Gaj, E.V.; Rabotnov, N.S. 1981. (In Russian). NTIS (US Sales Only), PC A06/MF A01. Order Number DE83780189.

Microfiche only, copy does not permit paper copy reproduction. Original copy available until stock is exhausted refs.; 2 figs.
In Nuclear constants.

Fredholm integral equation of the first type with the difference kernel and a right-hand side in the form of a rational function without real poles and approximating a resonance curve is considered. The equation is solved analytically by Fourier transforms for kernels, describing three types of instrumental lines sharp exponential, smooth exponential, Lorentzian. The solution in all three cases is also a rational function.

25275 **(LA—9617-MS) Guide to MAPPER presentation graphics.** Ruhe, T. (Los Alamos National Lab., NM (USA)). Feb 1983. Contract W-7405-ENG-36. 53p. NTIS MF A01. Order Number DE83009373.

Microfiche only, copy does not permit paper copy reproduction. Original copy available until stock is exhausted.

Important, high-quality visual aids for presentations may be made easily with the MAPPER graphics utility. The focus of discussion is on making simple, but often important, text slides quickly and easily. A detailed discussion of methods to access alternate alphabet capabilities also is presented. Subsequent brief introductions to drawing and color capabilities are given. Important tips on use and presentation methods make up the final section. Appendixes of sample results and system primers are included.

25276 **(SAND—82-2975C) High-speed maximum-entropy encoder for images.** Angel, E.S. (New Mexico Univ., Albuquerque (USA). Dept. of Electrical Engineering and Computer Science; Sandia National Labs., Albuquerque, NM (USA)). 1983. Contract AC04-76DP00789. 4p. (CONF-830407—2). NTIS, PC A02/MF A01. Order Number DE83008454.

From International conference on acoustics, speech, and signal processing; Boston, MA, USA (14 Apr 1983).

A simple nonlinear memory based coding system is presented whichencodes and decodes images rapidly. The nonlinear nature of the coding system allows edges to be represented well. The coding system compares favorably to predictive coders in the one to two bits per pixel range.

25277 **(SAND—83-0041) Efficient extrapolation methods for ODEs.** Shampine, L.F. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1983. Contract AC04-76DP00789. 23p. NTIS, PC A02/MF A01. Order Number DE83009390.

Gragg proposed a way of solving the initial value problem for a system of ordinary differential equations (ODEs) which is based on repeated extrapolation of the explicit midpoint rule. To advance the integration of $y' = f(x, y)$ from an approximation y_0 to $y(x_0)$ to an approximation of $y(x_0 + H)$, one must repeatedly select an integer n/sub i/ and integrate from x_0 to $x_0 + H$ using the midpoint rule and a step size h/sub i/ = H/n/sub i/. The approximations to $y(x_0 + H)$, which are of order two, can be combined in a linear (polynomial extrapolation) or a nonlinear (rational extrapolation) way to form high order approximations. If polynomial extrapolation is done, this process amounts to a convenient way of constructing explicit Runge-Kutta formulas of increasing order. Bulirsch and Stoer worked out the many practical details involved in turning the basic idea into a code. The resulting code and its successors are so effective that extrapolation of the explicit midpoint rule is one of the most popular ways to solve the initial value problem for ODEs. Each of the Runge-Kutta formulas generated by the extrapolation process depends on the sequence [n/sub i/] selected. There are several criteria for selecting a sequence, such as the number of evaluations of f made (the number of stages of the Runge-Kutta formula), the absolute stability, and the efficiency of the resulting formula. In this paper we consider the efficiency as it is affected by the choice of [n/sub i].

25278 **(SAND—83-0132) Stored-data acquisition system.** Hauser, G.C.; Ryerson, D.E. (Sandia National Labs., Albuquerque, NM (USA)). Feb 1983. Contract AC04-76DP00789. 37p. NTIS, PC A03/MF A01. Order Number DE83009384.

Portions are illegible in microfiche products. Original copy available until stock is exhausted.

This report describes a simple inexpensive data-acquisition system with the data stored in memory for ead out after test completion and recovery of the test unit. The system is a general-purpose device with eight analog input channels feeding an eight-bit analog-to-digital converter operating at speeds to 4000 samples per second. The system is controlled by a microprocessor to allow easy adaptation to different data-acquisition tasks with only software changes.

25279 **(UCID—19681) QUIKIE: a plotting routine to produce quick and easy graphs. Reference manual.** Strout, R.E. II. (Lawrence Livermore National Lab., CA (USA)). Feb 1983. Contract W-7405-ENG-48. 22p. NTIS, PC A02/MF A01. Order Number DE83009356.

QUIKIE is a plotting routine to produce quick and easy two-dimensional data graphs. QUIKIE allows the user to produce basic black and white or color graphs and display them on a TMDS monitor. The capability for production of presentation quality graphs is also provided. The user may overlay two or more data sets upon the same graph, allowing comparison or validation of the data. Graphic information is stored in a UX80 plot-file which can then be sent for processing to a RJET printer, TMDS monitor, high resolution hardcopy or viewgraph, or FR80/DICOMED generated film.

25280 **Painleve property for partial differential equations.** Weiss, J.; Tabor, M.; Carnevale, G. (Center for Studies of Nonlinear Dynamics, La Jolla Institute, La Jolla, California 92038). *Journal of Mathematical Physics (New York);* **24**: No. 3, 522-526(Mar 1983).

In this paper we define the Painleve property for partial differential equations and show how it determines, in a remarkably simple manner, the integrability, the Baecklund transforms, the linearizing transforms, and the Lax pairs of three well-known partial differential equations (Burgers' equation, KdV equation, and the modified KdV equation). This indicates that the Painleve property may provide a unified description of integrable behavior in dynamical systems (ordinary and partial differential equations), while, at the same time, providing an efficient method for determining the integrability of particular systems.

25281 **QDF misclassification probabilities for known population parameters.** Bayne, C.K. (Union Carbide Corp., Oak Ridge, TN); Tan, W.Y. *Communications in Statistics, (Part A), Theory and Methods;* **10**: No. 22, 2315-2326(1981).

Approximated QDF misclassification probabilities have been derived for bivariate normal populations with known parameter values. The effect of unequal covariances and population distance on the misclassification probabilities are examined.

25282 **(DOE/IG—105) Public access to classified reports at the Los Alamos Scientific Laboratory.** (Department of Energy, Washington, DC (USA). Office of Inspector General). 26 Mar 1980. 67p. TIC. Order Number DE83006127.

Report to the Secretary, Deputy Secretary.

Circumstances surrounding the discovery of UCRL-4725, a nuclear weapons report, on the open shelves of a LASL public library are discussed. Instances of erroneous use of declassification marking are documented in the report series that included the above report. However, no staff person had checked for similar mistakes in declassification. Recommendations are presented to move this unclassified report to its vault for classified materials and that the person responsible for LASL's failure to report to DOE the security violations be disciplined. Comments to the draft report are appended. (PSB)

25283 **(DOE/NBM—3008953) Information protection and control.** Spath, C.E. (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). 20 Jan 1981. 17p. NTIS, PC A02/MF A01. Order Number DE83008953.

Portions are illegible in microfiche products.

This summary defines information protection and control as the government's legitimate role in determining the availability and accessibility of certain information and its responsibility for protecting and controlling that information. It identifies the principle issues, problems and impacts, gives a current status overview, states energy related issues and DOE involvement, gives key references and includes a bibliography of related references. (GHT)

25284 **(DOE/TIC—3008728) Information for technology innovation. Summary paper.** Stuber, C.E. (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). 20 Jan 1981. 14p. NTIS, PC A02/MF A01. Order Number DE83008728.

Research and development are integral parts of the innovation process, but they make no economic contribution unless the knowledge generated is integrated into the production process or manifested in a new or improved product that is sold on the market. Successful innovation depends in a large part on the effective integration of market and technical information by the innovating organization. Various Congressional and Executive actions have been taken in the last few years to enhance technology transfer and information transfer to assist in the process. The DOE Technical Information Center has the following ongoing programs to promote innovation through increased information availability: (1) a technology-transfer program to announce information, devices, or processes with potential application in industry; (2) bilateral and multilateral information-exchange agreements to acquisition the international energy-related information; (3) a computerized Technical Information Management System to ensure proper and timely reporting of DOE-sponsored R and D information; (4) a computerized Research in Progress retrieval system containing information about DOE ongoing research projects; (5) a computerized Energy Data Base retrieval system containing information on all foreign and domestic energy-related R and D; and (6) a series of publications to announce all energy-related R and D information. Also the Office of Energy Research, DOE Headquarters, is coordinating the technology transfer program of the DOE Federal Laboratories.

25285 **(DOE/TIC—3008954) Transborder flow of information. Summary paper.** Stuber, C.E. (Department of Energy, Oak Ridge, TN (USA). Technical Information Center). 20 Jan 1981. 20p. NTIS, PC A02/MF A01. Order Number DE83008954.

Transborder data flow or transnational data flow connotes the process or act of moving information across national borders. This summary paper is not restricted to data intended for processing and storage in automated data-processing systems, but includes the communication and use of information in the very widest sense, covering all forms of recorded and transmitted information expressed in graphic, written, spoken, electronic, printed, recorded, and film form. Categories of information flow include production and distribution control, financial management and planning, travel reservations, scientific research and development, environmental monitoring, financial transactions, personnel and payroll data, government and public authority data, etc. The issues and problems involved tend to focus on digitally-coded, computer-processed information, but the concerns apply generally to all forms of recorded and transmitted data, particularly in the case of scientific and technical information. News-gathering activities and general communications, however, are considered outside the scope of the present discussion.

25286 **(NASA-SP—7043(29)) Energy: a continuing bibliography with indexes (issue 29).** (National Aeronautics and Space Administration, Washington, DC (USA)). Apr 1981. 420p. NTIS, PC $15.00.

This bibliography lists 1360 reports, articles, and other documents introduced into the NASA scientific and technical information system from January 1, 1981 through March 31, 1981.

25287 **(DOE/EI/11865—T1-Vol.3-App.E) ADP requirements study report. Volume III. Appendix E.** (One America, Inc., Washington, DC; CAP Gemini, Inc., Vienna, VA (USA)). 30 Sep 1982. Contract AC01-81EI11865. 284p. NTIS, PC A13. Order Number DE83007783.

Paper copy only, copy does not permit microfiche production.

The justification is given for the FY 1982/FY 1983 requirements for data processing in the Energy Information Administration. This justification is presented in terms of project needs; that is, ADP support requirements are tied to specific organizations, objectives, and mandates. (GHT)

25288 (DOE/EI/11865—T1-Vol.2-A-D) ADP Requirements Study Report. Volume II. Appendices A, B, C and D. (One America, Inc., Washington, DC; CAP Gemini, Inc., Vienna, VA (USA)). 30 Sep 1982. Contract AC01-81EI11865. 128p. NTIS, PC A07. Order Number DE83007944.

Paper copy only, copy does not permit microfiche production.

The appendices describe data base management systems supported by the EIA computer center and their usage, and the detailed FY 1981 computer utilization baseline for the EIA center. A listing of ADP usage by organization and project within the EIA is given. The current organization structure of the EIA is described, including support services provided by EIA personnel, and performance of optimization techniques designed to achieve maximum computer usage and throughput. (GHT)

CORPORATE AUTHOR INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Information Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Analysis of recent fuel-disruption experiments, 8:23589 (R;US)
Analysis of short-rotation forests using the Argonne model for selecting economic strategy (MOSES), 8:23256 (R;US)
Analysis of the separation of protium from blanket tritium-product streams, 8:24825 (R;US)
Application of debris-bed dryout data to CONACS-1 modeling, 8:23599 (R;US)
Application of polyalgorithmic optimization to MHD power plant design, 8:23771 (R;US)
Applications of the DC-relaxation technique in Li-Al/FeS cell development, 8:23677 (R;US)
Approach to modelling vegetation yield reduction from point-source emissions of sulfur dioxide, 8:24400 (R;US)
Argonne Energy Model - Portugal, 8:23692 (R;US)
Assessment of cool storage in commercial building applications, 8:23664 (R;US)
ATM; atmospheric transport & diffusion model, 8:24227 (R;US)
Atomic defects and diffusion in metals, 8:23936 (R;US)
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4, 8:23999 (R;US)
Band model for d- and f-metals, 8:23946 (R;US)
Batteries for electric vehicles, 8:23885 (R;US)
Batteries for load leveling, 8:23408 (R;US)
BEACON/MOD3; containment system fluid flow, 8:23579 (R;US)
Beam-foil spectroscopy at Argonne National Laboratory, 8:24517 (R;US)
Calculation of thermophysical properties of sodium, 8:23516 (R;US)
Case for electricity: an applications approach, 8:23728 (R;US)
Characterization of defects in metals by positron-annihilation spectroscopy, 8:23953 (R;US)
CHART; iodine decay heat on charcoal adsorbers, 8:23583 (R;US)
Cogeneration and emission offsets in nonattainment areas, 8:23700 (R;US)
COMB; 1-dimensional high-temperature coal combustor model, 8:23765 (R;US)
Common problems in modeling of thermal plumes in air and water, 8:24252 (R;US)
Community energy audit: a discussion of process, resources, and potential problems, 8:23754 (R;US)
Computer optimization of landfill-cover design, 8:23871 (R;US)
COMRC1; slag transport models for MHD systems, 8:23766 (R;US)

Conceptual design of the INTOR first-wall system, 8:24823 (R;US)
CONF; conference attendee & speaker data file, 8:25254 (R;US)
Content of local-energy-management programs, 8:23703 (R;US)
Control of energy transfer with an inductor-convertor bridge, 8:24102 (R;US)
Corrosion problems associated with solar fluid and components, 8:23315 (R;US)
Current status of the lithium/metal sulfide system, 8:23678 (R;US)
Current-pulse measurements of Li-Al/FeS cells, 8:23675 (R;US)
DAP; deuterium depth profile in uniform solids, 8:23993 (R;US)
Data acquisition system for the neutron scattering instruments at the intense pulsed neutron source, 8:24172 (R;US)
Demonstration tokamak-power-plant study (DEMO), 8:24816 (R;US)
DENDRO; hierarchical cluster analysis of data, 8:25255 (R;US)
Development of the rf linear accelerator test bed for heavy-ion fusion, 8:24822 (R;US)
Diffusion mechanisms in transition-metal oxides, 8:23995 (R;US)
Direct solar steam-generating system, 8:23316 (R;US)
Disaggregation, input-output analysis, and energy impacts, 8:23685 (R;US)
DISPL1; 1- and 2-dimensional kinetics-diffusion partial differential equations solution, 8:24569 (R;US)
DN detection during SLSF tests, 8:23587 (R;US)
DOE/ANL/HTRI heat-exchanger-tube vibration data bank, 8:23846 (R;US)
DPOLE; helmholtz equation on general 3-dimensional region, 8:25246 (R;US)
DRIFT; cooling tower drift eliminator analysis, 8:23399 (R;US)
DSNP; dynamic simulation nuclear power plants, 8:23539 (R;US)
Economic evaluation of competing industrial waste-heat-recovery technologies, 8:23856 (R;US)
Effect of NO_2 and SO_2 alone and in combination on the productivity of field-grown soybeans, 8:24406 (R;US)
Effect of particle stratification on debris-bed dryout, 8:23598 (R;US)
Effect of reduced enrichment on the fuel cycle for research reactors, 8:23576 (R;US)
Effect of secondary combustion on nitric oxide concentrations in a MHD combustion gas, 8:23767 (R;US)
Effects of irradiation on ceramics for fusion-reactor applications, 8:23992 (R;US)
Effects of resonances in molecular photoionization measured with triply differential photoelectron spectroscopy, 8:24519 (R;US)
Electrode characterization of Li-Al/FeS cells, 8:23674 (R;US)
Electronic structure and formation energy of a vacancy in aluminum, 8:23937 (R;US)
Electrostatically augmented gas-cleanup devices for particular removal, 8:22947 (R;US)
Environmental and health aspects of waste-to-energy systems, 8:24402 (R;US)
Environmental monitoring considerations for low-level waste disposal sites, 8:23183 (R;US)
Evaluation of structural integrity of IPNS-I and ZING-P' targets, 8:24171 (R;US)
EVITS; steady state two-dimensional fluid flow, 8:24568 (R;US)
Experimental investigations of long-term interactions of molten UO_2 with MgO and concrete at Argonne National Laboratory, 8:23595 (R;US)
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium, 8:23596 (R;US)
Exploratory and basic fluidized-bed combustion studies. Annual report, October 1980-September 1981, 8:24148 (R;US)
Fermi-surface properties of $CeSn_3$ and related compounds, 8:23947 (R;US)
Flow-induced vibration of a curved tube array subject to liquid cross flow, 8:23469 (R;US)
Forecasts of intercity passenger demand and energy use through 2000, 8:23843 (R;US)
Formation energy of point defects in free surfaces and grain boundaries in MgO, 8:24000 (R;US)
FUELS DATA; model verification fuel rod data, 8:23446 (R;US)
GASPAR; evaluation of atmospheric releases, 8:24248 (R;US)
Getting metal-hydrides to do what you want them to, 8:23215 (R;US)
Heat transfer in slagging MHD radiant boilers, 8:23770 (R;US)
Hydrides of oxygen-stabilized intermetallic phases, 8:23998 (R;US)
Hydrogen absorption and temperature programmed desorption (TPD) studies of iron- and chromium-substituted ZrV_2, 8:23214 (R;US)
Hyperfine structures of the nd $^1D(n = 3 - 8)$ states of ^3He I, 8:24518 (R;US)
IBM NJE protocol emulator for VAX/VMS, 8:25266 (R;US)
ICOP; financial model industrial cogeneration, 8:23406 (R;US)
Important material considerations in INTOR, 8:24820 (R;US)
Improved method for predicting seasonal and annual shadowing from cooling-tower plumes, 8:24401 (R;US)
Influence of detector geometry on AEM-based x-ray microanalysis. I. Theoretical, 8:24046 (R;US)
Initiation and development of deformation heterogeneities in superplastic materials, 8:24739 (R;US)
Interaction and penetration of heated UO_2 with limestone concrete, 8:23597 (R;US)
Intercomparison of MAP3S models of long-range transport and deposition, 8:24231 (R;US)
Interstitial site occupation in ZrNiH, 8:23997 (R;US)
Ion-bombardment-induced subsurface composition modifications in alloys at elevated temperatures, 8:23932 (R;US)
IP2D.REV1; resistivity & induced-polarization, 8:23367 (R;US)
IPNS distributed-processing data-acquisition system, 8:24173 (R;US)
Isotope correlations for safeguards surveillance and accountancy methods, 8:23190 (R;US)
Issues in defining standards for documentation, 8:25267 (R;US)
10-kA pulsed power supply for superconducting coils, 8:24821 (R;US)
Key features of INTOR nuclear systems, 8:24819 (R;US)
LADTAP2; liquid pathway dose calculations, 8:24293 (R;US)
Landfill gas recovery in the USA, 8:23873 (R;US)
LCLSQ1; linear least squares with constraints, 8:25264 (R;US)
Linear transport theory and an indefinite Sturm-Liouville problem, 8:24722 (R;US)
LINPACK; simultaneous linear algebraic equations, 8:25242 (R;US)
Local-government energy-conservation programs and their impact on rental buildings, 8:23704 (R;US)
L2RMAT; coupled channel inelastic scattering, 8:24747 (R;US)
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R;US)
Materials engineering of metal hydrides, 8:23216 (R;US)
Mathematical model for evaluating the suitability of a low-level radioactive waste site, 8:23119 (R;US)
Mathematical modelling of thermal-plume interaction at Waterford Nuclear Power Station, 8:23573 (R;US)
Metamagnetism of palladium, 8:23894 (R;US)
Midwest region energy outlook, 8:23686 (R;US)
Mission analysis of second cars to determine electric-vehicle suitability, 8:23883 (R;US)
Modeling industrial-boiler retirement economics, 8:23696 (R;US)
Molecular dynamics studies of superionic conductors, 8:24031 (R;US)
Molecular-dynamics simulation of displacement cascades in Cu: analysis of replacement sequences, 8:23934 (R;US)
Molecular-dynamics study of 2-D melting: long-range potentials, 8:24520 (R;US)
NALAP; LMFBR transient response to accident, 8:23581 (R;US)
Neutronic analysis of graphite-moderated solid breeder design for INTOR, 8:24824 (R;US)
New data on the heat capacity of liquid ^3He, 8:24570 (R;US)
New method for the preparation of fast-conducting, reactive-glass systems, 8:24029 (R;US)
NJE; VAX-VMS IBM NJE network protocol emulator, 8:25260 (R;US)
NONSAP-C; nonlinear stress concrete structures, 8:24026 (R;US)
Note on cubature over a triangle of a function having specified singularities, 8:25268 (R;US)
NUBOW-2D Inelastic; bowed reactor core analysis, 8:23514 (R;US)
Nuclear forces and nuclear matter including pions and isobars, 8:24703 (R;US)
Nuclear power industry, 1981, 8:23442 (R;US)
Observation of a first-order phase transition in single-crystal $ErRh_4B_4$ at H/sub c2/, 8:24002 (R;US)
OCOPTR;DRVOCR; unconstrained optimization, 8:25233 (R;US)
Off-design study of an open cycle MHD power plant with oxygen enrichment, 8:23769 (R;US)
On-line laser spectroscopy with a cooled He-jet transport system, 8:24174 (R;US)
Optical observations of molecular dissociation in thin foils, 8:24514 (R;US)
OPTIMIZERS; nonlinear optimization subroutines, 8:25252 (R;US)

Organisms and compounds of unnatural isotopic composition in NMR, 8:24348 (R;US)
Organizational approach to estimating public resistance at proposed disposal sites for radioactive and hazardous wastes, 8:23120 (R;US)
Ostwald ripening of precipitates and irreversible phenomena, 8:24056 (R;US)
Overview of boom towns and construction efficiency interactions, 8:23697 (R;US)
Patterns of change in the business community of energy boomtowns, 8:23698 (R;US)
PDEONE; solutions of partial differential equations, 8:25239 (R;US)
Performance advantages of a gas-stream MHD retrofit, 8:23772 (R;US)
Performance of a 10-cell LiAl/metal sulfide battery, 8:23672 (R;US)
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R;US)
PFR/TREAT CO1 and LO1 experiments, 8:23593 (R;US)
PFR/TREAT programme: objectives, progress and future work, 8:23590 (R;US)
Phenomenological studies of HCDA issues, 8:23594 (R;US)
Photoelectron spectrometer for high-resolution angular resolved studies, 8:24209 (R;US)
Physical engineering and environmental aspects of ocean kelp farming. Final report, January 1982-September 1982, 8:23257 (R;US)
Positron annihilation in solid and liquid Ni, 8:23940 (R;US)
Positron prevacancy effects in pure annealed metals, 8:23893 (R;US)
Positron-annihilation characteristics in real solids including many-body enhancement effects, 8:24721 (R;US)
Positron-annihilation measurements of vacancy formation in Ni and Ni(Ge), 8:23941 (R;US)
Positron-annihilation spectroscopy of vacancy defects in aluminum, 8:23939 (R;US)
Positron-annihilation study of the equilibrium vacancy ensemble in aluminum, 8:23942 (R;US)
Predicting the performance and cost of ORC waste-heat-recovery systems, 8:24157 (R;US)
PROSA2; probabilistic response surface studies, 8:23580 (R;US)
PTA1; pipe system pressure analysis, 8:23510 (R;US)
PUBG; purex solvent extraction process model, 8:23111 (R;US)
PWR systems transient analysis: a reactor-safety perspective, 8:23600 (R;US)
Radium dial workers, 8:24364 (R;US)
RANDOM NUMBERS; obtained from U235 alpha decay, 8:25256 (R;US)
Re-examination of the threshold energy surface in copper, 8:23935 (R;US)
Regional analysis of potential impacts of electric and hybrid vehicles on electric utilities, 8:23729 (R;US)
Release of fission products from irradiated aluminide fuel at high temperature, 8:23604 (R;US)
Residential fuel comparison patterns for poor, black, and elderly households: a comparative study. Vol I. Data base development, 8:23793 (R;US)
Resonances in s-d shell nuclei, 8:24651 (R;US)
Review of the effects of the Clean Water Act on cooling-system selection by the steam-electric industry, 8:23427 (R;US)
Risk estimates for bone, 8:24363 (R;US)
RO75; reverse osmosis desalting plant design, 8:24093 (R;US)
Role of the breeder in long-term energy economics, 8:23701 (R;US)
Scaling criteria for LWR's under single-phase and two-phase natural circulation, 8:23603 (R;US)
SCHAFF; heat & water transfer in porous media, 8:23362 (R;US)
Segregation in irradiated titanium alloys, 8:23931 (R;US)
Selection of low-risk design guidelines for energetic events, 8:23591 (R;US)
Shell structure at high spin and the influence on nuclear shapes, 8:24681 (R;US)
Simulation of thermal-transient-induced-pipe-flow stratification using COMMIX-2, 8:23542 (R;US)
SLACKLY; 1-dimensional multicavity klystron tube analysis, 8:24166 (R;US)
SLGTR; slag transport models for duct surfaces, 8:23764 (R;US)
Socio-technical scenarios for long-range transportation technology comparisons, 8:23841 (R;US)
Soft phonon modes and superconductivity in C-15 compounds, 8:23945 (R;US)
SOLA-DF; transient 2-dimensional 2-phase flow, 8:24136 (R;US)
Solar liquid-metal MHD performance predictions, 8:23299 (R;US)
SOLTES1; thermal energy systems simulation, 8:23663 (R;US)
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R;US)
Some specialized radiological-safety considerations at Argonne National Laboratory's Heavy Ion Research Facility (SAR, Shielding Design, Q.F.'s, HIRC), 8:24175 (R;US)
Spectroscopic properties of the f-elements in compounds and solutions, 8:24078 (R;US)
Sputter-induced erosion of alkali metal surfaces - AES, XPS and SIMS studies, 8:24759 (R;US)
SPXCPL; two-dimensional modeling of self-potential effects, 8:23366 (R;US)
Standardized test methods for investigating attrition and elutriation characteristics of natural sorbents in fluidized-bed coal combustors, 8:24149 (R;US)
Start-up and performance of a high-sulfur dry-scrubber system, 8:22946 (R;US)
Static-mode laser-fluorescence spectroscopy: a new technique for studying excitation mechanisms in particle-surface collisions, 8:24521 (R;US)
Status and validation of the SAS4A accident-analysis code system, 8:23592 (R;US)
Status of fast-breeder-reactor safety, 8:23602 (R;US)
Status of improved lead-acid, nickel/iron, and nickel/zinc batteries being developed under DOE's electric vehicle battery program, 8:23676 (R;US)
Storing solar energy in thermally stratified tanks, 8:23356 (R;US)
Structure and conductivity of the NASICON analog $Na_3SC_2(PO_4)_3$, 8:24058 (R;US)
Structures for common-cause failure analysis, 8:23586 (R;US)
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R;US)
Successes and failures of the constituent quark model, 8:24605 (R;US)
Superconductivity in Au-Cr-Au and Ag-Pd-Ag epitaxial metal film sandwiches, 8:23944 (R;US)
Surface segregation in concentrated Ni-Cu alloys under irradiation, 8:23943 (R;US)
SWIFT; waste-isolation flow & transport model, 8:23377 (R;US)
Terminal lens for an FN tandem, 8:24159 (R;US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R;US)
Three-dimensional thermal modeling of eV batteries, 8:23884 (R;US)
Threshold energy surface and Frenkel-pair resistivity for Cu, 8:23948 (R;US)
TIMEX; 1-dimensional time-dependent multigroups discrete ordinates, 8:24717 (R;US)
Tokamak reactor cost model based on STARFIRE/WILDCAT costing, 8:24818 (R;US)
Tube crossflow force measurements, 8:23541 (R;US)
TVENT; ventilation system transient analysis, 8:24089 (R;US)
U-25B MHD-generator performance, 8:23768 (R;US)
UDAD; uranium dispersion & dosimetry model, 8:23187 (R;US)
US RERTR program, its fuel-development activities, and application in the KUHFR, 8:23575 (R;US)
Using an electrostatic accelerator to determine the stereochemical structures of molecular ions, 8:24516 (R;US)
UV-laser photofragmentation of a 2-MeV H_2^+ beam, 8:24515 (R;US)
Vacancy formation in Ni and Ni(Ge), 8:23933 (R;US)
Vapor pressures and vapor compositions in equilibrium with hypostoichiometric plutonium dioxide at high temperatures, 8:24001 (R;US)
VIVAS2; A-BC exact coupled channel scattering, 8:24513 (R;US)
Wet and dry surface deposition of air pollutants and their modeling, 8:24230 (R;US)
XERROR; Fortran library error-handling package, 8:25263 (R;US)
XPS study of CaO in sodium silicate glass, 8:24030 (R;US)

Arizona State Univ., Tempe (USA)
Analytical and experimental investigations of sodium heat pipes and thermal energy storage systems. Final report oct 80-sep 81, 8:24083 (R;US)

Army Engineer Waterways Experiment Station, Vicksburg, MS (USA). Geotechnical Lab.
Trench design and construction techniques for low-level radioactive waste disposal, 8:23155 (R;US)

Artec Associates, Inc., Hayward, CA (USA)
High power pulsed plasma MHD experiments. Annual report 1 Jan 81-30 Sep 82, 8:23763 (R;US)
Ashland Synthetic Fuels, Inc., KY (USA)
Zimpro's biophysical treatment and wet-air-regeneration-system engineering study for H-COAL wastewater, 8:22951 (R;US)
Zimpro's biophysical-treatment-system stress testing of the H-COAL wastewater, 8:22950 (R;US)
Atkinson, Dwyer and Klemin, Bismarck, ND (USA)
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis, 8:23232 (R;US)
Atomic Energy Board, Pelindaba, Pretoria (South Africa)
PELSHIE2; point kernel integration shielding, 8:24720 (R;US)
Atomics International Div., Canoga Park, CA (USA)
SOMIX1; sodium spray fires in cylindrical cell, 8:23508 (R;US)
Australian Atomic Energy Commission, Sutherland
BENDPAC; stress analysis of flanged pipe bends, 8:24099 (R;US)
Australian Coal Industry Research Labs. Ltd., North Ryde
Investigations into monolithic pump packing as a means of underground roof support. Part B: field trials at South Bulli 'B' Mine and mathematical modelling, 8:22967 (R;AU)

Babcock and Wilcox Co., Alliance, OH (USA). Research and Development Div.
Computational tools for pulverized-coal combustion. Sixth quarterly report, July 1982-September 1982, 8:22999 (R;US)
Babcock and Wilcox Co., Alliance, OH (USA). Research Center
Examination of Tube Samples 21-46 and 28-45 from the Ginna Nuclear Plant for intergranular attack, 8:23500 (R;US)
Babcock and Wilcox Co., Lynchburg, VA (USA)
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R;US)
Babcock and Wilcox Co., Lynchburg, VA (USA). Lynchburg Research Center
EPRI/B and W cooperative program on PWR fuel-rod performance. Final report, 8:23498 (R;US)
Battelle Columbus Labs., OH (USA)
HAARM3; aerosol behavior log-normal dist model, 8:23582 (R;US)
Inorganic compound identificatioon of fly ash emissions from municipal incinerators. Final report, 8:24051 (R;US)
Battelle Memorial Inst., Columbus, OH (USA). Office of Nuclear Waste Isolation
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R;US)
Battelle Pacific Northwest Labs., Richland, WA (USA)
Development and characterization of electric power conservation and supply resource planning options, 8:23717 (R;US)
Intercomparison of MAP3S models of long-range transport and deposition, 8:24231 (R;US)
Bayerische Landesanstalt fuer Landtechnik, Freising (Germany, F.R.)
Straw processing, 8:23864 (R;DE;In German)
Bechtel Northern Corp., Gaithersburg, MD (USA)
Quick Look inspection: report on the insertion of a camera into the TMI-2 reactor vessel through a leadscrew opening, 8:23504 (R;US)
Beck (R.W.) and Associates, Denver, CO (USA)
BECKDRY; dry cooling for steam-electric plants, 8:23398 (R;US)
Bell Telephone Labs., Inc., Murray Hill, NJ (USA)
Influence of detector geometry on AEM-based x-ray microanalysis. I. Theoretical, 8:24046 (R;US)
Bendix Corp., Kansas City, MO (USA)
ADVCON; advance control 93 APT postprocessor, 8:24095 (R;US)
ANOVA; three factor analysis of variance, 8:25247 (R;US)
BXAMER; hustler two-axis lathe APT postprocessor, 8:24097 (R;US)
Cable-positioning fixtures. Final report, 8:24101 (R;US)
OKUMA; OKUMA two-axis lathe APT postprocessor, 8:24098 (R;US)
PTTOPT; point-to-point tool APT postprocessor, 8:24096 (R;US)
Visual-response indicator for bar-code-reader input. Final report, 8:25265 (R;US)
Bendix Field Engineering Corp., Grand Junction, CO (USA)
Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R;US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R;US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R;US)
Black and Veatch, Kansas City, MO (USA)
Solar Pilot Plant Phase I, detailed design report: thermal storage subsystem research experiment. CDRL Item No. 8 (Approved), 8:23303 (R;US)
Bochum Univ. (Germany, F.R.). Abt. Maschinenbau und Konstruktiven Ingenieurbau
Yield of the oxidation of very rarefied propane/air mixtures in catalytic fluidized beds, 8:24571 (R;DE;In German)
Boeing Computer Services Co., Seattle, WA (USA)
Intermediate photovoltaic system application experiment operational performance report. Volume 14. For Beverly High School, Beverly, Massachusetts for October 1982, 8:23293 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Volume 15. For Beverly High School, Beverly, MA for November 1982, 8:23294 (R;US)
Intermediate photovoltaic system application experiment operational performance report. Volume 16. For Beverly High School, Beverly, MA for December 1982, 8:23295 (R;US)
Bonn Univ. (Germany, F.R.). Physikalisches Inst.
Direct determination of the quark density ratio d(x)/u(x) in the proton from νp and anti νp interactions, 8:24604 (R;DE)
Particle-two particle interaction in configuration space, 8:24748 (R;DE)
Relations between irreducible representations of the hyperoctahedral group and O(4) and SO(4), 8:24630 (R;DE)
Results from PETRA, 8:24575 (R;DE)
Test of three-body separable pole expansions at negative and positive energies, 8:24749 (R;DE)
Booz, Allen and Hamilton, Inc., Cleveland, OH (USA)
Automated rail-haulage system. Final technical report as of November 30, 1982, 8:22984 (R;US)
Boyd (John T.) Co., Pittsburgh, PA (USA)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VIII. Coal quality analysis, 8:23236 (R;US)
Brandeis Univ., Waltham, MA (USA). Dept. of Physics
Positron-annihilation spectroscopy of vacancy defects in aluminum, 8:23939 (R;US)
Positron-annihilation study of the equilibrium vacancy ensemble in aluminum, 8:23942 (R;US)
British Carbonization Research Association, Chesterfield
Moisture determination by microwave heating, 8:22941 (R;GB)
The influence of tar and pitch additions to caking coals on the anisotropic composition and microstrength of coke, 8:22911 (R;GB)
Brookhaven National Lab., Upton, NY (USA)
1982 breeding bird censuses and summary of 1977-1982 results, 8:24266 (R;US)
Application of reduction methods to nuclear power plant structures, 8:23634 (R;US)
BECOM-BNL; buildings energy optimization model, 8:23795 (R;US)
Development of a fully synthetic tape insulation for lapped power cables, 8:23432 (R;US)
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R;US)
Intercomparison of MAP3S models of long-range transport and deposition, 8:24231 (R;US)
Photovoltaic energy systems: environmental concerns and control technology needs, 8:23277 (R;US)
Radioactively induced noise in gas-sampling uranium calorimeters, 8:24195 (R;US)
Solidification of oils and organic liquids, 8:23118 (R;US)
Some basic questions in organic superconductivity, 8:24028 (R;US)
Theory of anion ordering in TMTSF compounds, 8:24027 (R;US)
Very small ionization pressure gauge, 8:24144 (R;US)

Brown Boveri Electric, Inc., Chalfont, PA (USA)
Metal-oxide surge arresters for gas-insulated systems, Phases I and II. Final report, 8:23438 (R;US)
Brown, Boveri und Cie A.G., Heidelberg (Germany, F.R.). Zentrales Forschungslabor
Latent heat storage for solar energy systems, 8:23357 (R;XE;GE)
Bundesministerium fuer Forschung und Technologie, Bonn (Germany, F.R.)
10 kW - solar power station and power plant optimizing, 8:23298 (R;DE;In German)
20 kW fuel cell units of compact assembly. Pt. 3, 8:23786 (R;DE;In German)
20 kW fuel cell units of compact assembly. Pt. 6, 7, 8:23789 (R;DE;In German)
20 kW fuel cell units of compact design. Pt. 1, 2, 8:23785 (R;DE;In German)
20 kW-fuel cell units by compact assembly. Pt. 4, 8:23787 (R;DE;In German)
20 kW-fuel cell units of compact assembly. Pt. 5, 8:23788 (R;DE;In German)
Bipolar lead accumulator cell with high energy density, 8:23671 (R;DE;In German)
Catalysts and relations of selectivity for the Fischer-Tropsch-Synthesis, 8:22915 (R;DE;In German)
Connection between air permeability of joints of windows and exchange of air in the room, 8:23801 (R;DE;In German)
Development and integration of operational planning models for the coal mining industry in the Federal Republic of Germany (short title: Mining planning models), 8:22971 (R;DE;In German)
Development and preparation of industrial scale manufacturing processes for a modular solar-assisted house-heating-system, 8:23351 (R;DE;In German)
Development of a crude gas/air fuel cell system, 8:23783 (R;DE;In German)
Development of a lead tetrafluoroborate accumulator, 8:23670 (R;DE;In German)
Development of a methane measuring equipment for several measuring points, 8:23008 (R;DE;In German)
Development of a telemetry system for seismic application, 8:23012 (R;DE;In German)
Development of an optimizing method for the design of pipe systems in the ground used as heat source for heat pumps, 8:23855 (R;DE;In German)
Development of dry-filter dust extractors to reduce dust development during operation of heading machines, 8:24229 (R;DE;In German)
Development of noise-abatement aids in underground mining operations, 8:22970 (R;DE;In German)
Directionally solidified eutectic superalloys for stationary gas turbines, 8:23407 (R;DE;In German)
Electrodes and diaphragms for fuel cells, 8:23784 (R;DE;In German)
Energy analysis of solar energy systems, heat pumps and of improved insulation of single-family houses, 8:23796 (R;DE;In German)
Energy conservation by gas-fulled heat pumps for hot water space heating systems, 8:23803 (R;DE;In German)
Fuel of MSW, 8:23217 (R;DE;In German)
Fuel saving of hot water heating plants by application of heat pumps operated with natural gas (natural gas heat pump), 8:23802 (R;DE;In German)
Fuel saving of hot water heating plants by application of heat pumps operated with natural gas (natural gas heat pump), 8:23854 (R;DE;In German)
Fundamental study on the feasibility of waste heat utilization in households, 8:23848 (R;DE;In German)
Further development of automatic measuring equipment for X-ray mineral analysis with computer, 8:24496 (R;DE;In German)
Geological and geotechnical studies for the construction of pilot caverns in rock for the storage of crude oil, hydrocarbon products and LPG, 8:23045 (R;DE;In German)
Heat energy consumption and intermittent heating, 8:23800 (R;DE;In German)
High temperature properties of Si_3N_4, 8:23994 (R;DE;In German)
High temperature water vapor electrolysis (HOT ELLY), 8:23203 (R;DE;In German)
Insulation of exterior walls, placement of radiators and room climate, 8:23798 (R;DE;In German)
Investigation of the economic possibilities regarding the reduction of energy intensity for electrical household appliances. Vol. 1, 8:23797 (R;DE;In German)
Investigation of the interaction between the power electronic circuit and power supply systems, 8:23431 (R;DE;In German)
Investigation of the use of coal-waste as raw-material for the production of aluminium, 8:22944 (R;DE;In German)
Investigation of water chemical effects resulting from the application of additivs in MSF-plants, 8:23847 (R;DE;In German)
Long time corrosion testing with and without mechanical stress of high temperature alloys for blades of land based gas turbines with high output, 8:23892 (R;DE;In German)
Measuring program for hot water supply in prefabricated houses using solar energy, 8:23313 (R;DE;In German)
Optimization of combination of coal hydrogenation, Fischer-Tropsch synthesis and gasification for the production of motor fuels, 8:22914 (R;DE;In German)
Parameters influencing noise emission during hot-saw and cold-saw operations and noise reduction measures, 8:24478 (R;DE;In German)
Pilot working for the prevention of rock bumps in seam Wilhelm/Johann in Colliery Sachsen, 8:22968 (R;DE;In German)
Potential of organic residues for the production of basic chemical compounds. Pt. 1, 8:23849 (R;DE;In German)
Potential of organic residues for the production of basic chemical compounds. Pt. 2, 8:23850 (R;DE;In German)
Potential of organic residues for the production of basic chemical compounds. Pt. 3, 8:23851 (R;DE;In German)
Potential of organic residues for the production of basic chemical compounds, 8:23852 (R;DE;In German)
Process for removing sulfur oxides from gases with direct production of a usable finished reaction product, 8:22943 (R;DE;In German)
Project study gas, tar and oil production by devolatilization of power station coal, 8:22913 (R;DE;In German)
Reducing the basic emission of methane by advance drainage, 8:22969 (R;DE;In German)
Registration of shear waves, 8:24486 (R;DE;In German)
Research on the fundamentals of process control in hard coal preparation, 8:22982 (R;DE;In German)
Solar energy model Goennebek, 8:23314 (R;DE;In German)
Study on an example of heat supply from waste heat, 8:23853 (R;DE;In German)
System study on the possibilities of intensified use of solar energy in the Federal Republic of Germany (FRG), 8:23312 (R;DE;In German)
Test stations for flat plate collectors for Iran, Brazil and India, 8:23259 (R;DE;In German)
Three-dimensional migration of travel time maps, 8:23049 (R;DE;In German)
Use of computers for the documentation of supply lines, 8:23430 (R;DE;In German)
Window and its heat balance considering solar radiation and additional insulation measures, 8:23799 (R;DE;In German)

Behavior of ruthenium during reprocessing of spent reactor fuel, 8:23113 (TG;US)
Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Lab.
Economics of spent LWR fuel storage, 8:23116 (R;US)
POLUTE; forest air pollutant uptake model, 8:24301 (R;US)
TRITMOD; advection model of tritium dispersion, 8:24261 (R;US)
Two-dimensional dynamical drainage-flow model with Monte Carlo transport and diffusion calculations, 8:24234 (R;US)
Duquesne Light Co., Shippingport, PA (USA)
Shippingport Atomic Power Station. Quarterly operating report, fourth quarter 1982, 8:23470 (R;US)

E

ECA, Inc., Woodridge, IL (USA)
Corrosion problems associated with solar fluid and components, 8:23315 (R;US)
EDS Nuclear, Inc., San Francisco, CA (USA)
CONTEMPT4/MOD2; multicompartment containment, 8:23584 (R;US)
EG and G Idaho, Inc., Idaho Falls (USA)
Common-cause fault rates for instrumentation and control assemblies, 8:23631 (R;US)
Conceptual design of the INTOR first-wall system, 8:24823 (R;US)
Decontamination and decommissioning of TAN radioactive liquid-waste-evaporator system (PM-2A). Final report, 8:23123 (R;US)
DN detection during SLSF tests, 8:23587 (R;US)
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R;US)
Introductory user's manual for the US Nuclear Regulatory Commission Reactor Safety Research Data Bank, 8:23628 (R;US)
Leach tests of simulated low-level transuranic waste forms containing transuranic elements, 8:23124 (R;US)
Massachusetts low-level radioactive-waste-management survey. National Low-Level Radioactive Waste Management Program, 8:23122 (R;US)
Raft river geothermal pump disassembly and inspection, 8:23381 (R;US)
SOERP; second-order error propagation code, 8:25234 (R;US)
Submerged demineralize system processing of TMI-2 accident waste water, 8:23616 (R;US)
SUPAN; analysis of beam-type piping supports, 8:23400 (R;US)
Ultrasonic-image reconstruction with surface mapping and synthetic-aperture techniques, 8:24141 (R;US)
Electricite de France, 75 - Paris
Progress report - operating accounts in 1981, 8:23743 (R;FR;In French)
Electric Power Research Inst., Palo Alto, CA (USA)
Advanced intake technology for cooling-water intakes: current status and future direction, 8:23409 (R;US)
R and D benefits assessment - a regional approach, 8:23746 (R;US)
Seminar proceedings: municipal solid waste as a utility fuel, 8:23877 (R;US)
Electric Power Research Inst., Palo Alto, CA (USA). Nuclear Power Div.
Joint TMI-2 information and examination program: EPRI participation and support, 1982 progress and 1983 program plan, 8:23615 (R;US)
Electric Power Research Inst., Palo Alto, CA (USA). Systems and Materials Dept.
Nondestructive evaluation program: progress in 1982, 8:23464 (R;US)
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R;US)
Energie Studie Centrum, Petten (Netherlands)
Hydropower from Dutch rivers: a survey of potential and restrictions, 8:23241 (R;US;GE)

Energy Management Associates, Inc., Santa Clara, CA (USA)
Issues in implementing a load-management program for direct load control. Final report, 8:23744 (R;US)
Engelhard Minerals and Chemicals Corp., Edison, NJ (USA). Research and Development Dept.
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R;US)
Engineers International, Inc., Downers Grove, IL (USA)
Research on air sprays and unique foam-application methods. Phase II-B report: laboratory investigation of air sprays, 8:22980 (R;US)
Enviro Control, Inc., Rockville, MD (USA)
Industrial hygiene comprehensive survey, Cresap test facility, Cresap, West Virginia - a study of coal liquefaction processes. Final report, 8:23011 (R;US)
Industrial hygiene comprehensive survey. Solvent Refined coal pilot plant, Fort Lewis, Washington - a study of coal liquefaction processes. Final report, 8:24258 (R;US)
Environmental Protection Agency, Ann Arbor, MI (USA)
A brief summary of the technical feasibility, emissions, and fuel economy of pure methanol engines, 8:23237 (R;US)
Environmental Protection Agency, Montgomery, AL (USA). Eastern Environmental Radiation Facility
The Eastern Environmental Radiation Facility's participation in interlaboratory and intralaboratory comparisons of environmental sample analyses: 1979 and 1980. Final report, 8:24265 (R;US)
Environmental Research and Technology, Inc., Westlake Village, CA (USA)
Precipitation-scavenging chemistry for sulfate and nitrate from the SURE and related data. Volume 2. Final report, 8:24224 (R;US)
ERA Technology Ltd., Leatherhead (UK)
Electric Power Plant International, 8:23421 (R;US)
European Organization for Nuclear Research, Geneva (Switzerland)
High p/sub T/ π^0 production with $\alpha\alpha$ and αp beams at the CERN ISR, 8:24577 (R;US)
Exxon Nuclear Co., Inc., Richland, WA (USA)
Sphere-pac fuel development program. Semi-annual progress report, April 1982-September 1982, 8:23106 (R;US)
Exxon Nuclear Idaho Co., Inc., Idaho Falls (USA)
Mechanical-reliability evaluation of a proposed emergency-response radioiodine air sampler, 8:24249 (R;US)
Exxon Research and Engineering Co., Florham Park, NJ (USA)
EDS-coal-liquefaction process development. Phase IV. Construction of Exxon Coal-Liquefaction Pilot Plant. Final report, 8:22919 (R;US)

F

Factory Mutual Research Corp., Norwood, MA (USA)
Fire tests in ventilated rooms: detection of cable-tray and exposure fires, 8:23420 (R;US)
Federal Trade Commission, Washington, DC (USA)
Mergers in the petroleum industry: report of the Federal Trade Commission, 8:23036 (R;US)
Fermi National Accelerator Lab., Batavia, IL (USA)
Stochastic stacking without filters, 8:24194 (R;US)
Successes and failures of the constituent quark model, 8:24605 (R;US)
Filtrol Corp., Los Angeles, CA (USA)
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R;US)
Fish and Wildlife Service, Slidell, LA (USA). National Coastal Ecosystems Team
Proceedings of a workshop on cetaceans and sea turtles in the Gulf of Mexico: study planning for effects of Outer Continental Shelf development, 8:23040 (R;US)
Fish and Wildlife Service, Washington, DC (USA). Office of Biological Services
Habitat suitability index models: regression models based on harvest of cool and coldwater fishes in reservoirs, 8:24398 (R;US)
Florida Solar Energy Center, Cape Canaveral (USA)
Analytical investigations of the relative solar rating concept. Final report. Report Number FSEC 80-6, 8:23319 (R;US)
Flow Industries, Inc., Kent, WA (USA)
Development of a quiet Stirling cycle multi-fuel engine for electric power generation. Final report Feb-Aug 82, 8:23397 (R;US)
FluiDyne Engineering Corp., Minneapolis, MN (USA)
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R;US)
Fluor Engineers and Constructors, Inc., Irvine, CA (USA)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate, 8:23228 (R;US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate, 8:23229 (R;US)
Fluor Engineers, Inc., Irvine, CA (USA)
Technical and economic evaluation of retrofitting and repowering oil-fired boilers with gas from coal. Final report, 8:23416 (R;US)
Ford, Bacon and Davis Utah, Inc., Salt Lake City (USA)
Effects of moisture on radon emanation including the effects on diffusion. Open file report oct 79-Nov 81, 8:23097 (R;US)
Forest Service, Broomall, PA (USA). Northeastern Forest Experiment Station
Converting small industrial boilers to burn wood fuels. Forest Service research paper (final), 8:24153 (R;US)
Stream water quality in the coal region of Alabama and Georgia. General technical report (final), 8:22963 (R;US)
Stream water quality in the coal region of Pennsylvania. General technical report, 8:22962 (R;US)
Fort Belknap Community Council, Harlem, MT (USA)
Report to the Fort Belknap Community Council on the work undertaken during the summer, 1979, 8:23014 (R;US)
Foster Wheeler Corp., Livingston, NJ (USA). Nuclear Dept.
Foster Wheeler protected bayonet-tube steam-generator conceptual designs, 8:23518 (R;US)
Foster Wheeler Synfuels Corp., Livingston, NJ (USA)
Laboratory analyses of oil shales for US Department of Energy, Laramie Energy Technology Center, 8:23085 (R;US)
Fraunhofer-Gesellschaft zur Foerderung der Angewandten Forschung e.V., Garmisch-Partenkirchen (Germany, F.R.). Inst. fuer Atmosphaerische Umweltforschung
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides. Technical progress report, November 1, 1979-June 30, 1980, 8:24232 (R;US)
Freiburg Univ. (Germany, F.R.). Forstwissenschaftliche Fakultaet
In vivo cytogenetic effect of some salts of the heavy metals cadmium, chromium, mercury, and platinum in assays of micronuclei and sister chromatid exchange, 8:24411 (R;DE;In German)
Fuel and Mineral Resources, Inc., Reston, VA (USA)
Annotated review of the technological state-of-the-art of ethyl and methyl alcohol-based fuels and determination of the economic feasibility of commercial-scale production of such fuels, 8:23238 (R;US)

G

GAI Consultants, Inc., Monroeville, PA (USA)
Transmission-line structure foundations for uplift-compression loading. Final report, 8:23437 (R;US)
GA Technologies, Inc., San Diego, CA (USA)
Computer control and data acquisition for neutral-beam injectors, 8:24829 (R;US)
Laser-fluorescence measurements of hydrogen and metal densities in the Doublet III tokamak, 8:24763 (R;US)
GCA Corp., Bedford, MA (USA). GCA Technology Div.
Simplified approaches to protecting PSD Class I areas. Final report, 8:24302 (R;US)

General Accounting Office, Washington, DC (USA). Energy and Minerals Div.
Improvements needed in the cash management practices of Interior's simultaneous oil and gas leasing program in Wyoming, 8:23724 (R;US)
General Atomic Co., San Diego, CA (USA)
HTGR applications program. Semiannual report for the period October 1, 1980-March 31, 1981, 8:23538 (R;US)
General Electric Co., Pittsfield, MA (USA). Power Transformer Dept.
Compact gas-insulated transformer. Thirteenth quarterly report, 8:23433 (R;US)
General Electric Co., San Jose, CA (USA)
BWR refill-reflood program - TRAC-BWR component development, 8:23609 (R;US)
General Electric Co., San Jose, CA (USA). Nuclear Engineering Div.
Oxygen suppression in boiling-water reactors: Phase 2. Final report, 8:23447 (R;US)
General Electric Co., Schenectady, NY (USA). Electric Utility Systems Engineering Dept.
Assessment of distributed wind-power systems, 8:23392 (R;US)
Assessment of distributed wind-power systems. Final report, 8:23391 (R;US)
General Electric Co., St. Petersburg, FL (USA). Neutron Devices Dept.
SYSREL; reliability analysis of series systems, 8:25257 (R;US)
General Electric Co., Sunnyvale, CA (USA). Advanced Reactor Systems Dept.
BEHAVE-SST; overpower transient fuel mechanics, 8:23512 (R;US)
General Energy Associates, Cherry Hill, NJ (USA)
Economic evaluation of competing industrial waste-heat-recovery technologies, 8:23856 (R;US)
General Physics Corp., Columbia, MD (USA)
Human-reliability data bank for nuclear power plant operations. Volume 1. A review of existing human-reliability data banks, 8:23630 (R;US)
General Research Corp., McLean, VA (USA)
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R;US)
GeoEnergy Corp., Las Vegas, NV (USA)
Correlation of surficial geologic anomalies with gas production, Cottageville Field, West Virginia, 8:23055 (R;US)
Geokinetics, Inc., Salt Lake City, UT (USA)
Environmental research plan for the Geokinetics Inc. investigation of the horizontal in-situ oil-shale-retorting process. Research record, 8:23089 (R;US)
Geological Survey, Denver, CO (USA)
Two-dimensional, steady-state model of ground-water flow, Nevada Test Site and vicinity, Nevada-California, 8:24484 (R;US)
Geological Survey, Reston, VA (USA)
Comparative geochemistry of Devonian shale cores from the Appalachian Basin, Mason, Monongalia, and Upshur Counties, West Virginia; Illinois Basin, Tazwell County, Illinois; Clark County, Indiana; and Michigan Basin, Sanilac County, Michigan, 8:23061 (R;US)
Eastern Gas Shales Project (EGSP) data files: a final report. Open-file report 81-598, 8:23051 (R;US)
Geologic map and coal resources of the Thompson Creek area, Big Horn County, Montana, 8:22966 (R;US)
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R;US)
Georgetown Univ., Washington, DC (USA). Law Center
Energy security in the industrial nations, 8:23723 (R;US)
Georgia Inter-Univ. Task Force (USA)
Guidebook for evaluation of resource recovery systems in municipalities, 8:23878 (R;US)
Georgia Power Co., Shenandoah (USA)
Solar Total-Energy Project, Shenandoah, Georgia site. Annual technical progress report, July 1, 1980-June 30, 1982, 8:23301 (R;US)
Georgia Univ., Athens (USA). Dept. of Chemistry
Fractionations of non-porphyrin complexes of vanadium and nickel from Boscan crude oil, 8:24047 (R;US)
Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)
Are there superheavy atomic nuclei, 8:24705 (R;DE;In German)
Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Braunschweig (Germany, F.R.). Inst. fuer Tieflagerung
Summarized representation of the progress and results of the suitability test of the Konrad pit for final storage of radioactive wastes, 8:23125 (R;DE;In German)
Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.)
Attempting a forecast on the future occurence of pollutants in food on the basis of today's and future production figures and patterns of application of chemicals, 8:24262 (R;DE;In German)
Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Radiohydrometrie
Radionuclide migration of the elements I, Sr, Cs and Ce in subsurface loose rocks, 8:24263 (R;DE;In German)
Gesellschaft fuer Strahlen- und Umweltforschung m.b.H. Muenchen, Neuherberg (Germany, F.R.). Inst. fuer Strahlenschutz
Secondary electron spectra in the trace of fast ions travelling through water vapor, 8:24738 (R;DE;In German)
Giner, Inc., Waltham, MA (USA)
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for the fuel-cell program, 8:23781 (R;US)
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for fuel-cell program, 8:23782 (R;US)
GKSS-Forschungszentrum Geesthacht G.m.b.H., Geesthacht-Tesperhude (Germany, F.R.)
Chemisorptive discharge of hydrogen ions: An elementary step in hydrogen corrosion, 8:23954 (R;DE)
Glowny Inst. Gornictwa, Katowice (Poland)
Automation of the mud and water circulation process at coal-preparation plant - initial study, 8:22988 (R;PL)
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries, 8:22977 (R;PL)
Method of investigations, estimation and classification of roofs in mines in the United States of America for the selection of suitable mechanized support for longwalls. Report No. 2. State-of-the-art report on roof rock stability tests and powered support selection systems for longwalls, 8:22978 (R;US)
Modern underground mining technologies for pitching coalbed extraction. Report No. 2. Survey of geological and mining conditions of highly inclined and steep coalbeds, and technologies of working (mining systems) in European coalfields, 8:22976 (R;US)
Golder Associates, Inc., Bellevue, WA (USA)
Evaluation of alternative shaft-sinking techniques for high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 3), June 1981-July 1982, 8:23150 (R;US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R;US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R;US)
Relationship of an in-situ test facility to a deep geologic repository for high-level nuclear waste. Final report (Task 4), June 1981-October 1982, 8:23151 (R;US)
Windfield and trajectory models for tornado-propelled objects. Final report, 8:23614 (R;US)
Gould, Inc., Rolling Meadows, IL (USA). Materials Lab.
Studies leading to the development of high-rate lithium-sulfuryl chloride battery technology. Quarterly report No. 3, 1 Apr-30 Jun 82, 8:23668 (R;US)
Government Industrial Research Lab., Osaka (Japan)
Electrode characterization of Li-Al/FeS cells, 8:23674 (R;US)
Grace (W.R.) and Co., Memphis, TN (USA). Agricultural Chemicals Group
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report, 8:22922 (R;US)
Gruy Federal, Inc., Houston, TX (USA)
Offset-Well Testing Program: drilling of Columbia Gas Company wells 10056A and 10056B, Meigs County, Ohio. Eastern Gas Shales Project. Final report, 8:23056 (R;US)

H

Hahn-Meitner-Institut fuer Kernforschung Berlin G.m.b.H. (Germany, F.R.)
Surface segregation in concentrated Ni-Cu alloys under irradiation, 8:23943 (R;US)

Environmental data for sites in the National Solar Data Network, 8:23250 (R;US)
Solar-energy-system performance evaluation. Concord Light Plant municipal garage and office building, Concord, Massachusetts, November 1978-March 1979, 8:23348 (R;US)
Solar-energy-system performance evaluation. Reedy Creek Utility District office building, Lake Buena Vista, Florida, September 1978-February, 1979, 8:23343 (R;US)
Solar-energy-system performance evaluation: Blakedale Professional Center Office Suite, Greenwood, South Carolina, October 1978-March 1979, 8:23342 (R;US)
Solar-energy-system performance evaluation: Colorado Sunworks single-family residence, Longmont, Colorado, November 1978-May 1979, 8:23337 (R;US)
Solar-energy-system performance evaluation: Hullco Construction Company single-family residence, Prescott, Arizona, May 1978-April 1979, 8:23334 (R;US)
Solar-energy-system performance evaluation: Irvine School (El Camino Real Elementary School) Irvine, California, October 1978-March 1979, 8:23344 (R;US)
Solar-energy-system performance evaluation: Northview Elementary School (Howard's Grove) Howard's Grove, Wisconsin, September 1978-April 1979, 8:23346 (R;US)
Solar-energy-system performance evaluation: Page Jackson Elementary School, Charles Town, West Virginia, November 1978-March 1979, 8:23345 (R;US)
Solar-energy-system performance evaluation: Rademaker Corporation office and warehouse building, Louisville, Kentucky, October 1978-March 1979, 8:23340 (R;US)
Solar-energy-system performance evaluation: Scattergood School Recreation Center, West Branch, Iowa, June 1978-April 1979, 8:23339 (R;US)
Solar-energy-system performance evaluation: Terrell D. Moseley office building, Lynchburg, Virginia, October 1978-March 1979, 8:23341 (R;US)
Solar-energy-system-performance evaluation: Perl-Mack Enterprises, Inc., single-family residence, Denver, Colorado, April 1978-March 1979, 8:23332 (R;US)
Thermal performance of space-cooling solar-energy systems in the National Solar Data Network, 8:23328 (R;US)
Thermal-performance analysis of space-heating systems in the National Solar Data Network, 8:23329 (R;US)
International Business Machines Corp., Huntsville, AL (USA). Federal Systems Div.
Environmental data for sites in the National Solar Data Network, 8:23248 (R;US)
Environmental data for sites in the National Solar Data Network, 8:23251 (R;US)
International Centre for Theoretical Physics, Trieste (Italy)
Dirac's large number hypothesis and the red shifts of distant galaxies, 8:24506 (R;XA)
Do neutron stars disprove multiplicative creation in Dirac's large number hypothesis, 8:24505 (R;XA)
Penrose process of energy extraction in electrodyamics, 8:24504 (R;XA)
International Inst. for Applied Systems Analysis, Laxenburg (Austria)
The growth of energy consumption and prices in the USA, FRG, France, and the UK, 1950-1980. Final report, 8:23757 (R;US)
Iowa State Univ. of Science and Technology, Ames (USA). Dept. of Physics
On-line laser spectroscopy with a cooled He-jet transport system, 8:24174 (R;US)
Israel Electric Corp. Ltd., Haifa
Halo-thermal simulation of the Dead Sea, 8:24503 (R;IL)
Istituto Nazionale di Fisica Nucleare, Legnaro (Italy). Lab. Nazionale di Legnaro
New vacuum systems for the 7 MEV CN accelerator of the Legnaro National Laboratory, 8:24145 (R;IT;IT)
Istituto Nazionale di Fisica Nucleare, Milan (Italy)
Comparison between LYRA and SAND code performance for the extrapolation of data from activation detectors used for determining spectra of acceleration neutrons, 8:24203 (R;IT)

J

Jackson (Jerry) and Associates, Marietta, GA (USA)
Development and application of the NPPC commercial-energy-demand model, 8:23694 (R;US)
Japan Atomic Energy Research Inst., Tokai, Ibaraki. Japanese Nuclear Data Committee
Prediction of mass excess, β-decay energy and neutron separation energy from the atomic mass formula with empirical shell terms, 8:24643 (R;JP)
JAYCOR, San Diego, CA (USA)
Thermal-hydraulic code qualification: ATHOS2 and data from Bugey 4 and Tricastin 1. Final report, 8:23499 (R;US)
Jet Propulsion Lab., Pasadena, CA (USA)
Antimisting kerosene atomization and flammability. Interim report, 8:23046 (R;US)
Frictional characteristics and heat transfer of antimisting fuels in tubes. Final report Aug 80-Sep 81, 8:23044 (R;US)
Geothermal probabilistic cost study, 8:23376 (R;US)
Johns Hopkins Univ., Baltimore, MD (USA). Dept. of Biology
Mechanisms of mutagenesis: analysis through the use of alcohol dehydrogenase in Drosophila. Contract summary, May 1978-October 1980, 8:24408 (R;US)
Johns Hopkins Univ., Baltimore, MD (USA). Dept. of Physics
Spectra of germanium and selenium in the 50-350 A region from the PLT tokamak plasma, 8:24770 (R;US)
Johns Hopkins Univ., Baltimore, MD (USA). School of Medicine
The radiographic examination of the colon, 8:24344 (R;US)
Johns Hopkins Univ., Shady Side, MD (USA). Chesapeake Bay Inst.
Biogeochemistry of trace metals in Chesapeake Bay. Final report, April 1, 1981-March 31, 1982, 8:24278 (R;US)
Johnson Controls, Inc., Milwaukee, WI (USA). Globe Battery Div.
Development of unique lightweight high-performance lead-acid batteries, 8:23673 (R;US)
Joint Publications Research Service, Washington, DC (USA)
Effect of radioprotective agents on reactivity to space flight factors, 8:24343 (R;US)
JRB Associates, Inc., McLean, VA (USA)
Operation TUMBLER-SNAPPER 1952. Technical report, 8:24361 (R;US)
Potential human study populations for non-ionizing (radio frequency) radiation health effects, 8:24480 (R;US)

K

Kalamazoo Coll., MI (USA). Dept. of Physics
Spectroscopic properties of the f-elements in compounds and solutions, 8:24078 (R;US)
Kansas State Univ., Manhattan (USA)
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels.

Progress report, February 16, 1982-February 15, 1983, 8:24082 (R;US)
Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Bio- und Geowissenschaften
Investigations on the biological behaviour and the decorporation of ^{234}Th in the rat, 8:24370 (R;DE;In German)
Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Chemie
Investigations on the improvement of activated alumina adsorbents, 8:24060 (R;DE;In German)
Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Maschinenbau
Experimental investigation of the unsteady one-phase flow through perforated plates, 8:23620 (R;DE;In German)
Katholieke Univ. Nijmegen (Netherlands)
Phase transitions in high magnetic fields, 8:23888 (R;US)
Kent Associates, Lake Oswego, OR (USA)
City of North Bonneville, Washington: Geothermal Exploration Project, production test well, Phase II. Final report, 8:23380 (R;US)
Kentucky Natural Resources and Environmental Protection Cabinet, Frankfort (USA)
Comprehensive low-level waste management plan for the state of Kentucky. Fifth quarterly report for the period ending December 31, 1982, 8:23121 (R;US)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Festkoerperforschung
Installation of a positron annihilation apparatus for the investigation of Fermi surfaces, 8:24725 (R;DE;In German)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorentwicklung
Improved program for the determination of neutron efficiency of large Self Powered Neutron Detectors taking into account charge carrier production in the insulator, 8:24204 (R;DE;In German)
Kernforschungsanlage Juelich G.m.b.H. (Germany, F.R.). Programmgruppe Systemforschung und Technologische Entwicklung
Energy technology data handbook. Vol. 1, 8:23423 (R;DE)
Low-temperature heat supply with special consideration to a variety of new technologies, 8:23817 (R;DE;In German)
Plastic solar air heaters of a novel design, 8:23352 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)
Nuclear safety project, 8:23618 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Angewandte Kernphysik 2
Calculating matrix elements of slater determinant wave functions in the cluster model. Pt. 2, 8:24715 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Genetik und Toxikologie von Spaltstoffen
Investigations on the biological behaviour and the decorporation of ^{234}Th in the rat, 8:24370 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik
Experimental investigation of the unsteady one-phase flow through perforated plates, 8:23620 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Radiochemie
Analytical applications of neutron capture gamma-ray spectroscopy, 8:24049 (R;DE)
Investigations on the improvement of activated alumina adsorbents, 8:24060 (R;DE;In German)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Reaktorbauelemente
Thermal and mechanical behaviour of PWR fuel rod simulators for LOCA-experiments, 8:23619 (R;DE)
Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Projekt Nukleare Sicherheit
Thermal and mechanical behaviour of PWR fuel rod simulators for LOCA-experiments, 8:23619 (R;DE)
Knolls Atomic Power Lab., Schenectady, NY (USA)
CONDYN; Polya model secondary electron spectra, 8:24510 (R;US)
KVB, Inc., Irvine, CA (USA)
Measurements of POM emissions from coal-fired utility boilers. Final report, 8:22958 (R;US)
Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.
Release of fission products from irradiated aluminide fuel at high temperature, 8:23604 (R;US)

L

Lane and Edson, P.C., Washington, DC (USA)
Innovative financing for energy-efficiency improvements. Phase II report: model documents and financial projections, 8:23705 (R;US)
Lawrence Berkeley Lab., CA (USA)
ABCRR;ABCRRJ; A+BC classical trajectory study, 8:24512 (R;US)
Computer control of electrochemical experiments with application to zinc/nickel oxide cells, 8:23679 (R;US)
Detectors, sampling, shielding, and electronics for positron emission tomography, 8:24342 (R;US)
Development of ferritic weldments for grain-refined ferritic steels for 4.2K service, 8:23971 (R;US)
DOE2.1A; building energy consumption analysis, 8:23794 (R;US)
Electrode characterization of Li-Al/FeS cells, 8:23674 (R;US)
Lighting-electromagnetic compatibility conference: proceedings, 8:23819 (R;US)
Moessbauer spectrometry study of Fe-Ni-X alloys, 8:23970 (R;US)
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R;US)
Residential demand for energy: a time-series and cross-sectional analysis for eight OECD countries, 8:23818 (R;US)
SOFTWARE TOOLS; program development interface, 8:25258 (R;US)
Spin waves at surfaces and steps in ferromagnets and antiferromagnets, 8:24741 (R;US)
Studies of molecular adsorbates at interfaces by optical second-harmonic generation, 8:24069 (R;US)
Lawrence Livermore National Lab., CA (USA)
Analysis of ambient vibrational motion of MFTF-A vessel/magnet structure, 8:24839 (R;US)
Analytical and experimental evaluation of a proposed self-forging fragment munition, 8:24216 (R;US)
BAGI: a technique for the detection and tracking of large gas clouds, 8:23070 (R;US)
BASIC2 INTERPRETER; minimal basic language, 8:25243 (R;US)
Calculated photon spectra at several angles for 5- and 50-MeV electron beams striking solid and gas targets, 8:24546 (R;US)
CLAP; linear control system design analysis, 8:24100 (R;US)
Comparative behavior of plutonium and americium in the equatorial Pacific, 8:24295 (R;US)
Denser-than-air dispersion modeling in the atmosphere, 8:23071 (R;US)
Design and testing of the TX-4 Type A container for packaging radioactive waste, 8:24114 (R;US)
Effect of a two-dimensional obstacle on the dispersion of a heavier-than-air gas in an atmospheric boundary layer, 8:24243 (R;US)
Effects of copper speciation on aquatic ecosystems, 8:23429 (R;US)
Energy and technology review, 8:24842 (R;US)
Environment and safety: major goals for MARS, 8:24846 (R;US)
First quarterly report of the DARPA dynamic synthesis and consolidation program, 8:24008 (R;US)
Fission-suppressed hybrid reactor: the fusion breeder, 8:24838 (R;US)
Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets, 8:24840 (R;US)
Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets, 8:24841 (R;US)
HEMP; hydrodynamic elasticmagneto plastic flow, 8:24567 (R;US)
High-energy propellant studies: introduction and overview, 8:24215 (R;US)
Human-factors engineering control-room design review/audit report: Byron Generating Station, Commonwealth Edison Company, 8:23567 (R;US)
Human-factors engineering control-room design review/audit: Waterford 3 SES Generating Station, Louisiana Power and Light Company, 8:23568 (R;US)
Implementing affirmative action in conservative times, 8:25232 (R;US)
IMPORTANCE; FTA basic event & cut set ranking, 8:25240 (R;US)
Large-scale hazardous gas release experiments, 8:23069 (R;US)

Laser isotope separation in nuclear-waste by-product utilization, 8:23176 (R;US)
LR; LR(1) grammar analyzer & parser generator, 8:25249 (R;US)
Material properties for TR-55 and silicone elastomeric cushions, 8:24033 (R;US)
NIKE2D: a vectorized, implicit, finite-deformation, finite-element code for analyzing the static and dynamic response of 2-D solids, 8:24143 (R;US)
Nuclear criticality safety experiments, calculations, and analyses: 1958 to 1982. Volume 1. Lookup tables, 8:23544 (R;US)
Nuclear criticality safety experiments, calculations, and analyses - 1958 to 1982. Volume 2. Summaries. Complilation of papers from the Transactions of the American Nuclear Society, 8:23545 (R;US)
Occurrence of biomarkers in Green River shale oil, 8:23086 (R;US)
Particle size for greatest penetration of HEPA filters - and their true efficiency, 8:24244 (R;US)
Physics of laser fusion. Volume IV. The future development of high-power solid-state laser systems, 8:24844 (R;US)
Preliminary investigation of interconnected systems interactions for the safety injection system of Indian Point-3, 8:23638 (R;US)
Quasi-optical ECRH beam system for MFTF-B, 8:24776 (R;US)
QUIKIE: a plotting routine to produce quick and easy graphs. Reference manual, 8:25279 (R;US)
Recent performance improvements on FXR, 8:24189 (R;US)
Shaped-charge penetration in concrete: a unified approach, 8:24218 (R;US)
SLAB: a time-dependent computer model for the dispersion of heavy gases released in the atmosphere, 8:23068 (R;US)
SLIC; interactive graphics 3-d mesh generation, 8:25259 (R;US)
Study of premature explosions in artillery projectiles filled with Composition-B. Final report, 8:24217 (R;US)
Tables of cross references among SECY 82-111, NUREG 0700, NUREG 0835, NUREG 0801, 8:23569 (R;US)
Technical evaluation report on the adequacy of station electric-distribution-system voltages for the Millstone Nuclear Power Station, Units 1 and 2. Docket Nos. 50-245, 50-336, 8:23467 (R;US)
Technical issues related to NUREG 0800, Chapter 18: Human Factors Engineering/Standard Review Plan, 8:23531 (R;US)
TMX upgrade magnet system mechanical issues, 8:24845 (R;US)
Yield determination using long-wavelength black-body radiation from an underground nuclear explosion, 8:24220 (R;US)
ZONE; 2-dimensional finite element mesh generator, 8:25235 (R;US)

Lee-Norse Co., Belle Vernon, PA (USA)
Duty-cycle investigations of continuous miners. Volume I. Final technical report, 8:22974 (R;US)
Duty-cycle investigations of continuous miners. Volume II. Instrument manual, 8:22975 (R;US)

Levy (S.), Inc., Campbell, CA (USA)
NATBWR: a steady-state model for natural circulation in boiling-water reactors, 8:23612 (R;US)

Library of Congress, Washington, DC (USA). Economics Div.
Natural gas revenues of major energy companies, 1977-1981, 8:23064 (R;US)

Little (Arthur D.), Inc., Cambridge, MA (USA)
Roofing asphalts, pitch and UVL carcinogenesis, 8:24453 (R;US)
Steel-mill-residue recycling processes: an energy and economic analysis. Project final report, 8:23857 (R;US)

Los Alamos National Lab., NM (USA)
Active neutron coincidence counting for the assay of MTR fuel elements, 8:23193 (R;US)
Analysis and thermal-design improvements of downhole tools for use in hot-dry wells, 8:23372 (R;US)
BICYCLE; levelized life cycle cost calculation, 8:23404 (R;US)
Buckling investigation of ring-stiffened cylindrical shells with reinforced openings under unsymmetrical axial loads, 8:23551 (R;US)
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R;US)
COMPARE/MOD1A; transient flow with sinks & doors, 8:23468 (R;US)
Computer model of chemistry and dynamics of the mesosphere, thermosphere, and ionosphere, 8:24508 (R;US)
Deflagration-to-detonation transition in PETN and HMX, 8:24211 (R;US)
Detailed petrographic descriptions and microprobe data for drill holes USW-G2 and UE25b-1H, Yucca Mountain, Nevada, 8:24485 (R;US)
Earthquake catalog for northern New Mexico. Progress report, January-March 1982, 8:24489 (R;US)
Flight-systems safety program, September 1982. Progress report, 8:23202 (R;US)
GNASH; particle induced cross-sections & spectra, 8:24671 (R;US)
Guide to MAPPER presentation graphics, 8:25275 (R;US)
INGEN; finite element program mesh generator, 8:25261 (R;US)
Initiation of propagating detonations, 8:24212 (R;US)
Los Alamos Controlled Air Incinerator for radioactive waste. Volume I. Rationale, process, equipment, performance, and recommendations, 8:23147 (R;US)
Los Alamos Meson Physics Facility high-resolution-spectrometer dipole magnets: a summary report, 8:24184 (R;US)
Modeling international steam-coal trade, 8:23007 (R;US)
MOL1D; partial differential equations solution, 8:25253 (R;US)
Multiple-scattering analysis of laser-beam propagation in the atmosphere and through obscurants, 8:24726 (R;US)
Proceedings of the workshop on LAMPF II synchrotron, 8:24183 (R;US)
Proceedings of the workshop on muon science and facilities at Los Alamos, 8:24545 (R;US)
Proceedings of the workshop on nuclear and particle physics at energies up to 31 GeV: new and future aspects, 8:24578 (R;US)
Production and characterization of beta-silicon carbide and alpha-silicon nitride whiskers for ceramic matrix composites, 8:24005 (R;US)
REFLUX; LWR reflood heat transfer prediction, 8:23445 (R;US)
SESAME '83: report on the Los Alamos Equation-of-State Library, 8:23969 (R;US)
SLATEC1.0; mathematical subroutine library, 8:25248 (R;US)
Some analysis techniques and results of the Monte-Carlo simulation of proton and electron tracks, 8:24727 (R;US)
Some nonlinear estimates for lateral propagation of self-generated B fields, 8:24764 (R;US)
Spectroscopic properties of the f-elements in compounds and solutions, 8:24078 (R;US)
STEEP4; thermonuclear reaction rates, 8:24758 (R;US)
Textural analysis of tephra from a rhyodacitic eruption sequence, Thira (Santorini), Greece, 8:24490 (R;US)
TRAC-PD2/MOD1; best-estimate analysis PWR LOCA, 8:23585 (R;US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R;US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R;US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R;US)
Use of the radio-frequency quadrupole structure as a cyclotron axial-buncher system, 8:24168 (R;US)
Vehicle monitors for domestic perimeter safeguards, 8:23192 (R;US)

Louisiana State Univ., Baton Rouge (USA). Nuclear Science Center
DEMONR; unbiased Monte Carlo slab shield code, 8:24716 (R;US)

Louisiana Universities Marine Consortium, Chauvin (USA)
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R;US)

Louisville Univ., KY (USA). Dept. of Biology
Oil persistence in tundra and its impact on the below-ground ecosystem. Final report, 8:23039 (R;US)

Lowell Univ., MA (USA)
Development of retrofitting modifications of textile-loom picking and lay mechanisms for reduction of energy consumption. Final report, 8:23859 (R;US)

M

Martin Marietta Labs., Baltimore, MD (USA)
Studies of photosystem II using artificial donors. Progress report and renewal proposal. MML Proposal No. BI82-414, 8:24340 (R;US)

Maryland Univ., College Park (USA)
Effects of resonances in molecular photoionization measured with triply differential photoelectron spectroscopy, 8:24519 (R;US)

XOQDOQ; nuclear power plant effluent releases, 8:23572 (R;US)

Nuclear Regulatory Commission, Washington, DC (USA). Div. of Safeguards
Safeguards Summary Event List (SSEL), 8:23195 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Div. of Technical Information and Document Control
Regulatory and technical reports, 8:23524 (R;US)
Title list of documents made publicly available, December 1-31, 1982, 8:23525 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Material Safety and Safeguards
Acceptance criteria for determining armed response force size at nuclear power plants, 8:23196 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Reactor Regulation
Safety evaluation report: related to the operation of Seabrook Station, Units 1 and 2, Docket Nos. 50-443 and 50-444, Public Service Company of New Hampshire, et al., 8:23623 (R;US)
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R;US)
Safety Evaluation Report related to the operation of Comanche Peak Steam Electric Station, Units 1 and 2. Docket Nos. 50-445 and 50-446, 8:23622 (R;US)
Safety-evaluation report related to operation of McGuire Nuclear Station, Units 1 and 2. Docket Nos. 50-369 and 50-370, 8:23621 (R;US)
Safety-Evaluation Report related to the construction of the Clinch River Breeder Reactor Plant. Docket No. 50-537, 8:23625 (R;US)
Safety-Evaluation Report related to the construction of the Clinch River Breeder Reactor Plant. Docket No. 50-537, 8:23626 (R;US)
Safety-Evaluation Report related to the D2/D3 steam-generator design modification, 8:23624 (R;US)
Technical specifications: McGuire Nuclear Station, Unit Nos. 1 and 2. Docket Nos. 50-369 and 50-370, 8:23529 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Nuclear Regulatory Research
FRANTIC-NRC; time-dependent system unavailability, 8:25236 (R;US)
Geophysical investigations of the Western Ohio-Indiana region. Annual report, October 1981-September 1982, 8:24492 (R;US)
Standard format and content of license applications, including environmental reports, for in-situ uranium solution mining, 8:23102 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of Resource Management
Licensed operating reactors. Status summary report data as of October 31, 1982, 8:23523 (R;US)
Operating reactors licensing actions summary, 8:23527 (R;US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), February 1-February 28, 1983, 8:23526 (R;US)
Nuclear Regulatory Commission, Washington, DC (USA). Office of State Programs
Information report on state legislation, 8:23149 (R;US)

O

Oak Ridge Associated Universities, Inc., TN (USA)
High spins in gamma-soft nuclei, 8:24704 (R;US)
Radiation-dosimetry and chemical-toxicity considerations for ^{99}Tc, 8:24404 (R;US)
Role of M1 transitions in the quasicontinuum, 8:24672 (R;US)
Towards intrinsically safe light-water reactors, 8:23637 (R;US)
Oak Ridge Gaseous Diffusion Plant, TN (USA)
Gamma-ray spectrometric determination of UF_6 assay with 1 percent precision for international safeguards. Part 1: product and feed in 1S and 2S sample cylinders, 8:23191 (R;US)
Green's function for Onsager's pancake equation, 8:23103 (R;US)
PCTEST; principal component test for outliers, 8:25237 (R;US)
Oak Ridge National Lab., TN (USA)
Anomalous electron-attachment properties of perfluoropropylene (1-C_3F_6) and their effect on the breakdown strength of this gas, 8:24523 (R;US)
Assessment of load-frequency-control impacts caused by small wind turbines, 8:23393 (R;US)
BONAMI-S: response self-shielding by the Bondarenko method. Volume 2. Functional studies, 8:23543 (R;US)
Comparison of solid wastes from coal combustion and pilot coal-gasification plants. Final report, 8:22955 (R;US)
Concentration, serotypic profiles, and infectivity of Legionnaires' Disease bacteria populations in cooling towers, 8:24349 (R;US)
CONSEPT; controller-run solvent extraction, 8:23110 (R;US)
Crack and cavity nucleation at interfaces during creep, 8:23938 (R;US)
CREEP-PLAST2; 2-dimensional inelastic structural analysis, 8:24090 (R;US)
CURT2; curved tubes or elbows & attached pipes, 8:24084 (R;US)
Diffusion of hydrogen in yttrium, 8:23553 (TJ;US)
Electron-attachment processes, 8:24524 (R;US)
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R;US)
GRFPAK; plot package for CORTES FEM programs, 8:24086 (R;US)
MESA; maximum entropy time series analysis, 8:25250 (R;US)
MSF21;VTE21; desalination plant optimization, 8:24088 (R;US)
Ozone impacts on the productivity of selected crops, 8:24403 (R;US)
PICES; utility static generation reliability, 8:23401 (R;US)
PREMOR; two-group point reactor power plant model, 8:23540 (R;US)
PRODCOST; utility generating cost simulation, 8:23403 (R;US)
RATEPAC; power plant revenue requirements code, 8:23405 (R;US)
Release of fission products from irradiated aluminide fuel at high temperature, 8:23604 (R;US)
STOPS; power system short-term optimization, 8:23402 (R;US)
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R;US)
SULCAL; model of sulfur chemistry in a plume, 8:24228 (R;US)
Workshop on cognitive modeling of nuclear-plant control-room operators, 8:23556 (R;US)
Office of Radiation Programs, Las Vegas, NV (USA)
Basic technique and models for determining exposure rates over uranium-bearing soils. Final report, 8:23185 (R;US)
Office of Radiation Programs, Washington, DC (USA)
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R;US)
Ohio State Univ., Columbus (USA)
Oil persistence in tundra and its impact on the below-ground ecosystem. Final report, 8:23039 (R;US)
Okayama Univ. (Japan). Dept. of Industrial and Mechanical Engineering
Laminar natural convection in an inclined rectangular box with the lower surface half heated and half insulated, 8:23350 (R;US)
Old Dominion Univ., Norfolk, VA (USA). Research Foundation
Fate of chlorine in seawater. Final report, August 1, 1977-January 31, 1981, 8:24268 (R;US)
Omaha Public Power District, NE (USA)
Evaluation and demonstration of methods for improved fuel utilization: Fort Calhoun spent-fuel-pool cleanup following a spill of hydraulic fluid containing glycol, 8:23471 (R;US)
Evaluation and demonstration of methods for improved fuel utilization. Sixth semi-annual progress report, April 1, 1982-September 30, 1982, 8:23472 (R;US)
One America, Inc., Washington, DC
ADP requirements study report. Volume 1. ADP requirements statement, 8:25269 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R:US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, VA 22161.

A

A2-1310 RESONANCES
Particle Production
Study of A_3 production in the reaction $\pi^- p \rightarrow K^0 K^- p$ at 50, 100, and 175 GeV/c, 8:24601 (J:US)

ABANDONED SITES
Decommissioning
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R:US)
Decontamination
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R:US)

A-BOMB SURVIVORS
Delayed Radiation Effects
Breast cancer among atomic bomb survivors, Hiroshima and Nagasaki, 1950-1969. Pathologic features, 8:24357 (R:US)
Genetic Radiation Effects
Area program in population genetics. Final report, November 1, 1975-August 31, 1982, 8:24366 (R:US)
Prenatal Exposure
Utilization of critical periods during development to study the effects of low levels of environmental agents, 8:24385 (RA:US)

ABSORBED FRACTION (INTERNAL IRRADIATION)
See INTERNAL IRRADIATION

ABSORBERS (SOLAR)
See SOLAR ABSORBERS

ACCELERATOR FACILITIES
See also TARGET CHAMBERS
Radiation Protection
Some specialized radiological-safety considerations at Argonne National Laboratory's Heavy Ion Research Facility (SAR, Shielding Design, Q.F.'s, HIRC), 8:24175 (R:US)

ACCELERATORS
See also COLLECTIVE ACCELERATORS
HEAVY ION ACCELERATORS
LINEAR ACCELERATORS
MESON FACTORIES
Beam Dynamics
EGUN; calculation of electron trajectories (IBM370,303x,3081; FORTRAN IV (99%) and Assembler (1%)), 8:24167 (R:US)
Specifications
High intensity accelerator facility, 8:24162 (RA:US)

ACCIDENTAL INTAKE
See ACCIDENTS

ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS

ACCIDENTS
See also RADIATION ACCIDENTS
REACTOR ACCIDENTS
Cardiopulmonary Resuscitation
Definitive studies on pole-top resuscitation. Final report, 8:24481 (R:US)

ACES
See QUARKS

ACETYLENE
Combustion
Infrared absorption spectroscopy with color-center lasers. Progress report, April 1 1982-February 15, 1983, 8:24081 (R:US)
Polarons
Polarons in quasi-one-dimensional systems, 8:24024 (J:US)
Vibrational States
Local mode predictions for excited stretching vibrational states of HCCD and H ^{13}C ^{13}CH, 8:24552 (J:US)

ACID ELECTROLYTE FUEL CELLS
Design
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R:US)
Feasibility Studies
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R:US)
Performance Testing
Development of a crude gas/air fuel cell system, 8:23783 (R:DE:In German)

ACID RAIN
Atmospheric Chemistry
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R:US)
Environmental Effects
Summary of observations from the investigation of the sediments of Panther, Sagamore and Woods, 8:24286 (RA:US)
Trace element and polycyclic aromatic hydrocarbon levels in sediment cores from Sagamore and Woods Lakes, 8:24288 (RA:US)

Environmental Impacts
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R:US)
Environmental Transport
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R:US)
Legislation
Analysis of proposed legislation to control acid rain, 8:24255 (R:US)
Mathematical Models
Overview of the integrated lake-water acidification study (ILWAS), 8:24281 (RA:US)
Meetings
Integrated lake-watershed acidification study: proceedings of the ILWAS annual review conference (Lead abstract), 8:24280 (R:US)
Monitoring
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R:US)
Research Programs
Inventory of acid-deposition research projects funded by the private sector. Final report, 8:24237 (R:US)

ACIDIFICATION
Environmental Effects
Allochthonous litter decomposition in three Adirondack lakes, 8:24284 (RA:US)
Lake acidification: its effect on lead mobility in the sediment of two Adirondack lakes, 8:24289 (RA:US)
Seasonal Variations
Lake acidification during spring snowmelt: processes and causes, 8:24285 (RA:US)

ACIDS (ORGANIC)
See ORGANIC ACIDS

ACQUISITION (DATA)
See DATA ACQUISITION

ACTINIDE COMPOUNDS
Electronic Structure
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)
Energy Levels
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)
Excited States
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)

Adsorption
Actinide sorption on rock minerals, 8:23146 (RA:DE)
Chemisorption
Actinide sorption on rock minerals, 8:23146 (RA:DE)
Solubility
Actinide-solubility controls in performance assessment of nuclear-waste repositories, 8:23168 (R:US)

ACTINIUM 215
Yrast States
Spectroscopy of ^{215}Ac and systematics of the N = 126 isotones, 8:24698 (RA:DE:In German)

ACTINIUM 217
Alpha Decay
Perturbed angular distribution in the α-decay; g-factor measurements and spectroscopy of ^{217}Ac, 8:24699 (RA:DE:In German)

ACTIVATED CARBON
Advantages/limitations of solvent extraction, ozonation, and carbon adsorption for reduction of nonbiodegradable residuals in METC fixed-bed gasification wastewaters. Final report, 8:22925 (R:US)
Radiation Heating
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)
Recovery
Zimpro's biophysical-treatment-system stress testing of the H-COAL wastewater, 8:22950 (R:US)
Zimpro's biophysical treatment and wet-air-regeneration-system engineering study for H-COAL wastewater, 8:22951 (R:US)
Regeneration
Zimpro's biophysical-treatment-system stress testing of the H-COAL wastewater, 8:22950 (R:US)
Zimpro's biophysical treatment and wet-air-regeneration-system engineering study for H-COAL wastewater, 8:22951 (R:US)
Thermal Analysis
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)

ACTIVATED SLUDGE PROCESS
Activated-sludge treatment and organic characterization of oil shale retort water, 8:23088 (R:US)
Nutrients
Zimpro's biophysical treatment and wet-air-regeneration-system engineering study for H-COAL wastewater, 8:22951 (R:US)

ACTIVATION DETECTORS
Data Analysis
Comparison between LYRA and SAND code performance for the extrapolation of data from activation detectors used for determining spectra of acceleration neutrons, 8:24203 (R:IT)

ACTIVITY LEVELS
Calibration
Assessment of surrogate structures for whole body counting, 8:24735 (RA:US)
Regression Analysis
Application of a multiple least-squares regression program to dual energy NaI-CsI(T1) measurements, 8:24368 (RA:US)

ATOMIC WEAPONS
See NUCLEAR WEAPONS

ATOM-MOLECULE COLLISIONS
Chemical Reactions
Multichannel distorted wave Born approximation for reactive scattering, 8:24549 (J:US)
Cross Sections
ABCD; atom-triatom nonreactive collisions (CDC7600,CYBER175; FORTRAN IV), 8:24511 (R:US)
ABCRR;ABCRRJ; A+BC classical trajectory study (CDC7600,CYBER175; FORTRAN IV), 8:24512 (R:US)
DWBA
Multichannel distorted wave Born approximation for reactive scattering, 8:24549 (J:US)
S Matrix
VIVAS2; A-BC exact coupled channel scattering (DEC VAX11/780; FORTRAN 77), 8:24513 (R:US)

ATOMS
Affinity
Electron affinities of atoms, molecules, and radicals, 8:24525 (R:US)
Interaction of slow electrons with high-pressure gases ('Quasi-liquids'): synthesis of our knowledge on slow electron-molecule interactions. Progress report, 8:24526 (R:US)
Depth Dose Distributions
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
Electron Attachment
Interaction of slow electrons with high-pressure gases ('Quasi-liquids'): synthesis of our knowledge on slow electron-molecule interactions. Progress report, 8:24526 (R:US)
Energy Levels
Electron affinities of atoms, molecules, and radicals, 8:24525 (R:US)
Range
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)

ATTACHED GREENHOUSES
Performance
Solar-energy-system performance evaluation: Hullco Construction Company single-family residence, Prescott, Arizona, May 1978-April 1979, 8:23334 (R:US)

AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Crack Propagation
Environmental variables and stress corrosion crack propagation rates, 8:23908 (RA:US)
Stress Corrosion
Environmental variables and stress corrosion crack propagation rates, 8:23908 (RA:US)

AUTORADIOGRAPHS
See IMAGES

B

BACILLUS SUBTILIS
Genetic Radiation Effects
Genetics of repair of radiation damage to DNA in bacteria, 8:24381 (RA:US)

BACKFILLING
Materials Testing
Experimental investigation of sodium bentonite stability in Hanford basalt, 8:23174 (R:US)

BACTERIA
See also ESCHERICHIA COLI
Cultivation Techniques
Organisms and compounds of unnatural isotopic composition in NMR, 8:24348 (R:US)
Genetic Radiation Effects
Genetic effects of the decay of radionuclides in cells, 8:24396 (TG:US)
Metabolism
Origins of dissolved organic matter in Southern California coastal waters: experiments on the role of zooplankton, 8:24272 (J:DE)
Population Dynamics
Allochthonous litter decomposition in three Adirondack lakes, 8:24284 (RA:US)
Size
Influence of method on the apparent size distribution of bacterioplankton cells: epifluorescence microscopy compared to scanning electron microscopy, 8:24350 (J:DE)
Volume
Influence of method on the apparent size distribution of bacterioplankton cells: epifluorescence microscopy compared to scanning electron microscopy, 8:24350 (J:DE)
BACTERIOPHAGES
DNA Replication
Correlation of structure and functions of proteins involved in phage T5 DNA replication: an approach to study of mutagenesis, 8:24314 (RA:US)
Genetic Radiation Effects
Genetic effects of the decay of radionuclides in cells, 8:24396 (TG:US)
Mutagenesis
Mechanisms of mutagenesis and DNA repair, 8:24311 (RA:US)
BAER WALLS
See DRUM WALLS
BAG MODEL
Three strange quark system, 8:24614 (RA:US)
BAGHOUSES
Performance
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
Research Programs
Advanced environmental control technology , 8:22952 (R:US)
BAND THEORY
Band model for d- and f-metals, 8:23946 (R:US)
BANKS
See COMMERCIAL BUILDINGS
BARIUM NITRATES
Neutron Diffraction
Temperature dependence of the nuclear positions and spontaneous polarization in pyroelectric $Ba(NO_3)_2xH_2O$, 8:24040 (J:US)
Polarization
Temperature dependence of the nuclear positions and spontaneous polarization in pyroelectric $Ba(NO_3)_2xH_2O$, 8:24040 (J:US)
BARSTOW SOLAR PILOT PLANT
10-MW solar central receiver pilot plant at Barstow, California.
Central Receivers
10-MWe solar-thermal central-receiver pilot plant: receiver cold-flow (Test 1010) and receiver steam-generation (Test 1030) test report, 8:23305 (R:US)
Program Management
Management of the ten-megawatt solar-thermal central-receiver pilot-plant project, 8:23302 (R:US)
Thermal Energy Storage Equipment
Solar Pilot Plant Phase I, detailed design report: thermal storage subsystem research experiment. CDRL Item No. 8 (Approved), 8:23303 (R:US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BARYON RESONANCES
See also DIBARYON RESONANCES
Particle Models
Odd-parity baryons: progress and problems, 8:24609 (RA:US)
Z*Resonances
πN, anti KN, and KN phenomenology, 8:24588 (RA:US)
BASALT
Experimental investigation of sodium bentonite stability in Hanford basalt, 8:23174 (R:US)
Chemical Composition
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
Petrology
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
Sensible Heat Storage
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
Thermal Stresses
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)
Thermodynamic Properties
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
BASIC
BASIC2 INTERPRETER; minimal basic language (MCS-80,8080-based microcomputers; 8080 Assembly language), 8:25243 (R:US)
BATES LINAC MIT
See MIT BATES LINAC
BATTELLE COLUMBUS LABORATORY
Reactor Safety Experiments
Analysis of the BCL transient ECC bypass test with the TRAC-PD2/MOD1 code, 8:23652 (J:US)
BATTELLE PACIFIC NORTHWEST LABORATORIES
Radioactive Waste Processing
Iodine-fixation studies at the Pacific Northwest Laboratory, 8:23165 (R:US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BEAM DUMPS
Design
Design of calorimeter and ion dump for JET neutral injection beam line, 8:25111 (J:US)
BEAM DYNAMICS
EGUN; calculation of electron trajectories (IBM370,303x,3081; FORTRAN IV (99%) and Assembler (1%)), 8:24167 (R:US)
BEAM MONITORS
Cherenkov Radiation
Cherenkov light as a current-density diagnostic for large-area, repetitively pulsed electron beams, 8:24186 (R:US)
BEAM STRIPPERS
Electrostatic Lenses
Terminal lens for an FN tandem, 8:24159 (R:US)
BEAM TRANSPORT
Charge Exchange
Construction of an apparatus for charge exchange, 8:24179 (RA:DE:In German)
Computer Codes
TRANSPORT; design of charged particle beams (IBM370; FORTRAN IV), 8:24165 (R:US)
BEAM-FOIL SPECTROSCOPY
See ION SPECTROSCOPY
BEAM-GAS SPECTROSCOPY
See ION SPECTROSCOPY
BEAM-PLASMA SYSTEMS
Drift Instability
Measurement of growth rate of plasma drift wave excited by slow electrons, 8:24787 (J:US)
Instability Growth Rates
Measurement of growth rate of plasma drift wave excited by slow electrons, 8:24787 (J:US)
BELLOWS
Fatigue
Fatigue testing of TFTR vacuum vessel bellows, 8:25160 (J:US)
BENTONITE
Stability
Experimental investigation of sodium bentonite stability in Hanford basalt, 8:23174 (R:US)

BENZENE
Configuration Interaction
Symmetry simplifications of space types in configuration interaction induced by orbital degeneracy, 8:24563 (J:US)
Neutron Diffraction
Measurements of inelastic scattering of eV neutrons. Final report, 8:24728 (R:US)
Pyrolysis
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels. Progress report, February 16, 1982-February 15, 1983, 8:24082 (R:US)
Solvent Properties
Supercritical gas extraction to separate liquefied coal from residual solids, 8:22927 (R:US)
BENZOPYRENE
Biological Effects
Environmental insults to DNA, 8:24413 (RA:US)
Induction and progression of neoplasia in tracheal epithelium, 8:24443 (RA:US)
Mutagen Screening
Mammalian cell genetic toxicology, 8:24416 (RA:US)
Skin Absorption
Dermal Pathology Program, 8:24446 (RA:US)
Toxicity
Dermal Pathology Program, 8:24446 (RA:US)
BERKELEY SUPERHILAC
See SUPERHILAC
BERYLLIA
See BERYLLIUM OXIDES
BERYLLIUM
Genetic Effects
Regulation of gene expression, 8:24449 (RA:US)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
BERYLLIUM 7
E2-Transitions
Microscopic calculations of the transition probability and E2 form factor of ^{7}Li and ^{7}Be, 8:24646 (RA:DE:In German, English)
BERYLLIUM MODERATORS
See BERYLLIUM
BERYLLIUM OXIDES
Thermal Conductivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Thermal Diffusivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA DECAY RADIOISOTOPES
Q-Value
Prediction of mass excess, β-decay energy and neutron separation energy from the atomic mass formula with empirical shell terms, 8:24643 (R:JP)
BETATRONS
Instability
Orbital stability of the high-current betatron, 8:24190 (J:US)
BIKINI
Radioecology
Comparative behavior of plutonium and americium in the equatorial Pacific, 8:24295 (R:US)
BINARY MIXTURES
Stability
Thermal stability data of amorphous binary alloys, 8:23988 (J:US)
Temperature Effects
Thermal stability data of amorphous binary alloys, 8:23988 (J:US)
BIOCONVERSION
See also ANAEROBIC DIGESTION
1981 Winter Meeting - American Society of Agricultural Engineers, 8:23868 (J:US)
BIOGAS PROCESS
Appropriate technologies for basic energy needs in rural India. Working paper, 8:23759 (R:US)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOMASS
1981 Winter Meeting - American Society of Agricultural Engineers, 8:23868 (J:US)
Gasification
Thermochemical conversion of biomass to synthetic fuels in a large experimental facility. Gasification Research on Wood (GROW) Project, April 1981-March 1982, 8:23270 (R:US)
Liquefaction
Hydrodeoxygenation of phenolic components of wood-derived oil, 8:23279 (R:US)
Program Management
Performance accountability in the biomass energy systems program, 8:23254 (R:US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Operation
Review and evaluation of a bioconversion-process demonstration plant and its related technologies, 8:23874 (R:US)
BIOMASS PLANTATIONS
Environmental Impacts
Physical engineering and environmental aspects of ocean kelp farming. Final report, January 1982-September 1982, 8:23257 (R:US)
Seaweeds
Appendix: ocean engineering aspects of coastal kelp farming, 8:23258 (RA:US)
Physical engineering and environmental aspects of ocean kelp farming. Final report, January 1982-September 1982, 8:23257 (R:US)
Wave Forces
Appendix: ocean engineering aspects of coastal kelp farming, 8:23258 (RA:US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
X-Ray Equipment
Facility for radiographic diagnosis, 8:24346 (P:DE:In German)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Waste Water
Energy recovery from the effluent of plants anaerobically digesting urban solid waste, 8:23876 (R:US)
BIPYRIDINES
Photolysis
Electron-transfer reactions of chlorophyll a and porphyrin triplets with radicals in aqueous micellar solutions, 8:23283 (J:US)
BIRCHES
Contamination
Oil persistence in tundra and its impact on the below-ground ecosystem. Final report, 8:23039 (R:US)
Ecological Concentration
Oil persistence in tundra and its impact on the below-ground ecosystem. Final report, 8:23039 (R:US)
BISMUTH 209 TARGET
Fission
Fission fragment angular correlation in 300 MeV ^{20}Ne induced reactions on heavy targets, 8:24686 (RA:DE:In German, English)
BISMUTH ALLOYS
Melting
Liquid Li-Pb-Bi, a new tritium breeder, 8:24958 (J:US)
BITTER SPAR
See DOLOMITE
BITUMINOUS COAL
Devolatilization
Project study gas, tar and oil production by devolatilization of power station coal, 8:22913 (R:DE:In German)

Microhardness
The effect of oxidation on the microhardness and plastic properties of Guasare coal, 8:22942 (R:MX:In Spanish)
Oxidation
The effect of oxidation on the microhardness and plastic properties of Guasare coal, 8:22942 (R:MX:In Spanish)
Plasticity
The effect of oxidation on the microhardness and plastic properties of Guasare coal, 8:22942 (R:MX:In Spanish)
Pyrolysis
An overview of coal liquefaction, processes with special reference to the pyrolysis of eastern Canadian coals, 8:22907 (RA:CA)
Application of pyrolysis technology to the utilization of eastern Canadian coals, 8:22900 (R:CA)
Coal pyrolysis by hot dolomitic solids from a fluidized bed combustor, 8:22902 (RA:CA)
Results of the IEA pyrolysis project at Bergbau-Forschung, 8:22904 (RA:CA)

BLACK AMERICANS
Fuel Consumption
Residential fuel comparison patterns for poor, black, and elderly households: a comparative study. Vol I. Data base development, 8:23793 (R:US)

BLACK COAL
See also BITUMINOUS COAL
Coal Preparation
Research on the fundamentals of process control in hard coal preparation, 8:22982 (R:DE:In German)

BLACK HOLES
Electrodynamics
Penrose process of energy extraction in electrodyamics, 8:24504 (R:XA)

BLACK SHALES
Bibliographies
Bibliography of Upper Devonian-Shale sequence, 8:23074 (R:US)
Explosive Fracturing
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)
Evaluation of stimulation technologies in the Eastern Gas Shales Project, 8:23073 (R:US)
High-energy gas-fracturing development. Quarterly report, October-December 1982, 8:23077 (R:US)
Flow Models
Modeling of Devonian shale gas reservoirs. Task 16. Mathematical modeling of shale gas production (2D model). Final report, 8:23053 (R:US)
Fracture Properties
Analysis of the Devonian shales in the Appalachian Basin. Volume II. Appendices, 8:23058 (R:US)
Fractures
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Gas Yields
Analysis of the Devonian shales in the Appalachian Basin. Volume II. Appendices, 8:23058 (R:US)
Geochemistry
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Comparative geochemistry of Devonian shale cores from the Appalachian Basin, Mason, Monongalia, and Upshur Counties, West Virginia; Illinois Basin, Tazwell County, Illinois; Clark County, Indiana; and Michigan Basin, Sanilac County, Michigan, 8:23061 (R:US)
Hydraulic Fracturing
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)
Evaluation of stimulation technologies in the Eastern Gas Shales Project, 8:23073 (R:US)
Information Systems
Eastern Gas Shales Project (EGSP) data files: a final report. Open-file report 81-598, 8:23051 (R:US)
Lithology
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Organic Matter
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980 (Formation-density wire logs), 8:23062 (R:US)
Porosity
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Radioactivity
Analysis of the Devonian shales in the Appalachian Basin. Volume II. Appendices, 8:23058 (R:US)
Reservoir Engineering
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Resource Assessment
Eastern Gas Shales Project: increasing US natural gas reserves from eastern gas-bearing shales, 8:23072 (R:US)
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Seismic Surveys
Project to test for shale gas in Ohio. Final report, 8:23054 (R:US)
Stratigraphy
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Analysis of the Devonian shales in the Appalachian Basin. Volume II. Appendices, 8:23058 (R:US)
Offset-Well Testing Program: drilling of Columbia Gas Company wells 10056A and 10056B, Meigs County, Ohio. Eastern Gas Shales Project. Final report, 8:23056 (R:US)
Well Logging
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980 (Formation-density wire logs), 8:23062 (R:US)

BLADES (TURBINES)
See TURBINE BLADES

BLANKETS (BREEDING)
See BREEDING BLANKETS

BLASTING
See EXPLOSIVE FRACTURING

BLEOMYCIN
Toxicity
Systemic toxicology, 8:24442 (RA:US)

BLOOD VESSELS
Biomedical Radiography
Facility for radiographic diagnosis, 8:24346 (P:DE:In German)

BNL
Birds
1982 breeding bird censuses and summary of 1977-1982 results, 8:24266 (R:US)

BOILER FUEL
See BOILER FUELS

BOILER FUELS
Efficiency
Shoreside boiler demonstration of fuel-water emulsions. Final report Mar 80-Aug 82, 8:23047 (R:US)
Fuel Substitution
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)
Shoreside boiler demonstration of fuel-water emulsions. Final report Mar 80-Aug 82, 8:23047 (R:US)

BOILERS
Design
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Economic Analysis
Modeling industrial-boiler retirement economics, 8:23696 (R:US)
Efficiency
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)

Fouling
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Comments on the effect of coal-particle-size consist on furnace ash deposition, 8:22998 (R:US)
Fuel Substitution
Converting small industrial boilers to burn wood fuels. Forest Service research paper (final), 8:24153 (R:US)
Heat Transfer
Heat transfer in slagging MHD radiant boilers, 8:23770 (R:US)
Heaters
Corrosion of superheaters and reheaters in fossil fired boilers, 8:23927 (RA:US)
Materials
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Retrofitting
Fluidized bed retrofit study of CE-VUX type boiler at the Jamestown Board of Public Utilities, Carlson Station, Jamestown, New York, 8:23424 (R:US)
Stress Corrosion
Slow strain rate stress corrosion testing of boiler construction materials in synthetic flue gas at elevated temperatures, 8:23910 (RA:US)
Wood Fuels
Converting small industrial boilers to burn wood fuels. Forest Service research paper (final), 8:24153 (R:US)

BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS

BONES
See SKELETON

BOOM TOWNS
Commercial Sector
Patterns of change in the business community of energy boomtowns, 8:23698 (R:US)
Economic Impact
Overview of boom towns and construction efficiency interactions, 8:23697 (R:US)

BORON
Nuclear Reaction Analysis
Analytical applications of neutron capture gamma-ray spectroscopy, 8:24049 (R:DE)

BORON 11
Spin-Lattice Relaxation
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4 (RE = Gd, Er), 8:23999 (R:US)

BORON ALLOYS
Crystallization
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)
Phase Studies
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)

BOROSILICATE GLASS
Additives
Effect of fining agents on the solarization of a borosilicate glass, 8:23355 (J:US)
Corrosion Resistance
Interaction of vitrified high level waste with clay environment, 8:23141 (RA:DE)
Crystallization
Compared quantitative determination of nuclear waste glass crystallization rate by light microscopy and X-ray diffraction, 8:23132 (RA:DE)
Evaluation
Capacity of the borosilicate glass VG 98/12 for components of the high-level radioactive waste, 8:23130 (RA:DE:In German)
Leaching
Critical review of radiation effects on borosilicate glasses, 8:24004 (RA:DE)
Quality Assurance
Using process instrumentation to obviate destructive examination of canisters of HLW glass, 8:23169 (R:US)
Radiation Effects
Critical review of radiation effects on borosilicate glasses, 8:24004 (RA:DE)
Testing
Effect of fining agents on the solarization of a borosilicate glass, 8:23355 (J:US)

BOROSILICATES
See BOROSILICATE GLASS

BOUNDARY LAYERS
Incompressible Flow
Application of the method of integral relations to the calculation of two-dimensional incompressible turbulent boundary layer, 8:24140 (J:US)
Turbulent Flow
Application of the method of integral relations to the calculation of two-dimensional incompressible turbulent boundary layer, 8:24140 (J:US)

BRAIN
Metabolism
Effects of electromagnetic radiation on calcium in the brain. Technical report, 8:24477 (R:US)

BRASS
See also BRASS-ALPHA
Crack Propagation
Environmental variables and stress corrosion crack propagation rates, 8:23908 (RA:US)
Stress Corrosion
Environmental variables and stress corrosion crack propagation rates, 8:23908 (RA:US)

BRASS-ALPHA
Chemical Composition
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)
Stress Corrosion
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)

BREAKERS (CIRCUIT)
See CIRCUIT BREAKERS

BREAKUP REACTIONS
Computerized Simulation
Monte-Carlo-simulation of particle decay following binary nuclear reactions, 8:24714 (RA:DE:In German, English)

BREASTS
See MAMMARY GLANDS

BREEDING
Fuel breeding only. See also ANIMAL BREEDING and PLANT BREEDING.
Separation Processes
Analysis of the separation of protium from blanket tritium-product streams, 8:24825 (R:US)

BREEDING BLANKETS
Low activation blanket for the moving ring field-reversed mirror reactor, 8:24978 (J:US)
TRACT reactor blanket study (Triggered-reconnection, compact, toroid), 8:24977 (J:US)
Design
Conceptual design of tritium breeding blanket for INTOR, 8:24956 (J:US)
Design of a lithium blanket module for testing in the TFTR, 8:24980 (J:US)
Elmo Bumpy Torus-reactor first wall/blanket shield (FWBS) design, 8:24972 (J:US)
Helium-cooled, solid breeder blanket design for a tokamak fusion reactor, 8:24981 (J:US)
Low tritium inventory, phase change blanket concept for magnetic fusion, 8:24973 (J:US)
Neutronic design for the TFTR lithium blanket module, 8:24975 (J:US)
Neutronic analysis of graphite-moderated solid breeder design for INTOR, 8:24824 (R:US)
Neutronics analysis of graphite-moderated solid breeder blanket designs for INTOR, 8:24957 (J:US)

Nuclear design of Heliotron fusion reactor blankets (II), 8:24974 (J:US)
Preconceptual design of a packed fluidized bed blanket for a fission suppressed thorium-fueled CTHR, 8:24976 (J:US)
Electromagnetic Radiation
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
Heat Transfer
Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets, 8:24841 (R:US)
Materials Testing
Liquid Li-Pb-Bi, a new tritium breeder, 8:24958 (J:US)
Solid oxide compounds - properties necessary for fusion applications, 8:24959 (J:US)
Packed Bed
Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets, 8:24840 (R:US)
Test Facilities
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
The FELIX experimental program and future upgrades, 8:24971 (J:US)
Tritium Recovery
In-situ tritium recovery from Li/sub 17/Pb/sub 83/ breeding blanket, 8:25127 (J:US)

BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION

BRINES
Water Treatment
Improving the injectability of high salinity brine for disposal or waterfloodings operations, 8:23027 (J:US)

BROMIDES
See also POTASSIUM BROMIDES
SODIUM BROMIDES
THORIUM BROMIDES
Isotachophoresis
Isotachophoresis, 8:24050 (R:US)

BROMINE IONS
Ion-Atom Collisions
Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)

BRONCHOGENIC CARCINOMA
See CARCINOMAS

BROOKHAVEN AGS
Antinucleon Beams
Antinucleon time separated beams (TSB), 8:24182 (RA:US)
Proton Beams
Brookhaven: preparing for polarized protons, 8:24170 (J:XC)

BROOKHAVEN NATIONAL LABORATORY

Air Flow
Wind-tunnel research of flowfields within naturally ventilated rooms of simple geometry, 8:23816 (R:US)
Air Pollution Control
Odor control through ventilation: smoking vs. nonsmoking occupancy. Paper 81.22.5, 8:23830 (J:US)
Computer Codes
Continuing development of the DEROB system. Final report, June 1, 1980-November 30, 1982, 8:23804 (R:US)
Computerized Simulation
Thermal network solution of the DEROB program, 8:23805 (RA:US)
Energy Analysis
Analytical developments in interzone and system coupling methodology, 8:23837 (J:US)
Energy Conservation
BECOM-BNL; buildings energy optimization model (CDC7600; PDS), 8:23795 (R:US)
Energy Consumption
Continuing development of the DEROB system. Final report, June 1, 1980-November 30, 1982, 8:23804 (R:US)
DOE2.1A; building energy consumption analysis (CDC7600,6600,CYBER175;IBM370,303x;DEC10,20; FORTRAN (99.9%) and COMPASS (0.1%) for the CDC version. The IBM and DEC versions are all FORTRAN.), 8:23794 (R:US)
Heat Transfer
Heat transfer in building thermal insulation: the thickness effect, 8:23834 (J:US)
Lighting Systems
Theory of the geometric algorithm of the DEROB program, 8:23806 (RA:US)
Solar Heating Systems
Comparative report of solar heating system performance, 8:23349 (J:US)
Space Heating
Heat energy consumption and intermittent heating, 8:23800 (R:DE:In German)
Thermal room models for control analysis, 8:23835 (J:US)
Thermal Insulation
Heat transfer in building thermal insulation: the thickness effect, 8:23834 (J:US)
Ventilation
Odor control through ventilation: smoking vs. nonsmoking occupancy. Paper 81.22.5, 8:23830 (J:US)
Outline of a ventilation computer model for possible incorporation into DEROB, 8:23808 (RA:US)
Tobacco smoke in occupied spaces: ventilation requirements. Paper 81.22.4, 8:23831 (J:US)
Wind data for building ventilation in selected US cities, 8:23828 (R:US)
Wind-tunnel research of flowfields within naturally ventilated rooms of simple geometry, 8:23816 (R:US)

BUILDINGS (CONTAINMENT)
See CONTAINMENT BUILDINGS

BURNABLE POISONS
Performance Testing
Burnable poisons for extended burnup fuel management: present and future (PWR), 8:23492 (RA:US)
Fuel management schemes for PWR extended burnup fuel cycles with gadolinium, 8:23493 (RA:US)

BURNER FUEL OIL
See HEATING OILS

BURNERS
Design
Multi-fuel low-NO/sub x/ burner development, Phase II. Final report Mar 79-Feb 82, 8:24152 (R:US)
Oxy-fuel burner development program. Final report Jul 81-May 82, 8:24154 (R:US)
Nozzles
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)
Performance Testing
Oxy-fuel burner development program. Final report Jul 81-May 82, 8:24154 (R:US)
Wear
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)

BURNUP
Burnup
Operating experience with combustion engineering fuel at high burnups (PWR), 8:23474 (RA:US)
Performance Testing
Operating experience with combustion engineering fuel at high burnups (PWR), 8:23474 (RA:US)
BURST CAN DETECTION
See FAILED ELEMENT DETECTION
BURST REACTORS
See PULSED REACTORS
BURST SLUG DETECTION
See FAILED ELEMENT DETECTION
BUTADIENE
Configuration Interaction
Symmetry simplifications of space types in configuration interaction induced by orbital degeneracy, 8:24563 (J:US)
BWR TYPE REACTORS
See also DRESDEN-2 REACTOR
MILLSTONE-1 REACTOR
Computer Graphics
Development and evaluation of a graphic display system for BWRs, 8:23571 (J:US)
Containment Buildings
Windfield and trajectory models for tornado-propelled objects. Final report, 8:23614 (R:US)
Fuel Assemblies
Design and development of KWU 18 x 18 PWR and 9 x 9 BWR fuel assemblies and their relevance to burnup increase, 8:23459 (RA:US)
Fuel Cans
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
Study of LWR fuel behavior by well characterized tests. Part I. Inpile measurement of cladding diametral deformation with burnup, 8:23454 (RA:US)
Fuel Cycle
Economics of extended burnup from a utility point of view, 8:23532 (RA:US)
Extending BWR burnup with spectral shift control, 8:23535 (RA:US)
Impact of extended burnup on the BWR fuel cycle, 8:23534 (RA:US)
Projected national and world benefits to the LWR fuel cycle from extended burnup, 8:23533 (RA:US)
Fuel Management
Economics of extended burnup from a utility point of view, 8:23532 (RA:US)
Fuel Rods
ASEA-ATOM BWR fuel rod experience at high burnup, 8:23452 (RA:US)
BWR high burnup licensing assessment, 8:23461 (RA:US)
Comparison of COMETHE-IIIJ and FCODE-BETA fission gas-release predictions with measurements. Final report, 8:23466 (R:US)
DOE/GE/NSP extended burnup program, 8:23451 (RA:US)
Economics of extended burnup from a utility point of view, 8:23532 (RA:US)
Evaluation of published high burnup fission gas release data, 8:23456 (RA:US)
Extended burnup fuel investigations in commercial reactors, 8:23449 (RA:US)
Extending BWR burnup with spectral shift control, 8:23535 (RA:US)
Fission gas release from fuel rods irradiated in US commercial light water reactors, 8:23457 (RA:US)
High burnup performance of BN fuels in LWR's, 8:23453 (RA:US)
Impact of extended burnup on the BWR fuel cycle, 8:23534 (RA:US)
Irradiation tests on barrier fuel in support of a large-scale demonstration, 8:23460 (RA:US)
KWU experience and analysis of LWR fuel with respect to high burnup, 8:23450 (RA:US)
LWR extended burnup: fuel performance and utilization, 8:23448 (R:US)
LWR extended burnup: fuel performance and utilization, 8:23458 (R:US)
Projected national and world benefits to the LWR fuel cycle from extended burnup, 8:23533 (RA:US)
Regulatory perspective on extended burnup fuel, 8:23522 (RA:US)
Risoe Fission Gas Project: an overview, 8:23462 (RA:US)
Study of LWR fuel behavior by well characterized tests. Part I. Inpile measurement of cladding diametral deformation with burnup, 8:23454 (RA:US)
Study of LWR fuel behavior by well characterized tests. Part II. Post-irradiation examination and its related analysis of TSURUGA fuel, 8:23455 (RA:US)
Tentative evaluation of consequences of extended burnup on reprocessing of LWR spent fuel, 8:23463 (RA:US)
In-Service Inspection
Nondestructive evaluation program: progress in 1982, 8:23464 (R:US)
Legal Aspects
Operating reactors licensing actions summary, 8:23527 (R:US)
Loss of Coolant
BWR refill-reflood program - TRAC-BWR component development, 8:23609 (R:US)
REFLUX; LWR reflood heat transfer prediction (IBM360; FORTRAN IV), 8:23445 (R:US)
Loss of Flow
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
NATBWR: a steady-state model for natural circulation in boiling-water reactors, 8:23612 (R:US)
Reactor Accidents
A model for predicting containment response to hydrogen burns, 8:23654 (J:US)
Reactor Cooling Systems
Liquid level sensing device, 8:23506 (P:US)
Reactor Decommissioning
Funding nuclear-power-plant decommissioning. Final report, 8:23536 (R:US)
Reactor Licensing
BWR high burnup licensing assessment, 8:23461 (RA:US)
Regulatory licensing status summary report, Nuclear power plants data for decisions (blue book), February 1-February 28, 1983, 8:23526 (R:US)
Reactor Materials
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R:US)
Reactor Operation
Licensed operating reactors. Status summary report data as of October 31, 1982, 8:23523 (R:US)
Operating reactors licensing actions summary, 8:23527 (R:US)
Regulatory perspective on extended burnup fuel, 8:23522 (RA:US)
Reactor Safety
Organization and structure of an EPRI DATATRAN data bank, 8:23613 (R:US)
Selected review and evaluation of US safety research vis-a-vis foreign safety research for nuclear power plants, 8:23636 (R:US)
Reactor Shutdown
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
Scram
Analysis of a partial scram event in a typical BWR/4, 8:23653 (J:US)
Spectral Shift Control
Extending BWR burnup with spectral shift control, 8:23535 (RA:US)
Spent Fuel Elements
Tentative evaluation of consequences of extended burnup on reprocessing of LWR spent fuel, 8:23463 (RA:US)
BYRON-1 REACTOR
Control Rooms
Human-factors engineering control-room design review/audit report: Byron Generating Station, Commonwealth Edison Company, 8:23567 (R:US)

Human Factors Engineering
Human-factors engineering control-room design review/audit report: Byron Generating Station, Commonwealth Edison Company, 8:23567 (R:US)
BYRON-2 REACTOR
Control Rooms

Human-factors engineering control-room design review/audit report: Byron Generating Station, Commonwealth Edison Company, 8:23567 (R:US)

C

CABLES (ELECTRIC)
See ELECTRIC CABLES
CADMIUM
Biological Effects
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Corrosive Effects
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
Ecological Concentration
Accumulation of cadmium and zinc in soil and vegetation from long-term application of wastewater, 8:24475 (J:US)
Cadmium and lead contaminated soils in some British metal mining areas, 8:24260 (J:US)
Environmental pollution control at the AMAX-Homestake lead smelter, 8:24245 (J:US)
Heavy metals in the environs of a smelter, 8:24292 (J:US)
Metabolism
Analytical measurements of selected metals in samples from a human metabolic study, 8:24473 (J:US)
Cadmium-copper interaction: tissue accumulation and subcellular distribution of cadmium in mice after simultaneous administration of cadmium and copper, 8:24471 (J:US)
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
Tissue Distribution
Cardiovascular toxicology, 8:24447 (RA:US)
Toxicity
Cardiovascular toxicology, 8:24447 (RA:US)
Enzyme and gene regulation in Drosophila, 8:24412 (RA:US)
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
CADMIUM CHLORIDES
Toxicity
Systemic toxicology, 8:24442 (RA:US)
CADMIUM COMPOUNDS
See also CADMIUM SULFIDES
Genetic Effects
In vivo cytogenetic effect of some salts of the heavy metals cadmium, chromium, mercury, and platinum in assays of micronuclei and sister chromatid exchange, 8:24411 (R:DE:In German)
CADMIUM SULFIDES
Photolysis
Photochemical, photoelectrochemical and photobiological conversion. Final report, 8:23273 (R:US)
CAES
See COMPRESSED AIR ENERGY STORAGE
CAES PLANT
See COMPRESSED AIR STORAGE POWER PLANTS
CALCIUM
Biological Effects
Effect of phosphorus and calcium on zinc metabolism in man, 8:24461 (J:US)
Effect of dietary lead and calcium on tissue lead accumulation and depletion in sheep, 8:24470 (J:US)
Magnetic Susceptibility
Local susceptibility of ^{63}Ni in palladium, 8:23960 (RA:DE:In German)
Metabolism
Effects of electromagnetic radiation on calcium in the brain. Technical report, 8:24477 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
CALCIUM 40 TARGET
Argon 40 Reactions
Measurement of evaporation residues from the system ^{40}Ar + ^{40}Ca, 8:24663 (RA:DE:In German, English)
Carbon 12 Reactions
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Neon 20 Reactions
Dissociation of ^{20}Ne in collisions with ^{40}Ca at 14.5 MeV/nucleon, 8:24660 (RA:DE:In German, English)
Incomplete momentum transfer in fusion reactions, 8:24662 (RA:DE:In German)
Study of ^{20}Ne + ^{40}Ca at Esub(lab)/A = 14.5 MeV, 8:24661 (RA:DE:In German, English)
Study of inelastic and single-neutron transfer reactions induced by 14.5 MeV/A ^{20}Ne ions on ^{40}Ca, 8:24659 (RA:DE:In German, English)
CALCIUM 48 TARGET
Carbon 12 Reactions
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
CALCIUM COMPOUNDS
See also CALCIUM OXIDES
Deposition
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)
Washout
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)
CALCIUM IONS
Electron-Ion Collisions
Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence, 8:24554 (J:US)
CALCIUM OXIDES
Electronic Structure
XPS study of CaO in sodium silicate glass, 8:24030 (R:US)
Molecular Structure
XPS study of CaO in sodium silicate glass, 8:24030 (R:US)
CALHOUN-1 REACTOR
Fuel Management
Evaluation and demonstration of methods for improved fuel utilization. Sixth semi-annual progress report, April 1, 1982-September 30, 1982, 8:23472 (R:US)
Fuel Pools
Evaluation and demonstration of methods for improved fuel utilization: Fort Calhoun spent-fuel-pool cleanup following a spill of hydraulic fluid containing glycol, 8:23471 (R:US)
Reactor Maintenance
Evaluation and demonstration of methods for improved fuel utilization: Fort Calhoun spent-fuel-pool cleanup following a spill of hydraulic fluid containing glycol, 8:23471 (R:US)
Evaluation and demonstration of methods for improved fuel utilization. Sixth semi-annual progress report, April 1, 1982-September 30, 1982, 8:23472 (R:US)
Reactor Operation
Evaluation and demonstration of methods for improved fuel utilization. Sixth semi-annual progress report, April 1, 1982-September 30, 1982, 8:23472 (R:US)

CALIBRATION STANDARDS
Libraries
Low-energy, photon-emitting nuclides: reference spectra library, 8:24737 (RA:US)
CALIFORNIA
Ground Water
Two-dimensional, steady-state model of ground-water flow, Nevada Test Site and vicinity, Nevada-California, 8:24484 (R:US)
Oil Fields
Naval Petroleum and Oil Shale Reserves. Annual report of operations, 8:23018 (R:US)
Petroleum Industry
Petroleum logistics. Final report and summary, 8:23725 (R:US)
Volcanoes
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
CALIFORNIUM 252
Spontaneous Fission
Measurement of neutron multiplicity distributions with scintillator tank, 8:24198 (RA:DE:In German)
CALORIMETERS
Fabrication
TFTR neutral beam calorimeter fabrication and instrumentation, 8:25215 (J:US)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALVERT CLIFFS-1 REACTOR
Fuel Management
Application of extended burnup: a utility perspective, 8:23478 (RA:US)
Fuel Rods
Application of extended burnup: a utility perspective, 8:23478 (RA:US)
CALVERT CLIFFS-2 REACTOR
Fuel Management
Application of extended burnup: a utility perspective, 8:23478 (RA:US)
Fuel Rods
Application of extended burnup: a utility perspective, 8:23478 (RA:US)
CAMAC SYSTEM
Computer Application to Measurement And Control.
Analog Systems
CAMAC analog signal conditioning module, 8:25197 (J:US)
Design
CAMAC timing and sequencing module, 8:25196 (J:US)
CAMP
See AMP
CANADA
Interconnected Power Systems
US-Canadian electricity trade, 8:23740 (R:US)
Oil Sand Industry
Impact of excessive aromatics in oil-sand syncrudes on production and quality of middle-distillate fuels, 8:23084 (B:CA)
Research Programs
The Canmet research program on coal pyrolysis - application to eastern Canada, 8:22905 (RA:CA)
CANCER
See NEOPLASMS
CANONICAL EQUATIONS
See DIFFERENTIAL EQUATIONS
CAPACITIVE ENERGY STORAGE EQUIPMENT
Electrical Testing
2.0 MVA voltage doubler power supply for capacitor bank charging, 8:25068 (J:US)
CAPSULES
Deformation
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)
Impact Tests
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)
CARBIDES
See also SILICON CARBIDES
TITANIUM CARBIDES
URANIUM CARBIDES
Optical Properties
Optical properties of solids for solar energy conversion, 8:24006 (R:US)
CARBINOL
See METHANOL
CARBON
See also ACTIVATED CARBON
DIAMONDS
GRAPHITE
Antiproton Reactions
Effects of strong attraction in antiproton-nucleus scattering, 8:24621 (RA:US)
Distribution
Method for uniformly distributing carbon flakes in a positive electrode, the electrode made thereby and compositions, 8:23683 (P:US)
Hypernuclei
Supernuclei, supernuclear matter & SU(4) symmetry, 8:24616 (RA:US)
Ion-Atom Collisions
Target-thickness dependence of K-shell vacancy fractions in foil-excited ion beams, 8:24557 (J:US)
Ion-Molecule Collisions
Reactions of ions with atomic and molecular free radicals. Final report, May 1, 1975-November 30, 1982, 8:24522 (R:US)
Leaching
Effects of simulated acid precipitation on carbon and nitrogen mineralization in soil, 8:24256 (RA:US)
Mineralization
Effects of simulated acid precipitation on carbon and nitrogen mineralization in soil, 8:24256 (RA:US)
CARBON 12 REACTIONS
Breakup Reactions
^{12}C and ^{8}Be production in $^{12}C + ^{200}Pb$ collisions, 8:24701 (J:NL)
Elastic Scattering
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Observation of the nuclear rainbow scattering in the $^{12}C + ^{12}C$ system at 300 MeV, 8:24647 (RA:DE:In German)
Heavy Ion Reactions
Global increase of near- and below-barrier fusion for heavier systems, 8:24664 (RA:DE:In German, English)
Inclusive Interactions
Light particle emission from the reaction of ^{12}C with ^{58}Ni and ^{197}Au at 25 MeV per nucleon, 8:24666 (RA:DE:In German, English)
Inelastic Scattering
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Observation of the nuclear rainbow scattering in the $^{12}C + ^{12}C$ system at 300 MeV, 8:24647 (RA:DE:In German)
One-Nucleon Transfer Reactions
Spin orbit interaction of ^{12}C and ^{11}B, 8:24692 (RA:DE:In German)
Total Cross Sections
Energy dependence of the total reaction cross section of the system $^{12}C + ^{12}C$, 8:24648 (RA:DE:In German)
CARBON 12 TARGET
Carbon 12 Reactions
Energy dependence of the total reaction cross section of the system $^{12}C + ^{12}C$, 8:24648 (RA:DE:In German)
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Observation of the nuclear rainbow scattering in the $^{12}C + ^{12}C$ system at 300 MeV, 8:24647 (RA:DE:In German)
Carbon 13 Reactions
Reaction model for the description of spin-flip in the inelastic scattering of $^{12}C + ^{13}C \rightarrow ^{13}C' + ^{12}C^{*}(2^{+})$, 8:24645 (RA:DE:In German, English)

Kaon Plus Reactions
Uncertainty in the K^+-nucleus interaction below 1 GeV, 8:24618 (RA:US)
Neon 20 Reactions
Incomplete momentum transfer in fusion reactions, 8:24662 (RA:DE:In German)
Pion Plus Reactions
Evidence against clusters in ^{13}C nuclei and against the $^1D_2$ 2140 dibaryon resonance, 8:24650 (RA:US)

CARBON 13 REACTIONS
Charge-Exchange Reactions
Search for giant resonance charge exchange modes using the (^{13}C,^{13}N) reaction, 8:24658 (RA:DE:In German, English)
Inelastic Scattering
Reaction model for the description of spin-flip in the inelastic scattering of $^{13}C + {}^{24}Mg \rightarrow {}^{13}C' + {}^{24}Mg^*(2^+)$, 8:24652 (RA:DE:In German, English)
Reaction model for the description of spin-flip in the inelastic scattering of $^{13}C + {}^{12}C \rightarrow {}^{13}C' + {}^{12}C^*(2^+)$, 8:24645 (RA:DE:In German, English)

CARBON DIOXIDE
Consumption Rates
Computer-assisted system for determination of O_2 consumption and CO_2 production in man. Final report, 8:24399 (R:US)
Greenhouse Effect
Carbon dioxide and climate. A bibliography, 8:24233 (R:US)
Photoionization
Effects of resonances in molecular photoionization measured with triply differential photoelectron spectroscopy, 8:24519 (R:US)
Production
Computer-assisted system for determination of O_2 consumption and CO_2 production in man. Final report, 8:24399 (R:US)

CARBON FLUORIDES
Bond Lengths
A $^4\Sigma^-$—X ^{2}Pi transition in CF: A measurement of the term energy and bond length of a fluoromethylidyne metastable, 8:24548 (J:US)
Emission Spectra
A $^4\Sigma^-$—X ^{2}Pi transition in CF: A measurement of the term energy and bond length of a fluoromethylidyne metastable, 8:24548 (J:US)
Radicals
A $^4\Sigma^-$—X ^{2}Pi transition in CF: A measurement of the term energy and bond length of a fluoromethylidyne metastable, 8:24548 (J:US)

CARBON IONS
Ion-Atom Collisions
Semiclassical trajectory effects on C^{6+}-H charge-exchange cross sections at low energy, 8:24556 (J:US)

CARBON MONOXIDE
Atmospheric Circulation
Research in atmospheric chemistry and transport. Final report, 15 Sep 1978-14 Jan 1982, 8:24238 (R:US)
Methanation
Catalysts and relations of selectivity for the Fischer-Tropsch-Synthesis, 8:22915 (R:DE:In German)
Design and modeling of low-pressure-drop methanation reactors, 8:23218 (R:US)
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)
Transmission and backscatter Moessbauer spectroscopy of zeolite Fe (and Fe-Co) synfuel catalysts, 8:24057 (R:US)
Oxidation
Synthetic and catalytic studies directed toward homogeneously catalyzed selective oxidation. Final report, 8:24059 (R:US)
Production
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R:US)
Seasonal Variations
Research in atmospheric chemistry and transport. Final report, 15 Sep 1978-14 Jan 1982, 8:24238 (R:US)

CARBON STEELS
See also STEEL-ASTM-A533-B
Corrosion
Corrosion problems associated with solar fluid and components, 8:23315 (R:US)
Corrosion of superheaters and reheaters in fossil fired boilers, 8:23927 (RA:US)
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R:US)
Corrosion Fatigue
Environmental effects on fatigue crack initiation and early propagation, 8:23907 (RA:US)
Part-through and compact tension corrosion fatigue crack growth behavior of carbon steel in high temperature water (Carbon steel SA 333 grade 6), 8:23902 (RA:US)
Crack Propagation
Environmental effects on fatigue crack initiation and early propagation, 8:23907 (RA:US)
Part-through and compact tension corrosion fatigue crack growth behavior of carbon steel in high temperature water (Carbon steel SA 333 grade 6), 8:23902 (RA:US)
Microstructure
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Oxidation
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Thermal Conductivity
Corrosion of superheaters and reheaters in fossil fired boilers, 8:23927 (RA:US)

CARBONATE ROCKS
See also LIMESTONE
Catagenesis
Deep-burial diagenesis. Annual progress report, 1982-1983, 8:24498 (R:US)
Porosity
Deep-burial diagenesis. Annual progress report, 1982-1983, 8:24498 (R:US)
Recrystallization
Deep-burial diagenesis. Annual progress report, 1982-1983, 8:24498 (R:US)

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Catalytic Effects
Synthetic and catalytic studies directed toward homogeneously catalyzed selective oxidation. Final report, 8:24059 (R:US)
Corrosive Effects
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)
Toxicity
Systemic toxicology, 8:24442 (RA:US)

CARBOXYLASE
Specificity
Protein chemistry and enzyme mechanisms, 8:24320 (RA:US)

CARBOXYLIC ACIDS

Design
Sewage Solids Irradiator Transportation System (SSITS) cask: preliminary design description, 8:24113 (R:US)
Specifications
Sewage Solids Irradiator Transportation System (SSITS) cask: preliminary design description, 8:24113 (R:US)
CAST IRON
Sensible Heat Storage
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
Thermodynamic Properties
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
CATALYSTS
Chemical Composition
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Chemical Preparation
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Chemical Properties
Yield of the oxidation of very rarefied propane/air mixtures in catalytic fluidized beds, 8:24571 (R:DE:In German)
Comparative Evaluations
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Synthesis of liquids and pipeline gas by Fischer-Tropsch (Taconite + K; iron sheathed taconite; taconite + Cu + K), 8:23221 (R:US)
Deactivation
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)
Electronic Structure
SCF-X alpha-SW cluster molecular-orbital models of catalysts, alloys, magnetic materials, and superconductors. Interim report, 8:23891 (R:US)
Performance Testing
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Research Programs
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Specificity
Transportation fuels from indirect coal liquefaction (US DOE; reviews and considers work in other countries), 8:22918 (R:US)
Structural Chemical Analysis
Transmission and backscatter Moessbauer spectroscopy of zeolite Fe (and Fe-Co) synfuel catalysts, 8:24057 (R:US)
CATALYTIC CRACKING
Catalysts
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
CATHODES
Erosion
Arc velocity and erosion for stainless steel and aluminium cathodes, 8:24886 (J:NL)
Study of the erosion rate of vacuum arcs in a transverse magnetic field, 8:24885 (J:NL)
Porous Materials
20 kW-fuel cell units by compact assembly. Pt. 4, 8:23787 (R:DE:In German)
Testing
Testing of water-cooled cathodes on the Westinghouse high surface heat flux test facility, 8:25216 (J:US)
CE ENTRAINED FUEL PROCESS
Bench-Scale Experiments
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
Economic Analysis
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
Mathematical Models
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
Performance
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
Process Development Units
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
CELL FLOW SYSTEMS
Uses
Cytometrics, 8:24450 (RA:US)
High resolution DNA content measurements of mammalian sperm, 8:24327 (J:US)
CELL GROWTH (ANIMAL)
See ANIMAL CELLS
CELL GROWTH (PLANT)
See PLANT CELLS
CELL MEMBRANES
Biological Functions
Studies of membrane structure by freeze-etching. Final report, January 1, 1979-December 31, 1982, 8:24325 (R:US)
Molecular Structure
Studies of membrane structure by freeze-etching. Final report, January 1, 1979-December 31, 1982, 8:24325 (R:US)

CELLULOSE
Enzymatic Hydrolysis
Energy recovery from the effluent of plants anaerobically digesting urban solid waste, 8:23876 (R:US)
CENTRAL HEATING PLANTS
Fuel Consumption
Fuel saving of hot water heating plants by application of heat pumps operated with natural gas (natural gas heat pump), 8:23854 (R:DE:In German)
CENTRAL RECEIVERS
Control
10-MWe solar-thermal central-receiver pilot plant: receiver cold-flow (Test 1010) and receiver steam-generation (Test 1030) test report, 8:23305 (R:US)
Mathematical Models
Thermodynamic model for a central receiver of a solar plant with partial shading of the heliostat field, 8:23300 (R:DE:In German)
Performance Testing
10-MWe solar-thermal central-receiver pilot plant: receiver cold-flow (Test 1010) and receiver steam-generation (Test 1030) test report, 8:23305 (R:US)
CERAMICS
Creep
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
High temperature automated creep testing of ceramic fiber board, 8:24017 (RA:US)

Leaching
Leaching of polyphase nuclear waste ceramics: microstructural and phase characterization, 8:23181 (J:US)
Meetings
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Microstructure
Leaching of polyphase nuclear waste ceramics: microstructural and phase characterization, 8:23181 (J:US)
Physical Radiation Effects
Effects of irradiation on ceramics for fusion-reactor applications, 8:23992 (R:US)

CERIUM
Band Theory
Band model for d- and f-metals, 8:23946 (R:US)
Crystal-Phase Transformations
Photoemission studies of the γ-α phase transition in Ce: Changes in 4f character, 8:23980 (J:US)
Theory of photoemission from metallic Ce, 8:23979 (J:US)
Fermi Level
Band model for d- and f-metals, 8:23946 (R:US)
Photoemission
Photoemission studies of the γ-α phase transition in Ce: Changes in 4f character, 8:23980 (J:US)
Theory of photoemission from metallic Ce, 8:23979 (J:US)

CERIUM 144
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)

CERIUM ALLOYS
Fermi Level
Fermi-surface properties of $CeSn_3$ and related compounds ($LaSn_3$), 8:23947 (R:US)

CERIUM COMPOUNDS
Band Theory
Band model for d- and f-metals, 8:23946 (R:US)
Fermi Level
Band model for d- and f-metals, 8:23946 (R:US)

CERIUM IONS
Nuclear Magnetic Resonance
4f instabilities of isolated Ce ions in elements, 8:23966 (RA:DE:In German, English)
Spin-Lattice Relaxation
4f spin dynamics for isolated mixed valent Ce ions in Th metal, 8:23967 (RA:DE:In German, English)
Concentration and temperature dependence of the 4f spin relaxation of isolated Nd and Ce ions in simple metals, 8:23968 (RA:DE:In German, English)

CERN
Research Programs
Research program at Lear, 8:24591 (RA:US)
Storage Rings
Research program at Lear, 8:24591 (RA:US)

CESIUM
Corrosive Effects
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
Ion-Atom Collisions
Rotationally induced L-shell excitation in energetic Ag + Ag and Ag + Cs collisions, 8:24536 (RA:DE:In German)
Separation Processes
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)

CESIUM 137
Inventories
Byproduct inventories, 8:23171 (R:US)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)

CETACEANS
Ecology
Proceedings of a workshop on cetaceans and sea turtles in the Gulf of Mexico: study planning for effects of Outer Continental Shelf development, 8:23040 (R:US)
Population Dynamics
Existing programs, technology, and requirements relative to the conservation and protection of marine mammals in the US fishery conservation zone and in the southern ocean, 8:24271 (R:US)
Research Programs
Existing programs, technology, and requirements relative to the conservation and protection of marine mammals in the US fishery conservation zone and in the southern ocean, 8:24271 (R:US)

CFFF

Design
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
Engineering
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
Environmental Effects
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Equipment
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Feasibility Studies
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Performance and maintenance in coal conversion synfuels plants, 8:23726 (RA:US)
Fuel Feeding Systems
Coal-feeder development. First quarterly technical progress report, October-December 1980, 8:22924 (R:US)

Industrial Medicine
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Legal Aspects
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Materials
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Materials Testing
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R:US)
Operating Cost
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Operation
Further development on a 170 MW prototype plant with pressurized coal gasification and gas-/steam turbine power plant at Luenen, 8:22912 (R:DE:In German)
Permit Applications
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Pollution Control
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Pressure Tubes
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R:US)
Pressure Vessels
Thermal/strain history effects on creep of refractory concrete, 8:22938 (J:US)
Thermomechanical behavior of refractory concrete linings, 8:22939 (J:US)
Solid Wastes
Comparison of solid wastes from coal combustion and pilot coal-gasification plants. Final report, 8:22955 (R:US)
Taxes
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Technology Assessment
Energy technology data handbook. Vol. 1, 8:23423 (R:DE)
Waste Water
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)

COAL INDUSTRY
Data Compilation
Coal production: 1981, 8:23004 (R:US)
Quarterly coal report, July-September 1982, 8:23005 (R:US)
Energy Accounting
Marginal energy cost of goods and services. Final report, 8:23037 (R:US)
Forecasting
Prospects for future world coal trade (1980-2000), 8:23006 (R:US)
Industrial Medicine
Industrial hygiene comprehensive survey, Cresap test facility, Cresap, West Virginia - a study of coal liquefaction processes. Final report, 8:23011 (R:US)

COAL LIQUEFACTION
See also EXXON LIQUEFACTION PROCESS
FLASH HYDROPYROLYSIS PROCESS
H-COAL PROCESS
SYNTHOIL PROCESS
An overview of coal liquefaction, processes with special reference to the pyrolysis of eastern Canadian coals, 8:22907 (RA:CA)
Liquefaction of Cape Breton coals, 8:22908 (RA:CA)
Catalysts
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Chemical Composition
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Chemical Reactors
Conductivity probe and data acquisition for a liquefaction cold model, 8:22926 (R:US)
Coal Gasification
Optimization of combination of coal hydrogenation, Fischer-Tropach synthesis and gasification for the production of motor fuels, 8:22914 (R:DE:In German)
Comparative Evaluations
Overview of coal liquefaction in the US Department of Energy, 8:22917 (R:US)
Fischer-Tropsch Synthesis
Optimization of combination of coal hydrogenation, Fischer-Tropsch synthesis and gasification for the production of motor fuels, 8:22914 (R:DE:In German)
Health Hazards
Industrial hygiene comprehensive survey. Solvent Refined coal pilot plant, Fort Lewis, Washington - a study of coal liquefaction processes. Final report, 8:24258 (R:US)
Heaters
Proposal for research on heat transfer and hydrodynamics in preheaters for direct coal-liquefaction processes, 8:22928 (R:US)
Oil Yields
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Pilot Plants
Overview of coal liquefaction in the US Department of Energy, 8:22917 (R:US)
Research Programs
Overview of coal liquefaction in the US Department of Energy, 8:22917 (R:US)
Residues
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Technology Assessment
World developments in coal liquefaction processes and how these developments could affect South American coal owning nations, 8:22934 (R:MX)

COAL LIQUEFACTION PLANTS
Corrosion
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Feasibility Studies
Performance and maintenance in coal conversion synfuels plants, 8:23726 (RA:US)
Fuel Slurries
Investigation of pulsation in slurry-pumping systems in coal-liquefaction plants. Final report, 8:22929 (R:US)
Industrial Medicine
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Materials
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Mathematical Models
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Pollution Control
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Technology Assessment
Energy technology data handbook. Vol. 1, 8:23423 (R:DE)
Valves
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Waste Water
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)

COAL LIQUIDS
Calorific Value
Coal liquefaction in SYNTHOIL reactor without added catalyst, 8:22916 (R:US)
Catalytic Cracking
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Chemical Composition
Comparative study of the combustion of alternate liquid fuels (Middle and high boiling SRC-II distillates coal-oil mixtures), 8:22994 (R:US)
Combustion
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
Combustion Properties
Comparative study of the combustion of alternate liquid fuels (Middle and high boiling SRC-II distillates coal-oil mixtures), 8:22994 (R:US)
Density
Coal liquefaction in SYNTHOIL reactor without added catalyst, 8:22916 (R:US)
Hydrocracking
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Hydrogenation
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Physical Properties
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Production
The pyrolysis of Canadian coals for the production of fuels and petrochemicals, 8:22906 (RA:CA)
Refining
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Skin Absorption
Dermal Pathology Program, 8:24446 (RA:US)
Supercritical Gas Extraction
Supercritical gas extraction to separate liquefied coal from residual solids, 8:22927 (R:US)
Toxicity
Dermal Pathology Program, 8:24446 (RA:US)
Systemic toxicology, 8:24442 (RA:US)
Viscosity
Coal liquefaction in SYNTHOIL reactor without added catalyst, 8:22916 (R:US)
COAL MINERS
Training
Toward safer underground coal mines, 8:23009 (R:US)
COAL MINES
Air Pollution Monitors
Development of a methane measuring equipment for several measuring points, 8:23008 (R:DE:In German)
COAL MINING
Dust Collectors
Development of dry-filter dust extractors to reduce dust development during operation of heading machines, 8:24229 (R:DE:In German)
Land Reclamation
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23235 (R:US)
Noise Pollution Abatement
Development of noise-abatement aids in underground mining operations, 8:22970 (R:DE:In German)
Planning
Development and integration of operational planning models for the coal mining industry in the Federal Republic of Germany (short title: Mining planning models), 8:22971 (R:DE:In German)
Safety
The Federal Coal Mine Health program in 1976. Annual report No. 7, 8:23010 (R:US)
Statistics
Coal mining in the West German power industry in 1981, 8:22979 (R:DE:In German)
Underground Mining
Development and integration of operational planning models for the coal mining industry in the Federal Republic of Germany (short title: Mining planning models), 8:22971 (R:DE:In German)
COAL PREPARATION
Evaluation
Coal preparation for synfuels: where do we stand, 8:22983 (R:US)
Heavy Media Separation
Dense-medium cycloning of fine coal at low specific gravities, 8:22987 (R:US)
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Magnetite recovery in coal washing by high-gradient magnetic separation. Quarterly project status report, 13th quarter, 8:22985 (R:US)
Magnetic Separators
Application of HGMS in coal preparation, 8:22986 (R:US)
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Process Control
Research on the fundamentals of process control in hard coal preparation, 8:22982 (R:DE:In German)
Research Programs
Current coal preparation research in the United States, 8:22989 (R:MX)
Solid Wastes
Investigation of the use of coal-waste as raw-material for the production of aluminium, 8:22944 (R:DE:In German)
COAL PREPARATION PLANTS
Automation
Automation of the mud and water circulation process at coal-preparation plant - initial study, 8:22988 (R:PL)
Equipment
World trends in coal preparation, 8:22990 (R:MX)
Mineral Wastes
Upgrading of waste material from coal washeries, 8:22956 (R:MX:In Spanish)
Water Supply
Automation of the mud and water circulation process at coal-preparation plant - initial study, 8:22988 (R:PL)
COAL SEAMS
Degassing
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries (FRG), 8:22977 (R:PL)
Reducing the basic emission of methane by advance drainage, 8:22969 (R:DE:In German)
Stress Relaxation
Pilot working for the prevention of rock bumps in seam Wilhelm/Johann in Colliery Sachsen, 8:22968 (R:DE:In German)
COAL TAR
Toxicity
Roofing asphalts, pitch and UVL carcinogenesis, 8:24453 (R:US)
Systemic toxicology, 8:24442 (RA:US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED MHD GENERATORS
See also MHD GENERATOR CDIF
MHD GENERATOR CFFF
Air Pollution Abatement
Provisional values for the thermodynamic properties of potassium sulfide, 8:23776 (R:US)
Boilers
Heat transfer in slagging MHD radiant boilers, 8:23770 (R:US)

Combustors
COMB; 1-dimensional high-temperature coal combustor model (IBM370; PL/I), 8:23765 (R:US)
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
Diagnostic Techniques
MIE scattering theory for particle sizing interferometry with the dual beam laser velocimeter, 8:23773 (R:US)
MHD Channels
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
Plasma Diagnostics
Evaluation of a modified-line-reversal temperature measurement in coal-fired MHD plasmas, 8:23774 (R:US)
Retrofitting
Performance advantages of a gas-stream MHD retrofit, 8:23772 (R:US)
Slags
COMRC1; slag transport models for MHD systems (IBM360,370,303x; FORTRAN IV), 8:23766 (R:US)
SLGTR; slag transport models for duct surfaces (IBM360,370; FORTRAN IV), 8:23764 (R:US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COALTEK PROCESS

COASTAL REGIONS
Erosion
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)
Meetings
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)

COASTAL WATERS
Organic Compounds
Origins of dissolved organic matter in Southern California coastal waters: experiments on the role of zooplankton, 8:24272 (J:DE)

COATINGS
Surface Properties
Imaging and analysis of surfaces using diffracted electrons, 8:24068 (BA:US)
Thermal Shock
Thermal shock testing of low-Z coatings for JT-60, 8:24906 (J:NL)

COBALT
Catalytic Effects
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

COBALT 57
Moessbauer Effect
Moessbauer investigation of defect trapping at ^{57}Co in coldworked aluminium, 8:23963 (RA:DE:In German)

COBALT 60
Adsorption
Field and laboratory evaluation of the mobility of cobalt-60/EDTA in an arid environment, 8:23167 (R:US)
Mobility
Field and laboratory evaluation of the mobility of cobalt-60/EDTA in an arid environment, 8:23167 (R:US)

COBALT ALLOYS
See also COBALT BASE ALLOYS
Electrochemical Corrosion
Corrosion behavior of high density tungsten alloys, 8:23899 (RA:US)

COBALT BASE ALLOYS
Stress Corrosion
Long time corrosion testing with and without mechanical stress of high temperature alloys for blades of land based gas turbines with high output, 8:23892 (R:DE:In German)

COBALT OXIDES
Self-Diffusion
Diffusion mechanisms in transition-metal oxides, 8:23995 (R:US)
Sorptive Properties
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_3O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)

COBALT SULFATES
Fusion Heat
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
Melting Points
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
Phase Diagrams
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)

COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Air Pollution Abatement
Cogeneration and emission offsets in nonattainment areas, 8:23700 (R:US)
Economics
Chances of continued heat and power generation in public power stations in combination with district heating, 8:23747 (R:DE:In German)

COGENERATION PLANTS

Content of local-energy-management programs, 8:23703 (R:US)
COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Engineering needs of a TRACT fusion reactor program, 8:24952 (J:US)
Breeding Blankets
TRACT reactor blanket study (Triggered-reconnection, compact, toroid), 8:24977 (J:US)
COMPLEX TERRAIN
Drainage
Two-dimensional dynamical drainage-flow model with Monte Carlo transport and diffusion calculations, 8:24234 (R:US)
COMPOSITE MATERIALS
See also SUPERCONDUCTING COMPOSITES
Creep
High temperature automated creep testing of ceramic fiber board, 8:24017 (RA:US)
Flexural Strength
Weathering of sheet molding compounds (Vinyl ester sheet molding compounds), 8:24018 (RA:US)
Kapitza Resistance
Kapitza thermal boundary resistance between two solids, 8:24746 (BA:US)
Meetings
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Tensile Properties
Weathering of sheet molding compounds (Vinyl ester sheet molding compounds), 8:24018 (RA:US)
Thermal Conductivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Thermal Diffusivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Weathering
Weathering of sheet molding compounds (Vinyl ester sheet molding compounds), 8:24018 (RA:US)
COMPOUND NUCLEI
Energy-Level Transitions
GNASH; particle induced cross-sections & spectra (CDC7600; FORTRAN and COMPASS), 8:24671 (R:US)
COMPOUND-NUCLEUS REACTIONS
Computer Codes
GNASH; particle induced cross-sections & spectra (CDC7600; FORTRAN and COMPASS), 8:24671 (R:US)
Cross Sections
GNASH; particle induced cross-sections & spectra (CDC7600; FORTRAN and COMPASS), 8:24671 (R:US)
COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS
COMPRESSED AIR ENERGY STORAGE
Environmental Impacts
Review of environmental studies and issues on compressed-air energy storage, 8:23659 (R:US)
Legal Aspects
Review of environmental studies and issues on compressed-air energy storage, 8:23659 (R:US)
COMPRESSED AIR STORAGE POWER PLANTS
Performance
Thermodynamic analysis of five compressed-air energy-storage cycles, 8:23660 (R:US)
Thermal Energy Storage Equipment
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
Thermodynamic Cycles
Thermodynamic analysis of five compressed-air energy-storage cycles, 8:23660 (R:US)
COMPRESSORS
Design
Fuel saving of hot water heating plants by application of heat pumps operated with natural gas (natural gas heat pump), 8:23854 (R:DE:In German)
COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
A Codes
ABCD; atom-triatom nonreactive collisions (CDC7600,CYBER175; FORTRAN IV), 8:24511 (R:US)
ABCRR;ABCRRJ; A+BC classical trajectory study (CDC7600,CYBER175; FORTRAN IV), 8:24512 (R:US)
ADVCON; advance control 93 APT postprocessor (CDC CYBER174,175; FORTRAN IV), 8:24095 (R:US)
ALVIN; differential-integral data consistency (CDC7600; FORTRAN IV), 8:24639 (R:US)

ANOVA; three factor analysis of variance (CDC6600; FORTRAN IV), 8:25247 (R:US)
ASPEN; advanced system for process engineering (IBM303x;DEC VAX11/780; FORTRAN IV (99%) and Assembly language (1%) for the IBM CMS version. All of ASPEN except easily replaceable system utilities is written in ANS FORTRAN X3.9-1966. THE DEC VAX version is completely FORTRAN IV.), 8:22899 (R:US)
ATM; atmospheric transport & diffusion model (IBM360,370; FORTRAN IV (96%) and BAL (4%)), 8:24227 (R:US)
AXICRP; finite element code for creep analysis (CDC6600,7600,CYBER74; FORTRAN IV), 8:23513 (R:US)
Thermal-hydraulic code qualification: ATHOS2 and data from Bugey 4 and Tricastin 1. Final report, 8:23499 (R:US)

Algorithms

Theory of the geometric algorithm of the DEROB program, 8:23806 (RA:US)

B Codes

BASIC2 INTERPRETER; minimal basic language (MCS-80,8080-based microcomputers; 8080 Assembly language), 8:25243 (R:US)
BEACON/MOD3; containment system fluid flow (CDC CYBER176;CDC7600; FORTRAN IV (98%) and COMPASS (2%)), 8:23579 (R:US)
BECKDRY; dry cooling for steam-electric plants (CDC6600,7600; FORTRAN IV), 8:23398 (R:US)
BECOM-BNL; buildings energy optimization model (CDC7600; PDS), 8:23795 (R:US)
BEHAVE-SST; overpower transient fuel mechanics (CDC7600; FORTRAN IV), 8:23512 (R:US)
BENDPAC; stress analysis of flanged pipe bends (IBM303x,370; FORTRAN IV (93%) and Assembly language (7%)), 8:24099 (R:US)
BICYCLE; levelized life cycle cost calculation (CDC6600,CYBER175; FORTRAN IV), 8:23404 (R:US)
BLOCKS: a block-motion code for geomechanics studies, 8:24493 (R:US)
BONAMI-S: response self-shielding by the Bondarenko method. Volume 2. Functional studies (BONAMI-S code), 8:23543 (R:US)
BXAMER; hustler two-axis lathe APT postprocessor (CDC CYBER174,175; FORTRAN IV (greater than 99%) and COMPASS (less than 1%)), 8:24097 (R:US)

C Codes

CACECO; LMFBR containment accident analysis (CDC CYBER74;CDC7600; CDC FORTRAN Extended with only a few statements that do not comply with the American National Standards Institute (ANSI) FORTRAN.), 8:23511 (R:US)
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)
CHNSED; sediment & containment transport model (IBM360,370; FORTRAN IV (96%) and BAL (4%)), 8:24275 (R:US)
CLAP; linear control system design analysis (Commodore PET with IEEE 488 Bus interface and peripherals; BASIC), 8:24100 (R:US)
COMB; 1-dimensional high-temperature coal combustor model (IBM370; PL/I), 8:23765 (R:US)
COMPARE/MOD1A; transient flow with sinks & doors (CDC7600,CYBER175; FORTRAN IV), 8:23468 (R:US)
COMRC1; slag transport models for MHD systems (IBM360,370,303x; FORTRAN IV), 8:23766 (R:US)
CONDYN; Polya model secondary electron spectra (CDC6600,7600; FORTRAN IV), 8:24510 (R:US)
CONF; conference attendee & speaker data file (CDC6600; COBOL 4.5.), 8:25254 (R:US)
CONSEPT; controller-run solvent extraction (IBM3033,360,370; FORTRAN IV (98%) and BAL (2%)), 8:23110 (R:US)
CONTEMPT4/MOD2; multicompartment containment (CDC7600; FORTRAN IV (96%) and COMPASS (4%)), 8:23584 (R:US)
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)
COVE1; creep collapse for oval fuel pin tube (CDC6600; FORTRAN IV), 8:23555 (R:US)
CRAC calculations for accident sections of environmental statements, 8:23633 (R:US)
CREEP-PLAST2; 2-dimensional inelastic structural analysis (IBM360,370; FORTRAN IV (95%) and BAL (5%)), 8:24090 (R:US)
CURT2; curved tubes or elbows & attached pipes (IBM360,370; FORTRAN IV), 8:24084 (R:US)
Fortran computer-code package for the evaluation of gas-phase viscosities, conductivities, and diffusion coefficients (CHEMKIN), 8:24137 (R:US)

D Codes

2DEPEP; elliptic, parabolic & eigenvalue solutions. (CDC6500,7600; FORTRAN IV), 8:25244 (R:US)
Continuing development of the DEROB system. Final report, June 1, 1980-November 30, 1982, 8:23804 (R:US)
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
DAP; deuterium depth profile in uniform solids (IBM303x; FORTRAN IV), 8:23993 (R:US)
DEMONR; unbiased Monte Carlo slab shield code (IBM360/65; FORTRAN IV), 8:24716 (R:US)
DENDRO; hierarchical cluster analysis of data (IBM360,370; FORTRAN IV (98%) and Assembly language (2%)), 8:25255 (R:US)
DISPL1; 1- and 2-dimensional kinetics-diffusion partial differential equations solution (IBM370/195,303x;CDC7600,6600,CYBER175; MORTRAN2 (80%) and FORTRAN (20%)), 8:24569 (R:US)
DOE2.1A; building energy consumption analysis (CDC7600,6600,CYBER175;IBM370,303x;DEC10,20; FORTRAN (99.9%) and COMPASS (0.1%) for the CDC version. The IBM and DEC versions are all FORTRAN.), 8:23794 (R:US)
DOECTZDATA; California sixteen-zone weather data (IBM360), 8:25223 (R:US)
DOPSEL; self-shielding in the resonance region (IBM370; FORTRAN IV), 8:24702 (R:US)
DPOLE; helmholtz equation on general 3-dimensional region (CDC6600,7600; FORTRAN IV, FTN 4.6+460 compiler), 8:25246 (R:US)
DRIFT; cooling tower drift eliminator analysis (IBM370,303x; FORTRAN IV), 8:23399 (R:US)
DSNP; dynamic simulation nuclear power plants (IBM370; FORTRAN IV and DSNP), 8:23539 (R:US)
DWG100RQ;DWG101RQ; convert to or from SI units (IBM360,370,303x; FORTRAN IV (85%) and COBOL Version 4 (15%)), 8:25245 (R:US)
OCOPTR;DRVOCR; unconstrained optimization (IBM360,370; FORTRAN IV), 8:25233 (R:US)
Preliminary daylighting studies for incorporation into DEROB, 8:23807 (RA:US)
Theory of the geometric algorithm of the DEROB program, 8:23806 (RA:US)
Thermal network solution of the DEROB program, 8:23805 (RA:US)

E Codes

CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)
EGUN; calculation of electron trajectories (IBM370,303x,3081; FORTRAN IV (99%) and Assembler (1%)), 8:24167 (R:US)
ELLIPTIC; elliptic integrals by duplication (NAS AS/6;IBM370 (designed to be machine-independent); FORTRAN IV), 8:25262 (R:US)
EVITS; steady state two-dimensional fluid flow (IBM360,370; FORTRAN IV), 8:24568 (R:US)

F Codes

FASTCAR; solution of Cauchy-Riemann equations (CDC6600,7600;IBM360,370; FORTRAN IV), 8:25251 (R:US)

FCHART/SLR2.0; solar heating system performance (DEC20;DEC VAX11/780; FORTRAN 77), 8:23311 (R:US)

FRANTIC-NRC; time-dependent system unavailability (IBM370; FORTRAN IV), 8:25236 (R:US)

FUELS DATA; model verification fuel rod data (CDC CYBER176,175;CDC7600; FORTRAN IV for the auxiliary edit program, data are recorded as EBCDIC characters.), 8:23446 (R:US)

G Codes

GAPCON-THERMAL3; fuel steady state & transient behavior (CDC6600,7600,CYBER74; CDC Extended FORTRAN IV), 8:23554 (R:US)

Gas-Turbine Evaluation (GATE) Computer Program: thermodynamic cycles, methods, and sample cases. Final report, 8:23417 (R:US)

GASPAR; evaluation of atmospheric releases (IBM370,303x; FORTRAN IV (98%) and Assembly language (2%)), 8:24248 (R:US)

GCFM5.0; geothermal field & power plant costs (IBM370,303x; FORTRAN IV), 8:23378 (R:US)

GEOCITY; geothermal district heating economics (CDC CYBER74;CDC6600,7600; FORTRAN IV), 8:23384 (R:US)

GLOVE CHANGE ANALYSIS SYSTEM; glove data base (IBM360; COBOL with TOTAL DBMS (95%) and Assembler (5%)), 8:24091 (R:US)

GNASH; particle induced cross-sections & spectra (CDC7600; FORTRAN and COMPASS), 8:24671 (R:US)

GRFPAK; plot package for CORTES FEM programs (IBM360,370; FORTRAN IV), 8:24086 (R:US)

H Codes

Generalized heating and cooling load models for seasonal performance calculation, 8:23838 (J:US)

HAARM3; aerosol behavior log-normal dist model (CDC6400,7600,CYBER73; FORTRAN IV, FTN4.5 (CDC7600)), 8:23582 (R:US)

HAUSER5; nuclear reaction cross sections (UNIVAC1100/44; FORTRAN V), 8:24640 (R:US)

HEMP; hydrodynamic elasticmagneto plastic flow (CDC7600; FORTRAN IV, LLL CHAT compiler), 8:24567 (R:US)

I Codes

Documentation of International Energy Evaluation System. Volume 1. Overview, 8:23687 (R:US)

ICOP; financial model industrial cogeneration (CDC CYBER170,175; FORTRAN IV), 8:23406 (R:US)

IMPORTANCE; FTA basic event & cut set ranking (IBM370; FORTRAN IV), 8:25240 (R:US)

INGEN; finite element program mesh generator (CDC7600; FORTRAN IV), 8:25261 (R:US)

IP2D.REV1; resistivity & induced-polarization (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23367 (R:US)

L Codes

Analysis of financial assumptions in selected Energy Information Administration models, 8:23711 (R:US)

L2RMAT; coupled channel inelastic scattering (CDC7600,CYBER175; FORTRAN IV), 8:24747 (R:US)

LADTAP2; liquid pathway dose calculations (IBM360,370,303x;CDC7600,CYBER175; FORTRAN IV), 8:24293 (R:US)

LCLSQ1; linear least squares with constraints (IBM303x,360,370; FORTRAN), 8:25264 (R:US)

LINPACK; simultaneous linear algebraic equations (IBM360,370 (designed to be machine-independent); FORTRAN), 8:25242 (R:US)

LR; LR(1) grammar analyzer & parser generator (IBM370; FORTRAN (ANSI X3.9-1966)), 8:25249 (R:US)

User's Manual for the TVA Lumber Yield and Value File Utility Program. Version 1.0, 8:24356 (R:US)

Libraries

XERROR; Fortran library error-handling package (CDC7600,6600,CYBER175 (designed to be machine-independent); FORTRAN 66 and FORTRAN 77), 8:25263 (R:US)

M Codes

MAEROS user manual (LMFBR), 8:23627 (R:US)

MESA; maximum entropy time series analysis (IBM360,370; FORTRAN IV), 8:25250 (R:US)

MOL1D; partial differential equations solution (CDC6600,7600;Amdahl470;IBM3033; FORTRAN IV), 8:25253 (R:US)

MSF21;VTE21; desalination plant optimization (IBM360,370; FORTRAN (97%) and BAL (3%)), 8:24088 (R:US)

N Codes

Development and application of the NPPC commercial-energy-demand model, 8:23694 (R:US)

NALAP; LMFBR transient response to accident (CDC7600,CYBER76; FORTRAN IV (99%) and COMPASS (1%)), 8:23581 (R:US)

NIKE2D: a vectorized, implicit, finite-deformation, finite-element code for analyzing the static and dynamic response of 2-D solids, 8:24143 (R:US)

NJE; VAX-VMS IBM NJE network protocol emulator (DEC VAX11/780; VAX-11 FORTRAN 77 (99%) and MACRO-11 (1%)), 8:25260 (R:US)

NONSAP-C; nonlinear stress concrete structures (CDC7600; FORTRAN IV (CDC FORTRAN Extended)), 8:24026 (R:US)

NUBOW-2D Inelastic; bowed reactor core analysis (IBM370; FORTRAN IV), 8:23514 (R:US)

O Codes

OCOPTR;DRVOCR; unconstrained optimization (IBM360,370; FORTRAN IV), 8:25233 (R:US)

ODMOD; soil-water trace-containment transport (IBM360,370; FORTRAN IV (97%) and BAL (3%)), 8:24274 (R:US)

OKUMA; OKUMA two-axis lathe APT postprocessor (CDC CYBER174,175; FORTRAN IV (greater than 99%) and COMPASS (less than 1%)), 8:24098 (R:US)

OPTIMIZERS; nonlinear optimization subroutines (IBM360,370; FORTRAN IV), 8:25252 (R:US)

OPTRM; hydrologic transport with optimization (IBM360,370; FORTRAN IV (96%) AND BAL (4%)), 8:24276 (R:US)

P Codes

PCTEST; principal component test for outliers (IBM360,370; FORTRAN IV), 8:25237 (R:US)

PDEONE; solutions of partial differential equations (CDC7600,6600; FORTRAN IV), 8:25239 (R:US)

PELSHIE2; point kernel integration shielding (IBM360,303x; FORTRAN IV (99%) and BAL (1%)), 8:24720 (R:US)

PHOS1; pH & conductivity of sodium phosphate solutions (DEC10; BASIC), 8:24055 (R:US)

PICES; utility static generation reliability (IBM303x,360,370; FORTRAN IV), 8:23401 (R:US)

PLANMAP.REV1; plots geochemical data in plan (UNIVAC1108,1100; FORTRAN V (97%) and Assembly language (3%)), 8:23365 (R:US)

POLUTE; forest air pollutant uptake model (IBM360,370; CSMP), 8:24301 (R:US)

PREMOR; two-group point reactor power plant model (IBM360,370,303x; FORTRAN IV (97%) and Assembler (3%)), 8:23540 (R:US)

PRODCOST; utility generating cost simulation (IBM360,370,303x; FORTRAN IV (97%) and Assembler (3%)), 8:23403 (R:US)

PROMSYS; programmed equipment maintenance (IBM370; ANS COBOL (97%) and Assembly language (3%)), 8:24094 (R:US)

PROSA2; probabilistic response surface studies (IBM370; FORTRAN IV (95%) and Assembly language (5%)), 8:23580 (R:US)

PRPLOT; line printer plot subroutine package (IBM370,360; FORTRAN IV), 8:25238 (R:US)

PTA1; pipe system pressure analysis (IBM370/195; FORTRAN IV), 8:23510 (R:US)

PTTOPT; point-to-point tool APT postprocessor (CDC CYBER174,175; FORTRAN IV), 8:24096 (R:US)

PUBG; purex solvent extraction process model (IBM3033;CDC CYBER175; FORTRAN IV), 8:23111 (R:US)

STEEP4; thermonuclear reaction rates (CDC6600,7600; FORTRAN IV), 8:24758 (R:US)

PH Value

PHOS1; pH & conductivity of sodium phosphate solutions (DEC10; BASIC), 8:24055 (R:US)

Q Codes

QUIKIE: a plotting routine to produce quick and easy graphs. Reference manual, 8:25279 (R:US)

R Codes

Computer control of electrochemical experiments with application to zinc/nickel oxide cells (REAL-TIME and WATCHDOG codes), 8:23679 (R:US)

COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)

Large-area sheet task: advanced dendritic-web-growth development. Annual report, October 23, 1981-October 22, 1982 (RIBBON), 8:23267 (R:US)

RADTRAN II user guide, 8:23117 (R:US)

RANDOM NUMBERS; obtained from U235 alpha decay (IBM370,303x; Binary (random numbers) and FORTRAN IV (AFRAND and Driver)), 8:25256 (R:US)

RATEPAC; power plant revenue requirements code (IBM303x,360,370; FORTRAN IV), 8:23405 (R:US)

REFLUX; LWR reflood heat transfer prediction (IBM360; FORTRAN IV), 8:23445 (R:US)

RO75; reverse osmosis desalting plant design (IBM360,370,303x; FORTRAN IV (92%) and Assembly language (8%)), 8:24093 (R:US)

Research Programs

Continuing development of the DEROB system. Final report, June 1, 1980-November 30, 1982, 8:23804 (R:US)

S Codes

CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)

Generalized heating and cooling load models for seasonal performance calculation, 8:23838 (J:US)

SCHAFF; heat & water transfer in porous media (CDC7600; FORTRAN IV), 8:23362 (R:US)

SECTION.REV1; plot geochemical drill hole data (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23379 (R:US)

SHOCK; dynamic response of lumped-mass systems (CDC6600,7600; FORTRAN IV), 8:24087 (R:US)

SKILLS INVENTORY; personnel information system (CDC6400,7600; FORTRAN IV; package of SKILLS, SKLFORM, AND SEARCH codes), 8:25224 (R:US)

SLAB: a time-dependent computer model for the dispersion of heavy gases released in the atmosphere, 8:23068 (R:US)

SLACKLY; 1-dimensional multicavity klystron tube analysis (IBM360,370; FORTRAN IV), 8:24166 (R:US)

SLATEC1.0; mathematical subroutine library (CRAY1;CDC CYBER175 (designed to be machine-independent); FORTRAN), 8:25248 (R:US)

SLGTR; slag transport models for duct surfaces (IBM360,370; FORTRAN IV), 8:23764 (R:US)

SLIC; interactive graphics 3-d mesh generation (CDC7600; FORTRAN IV (99%) and COMPASS (1%)), 8:25259 (R:US)

SLUMB.REV0; one-dimensional Schlumberger inversion program (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23364 (R:US)

SOERP; second-order error propagation code (IBM360,370;CDC7600; FORTRAN IV), 8:25234 (R:US)

SOFTWARE TOOLS; program development interface (Base version (This version is not tailored to any one machine but serves as a portable base for the user who can add "primitives" or modify the base source to tailor SOFTWARE TOOLS to the local computing environment.); FORTRAN IV and RATFOR), 8:25258 (R:US)

SOLA-DF; transient 2-dimensional 2-phase flow (CDC7600; FORTRAN IV), 8:24136 (R:US)

SOLTES1; thermal energy systems simulation (CDC6600,7600; FORTRAN IV (99%) and COMPASS (1%)), 8:23663 (R:US)

SOMIX1; sodium spray fires in cylindrical cell (IBM370; FORTRAN IV H Extended), 8:23508 (R:US)

SPAR1; shielding with analytic ray-tracing (CDC6600,7600; FORTRAN IV), 8:24719 (R:US)

SPEKEN; Pearson, Spearman & Kendall correlation (IBM360,370; FORTRAN IV), 8:25241 (R:US)

SPXCPL; two-dimensional modeling of self-potential effects (PRIME400;DEC VAX11/780; FORTRAN IV), 8:23366 (R:US)

STESEP; solar total energy system evaluation (CDC6600,7600;IBM370; FORTRAN IV), 8:23297 (R:US)

STOPS; power system short-term optimization (IBM303x,360,370; FORTRAN IV), 8:23402 (R:US)

SULCAL; model of sulfur chemistry in a plume (IBM360,370; FORTRAN IV), 8:24228 (R:US)

SUPAN; analysis of beam-type piping supports (CDC7600; FORTRAN IV), 8:23400 (R:US)

SWAP9; stress-wave analysis in 1-dimensional strain (CDC6600,7600; FORTRAN IV), 8:24092 (R:US)

SWIFT; waste-isolation flow & transport model (CDC7600; FORTRAN IV), 8:23377 (R:US)

SYSREL; reliability analysis of series systems (Honeywell Series 60 Level 66,6000; BASIC), 8:25257 (R:US)

T Codes

CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)

TDIST2; community energy consumption analysis (IBM370,303x; FORTRAN IV, IBM FORTRAN G compiler), 8:23872 (R:US)

TIMEX; 1-dimensional time-dependent multigroups discrete ordinates (IBM360,370;CDC7600; FORTRAN IV), 8:24717 (R:US)

TRAC-PD2/MOD1; best-estimate analysis PWR LOCA (CDC7600; FORTRAN IV (FTN 4.5 FORTRAN compiler) with selected COMPASS replacement routines), 8:23585 (R:US)

TRANSPORT; design of charged particle beams (IBM370; FORTRAN IV), 8:24165 (R:US)

TRITMOD; advection model of tritium dispersion (IBM360; CSMP), 8:24261 (R:US)

TRUMP; transient & steady state temperature distribution (IBM360,370;CDC7600; FORTRAN IV (95%) and BAL (5%) (IBM); FORTRAN IV (CDC)), 8:24135 (R:US)

TVENT; ventilation system transient analysis (CDC7600;IBM360,370; FORTRAN IV), 8:24089 (R:US)

U Codes

UDAD; uranium dispersion & dosimetry model (IBM370,303x; FORTRAN IV (94%), PLL/I (4%), and Assembly language (2%). The only use of PL/I is the auxiliary plotting program, CONTOUR. The only use of Assembly language is the DATE, Gregorian calendar date routine), 8:23187 (R:US)

V Codes

VARR2; CRBRP 2-dimensional transient fluid flow analysis (CDC7600; FORTRAN IV and COMPASS), 8:23509 (R:US)

VIVAS2; A-BC exact coupled channel scattering (DEC VAX11/780; FORTRAN 77), 8:24513 (R:US)

W Codes

Computer control of electrochemical experiments with application to zinc/nickel oxide cells (REAL-TIME and WATCHDOG codes), 8:23679 (R:US)

WHTM; Wisconsin hydrologic transport model (IBM360,370; FORTRAN IV (96%) and Assembler (4%)), 8:24277 (R:US)

X Codes

XERROR; Fortran library error-handling package (CDC7600,6600,CYBER175 (designed to be machine-independent); FORTRAN 66 and FORTRAN 77), 8:25263 (R:US)

XOQDOQ; nuclear power plant effluent releases (IBM370,303x; FORTRAN IV), 8:23572 (R:US)

Z Codes
ZONE; 2-dimensional finite element mesh generator (CDC7600; FORTRAN), 8:25235 (R:US)
COMPUTER GRAPHICS
Guide to MAPPER presentation graphics, 8:25275 (R:US)
SLIC; interactive graphics 3-d mesh generation (CDC7600; FORTRAN IV (99%) and COMPASS (1%)), 8:25259 (R:US)
Computer Codes
QUIKIE: a plotting routine to produce quick and easy graphs. Reference manual, 8:25279 (R:US)
COMPUTER NETWORKS
NJE; VAX-VMS IBM NJE network protocol emulator (DEC VAX11/780; VAX-11 FORTRAN 77 (99%) and MACRO-11 (1%)), 8:25260 (R:US)
Data Acquisition
Hardware developments, 8:25272 (RA:DE:In German)
Data Transmission
IBM NJE protocol emulator for VAX/VMS, 8:25266 (R:US)
COMPUTER PROGRAMMING
See PROGRAMMING
COMPUTER PROGRAMS
See COMPUTER CODES
COMPUTERIZED CONTROL SYSTEMS
Design
System design of ZENKEI, the central control system for JT-60, 8:25177 (J:US)
Optimization
Optimization of sequential control in operation of fusion device, 8:25180 (J:US)
Programming
Software requirements of the central control system computer for the TEXT tokamak, 8:25186 (J:US)
COMPUTERS
Procurement
Costly delays in the purchase of a scientific computer for the Solar Energy Research Institute, 8:25227 (R:US)
CONCENTRATING COLLECTORS
See also TOWER FOCUS COLLECTORS
Bibliographies
Solar thermal energy utilization: a bibliography with abstracts. Quarterly update, April-June 1975, 8:23323 (R:US)
CONCRETES
See also PRESTRESSED CONCRETE
REINFORCED CONCRETE
Creep
Thermal/strain history effects on creep of refractory concrete, 8:22938 (J:US)
Curing
Effect of curing condition on the concrete moisture retention and its shielding implication for the design of fusion facilities, 8:24924 (J:US)
Mechanical Properties
Shaped-charge penetration in concrete: a unified approach, 8:24218 (R:US)
Radiation Effects
FUETAP concrete - an alternative radioactive waste host, 8:23131 (RA:DE)
Temperature Effects
Thermomechanical behavior of refractory concrete linings, 8:22939 (J:US)
Thermal Degradation
FUETAP concrete - an alternative radioactive waste host, 8:23131 (RA:DE)
CONDENSERS
Corrosion
Sulfide attack in steam surface condensers, 8:23896 (RA:US)
CONDUCTIVITY (THERMAL)
See THERMAL CONDUCTIVITY
CONFERENCES
See MEETINGS
CONFIGURATION MIXING
CP Invariance
Perspectives on weak interactions, 8:24579 (RA:US)
CONGENITAL MALFORMATIONS
Pathogenesis
Ebb and flow of manganese: a possible pathogenic factor in birth defects, cancer and heart disease, 8:24457 (J:US)
CONSERVATION (ENERGY)
See ENERGY CONSERVATION
CONSOLES
Human Factors Engineering
Using cognitive modeling to improve the man-machine interface (PWR), 8:23561 (RA:US)
Visual momentum: an example of cognitive models applied to interface design, 8:23560 (RA:US)
CONSTRUCTION
Manpower
Overview of boom towns and construction efficiency interactions, 8:23697 (R:US)
Productivity
Overview of boom towns and construction efficiency interactions, 8:23697 (R:US)
CONSTRUCTIVE FIELD THEORY
Finite Element Method
Finite element approximation in quantum field theory, 8:24633 (J:NL)
CONSULTANTS
Contract Management
Administration of selected support-service contracts, 8:25226 (R:US)
CONTACT RADIOTHERAPY
See RADIOTHERAPY
CONTACTORS
See SWITCHES
CONTAINERS

CASKS
PRESSURE VESSELS
REACTOR VESSELS
TANKS
Design
Design and testing of the TX-4 Type A container for packaging radioactive waste, 8:24114 (R:US)
Testing
Design and testing of the TX-4 Type A container for packaging radioactive waste, 8:24114 (R:US)
CONTAINMENT BUILDINGS
Impact Shock
Windfield and trajectory models for tornado-propelled objects. Final report, 8:23614 (R:US)
Impact Strength
Scale modeling of turbine-missile impact into concrete. Final report (PWR), 8:23611 (R:US)
Windfield and trajectory models for tornado-propelled objects. Final report, 8:23614 (R:US)
Performance Testing
Experimental investigations of long-term interactions of molten UO_2 with MgO and concrete at Argonne National Laboratory (LMFBR), 8:23595 (R:US)
CONTAINMENT SHELLS
Missile Protection
Full-scale turbine-missile concrete impact experiments. Final report, 8:23610 (R:US)
Stress Analysis
Buckling investigation of ring-stiffened cylindrical shells with reinforced openings under unsymmetrical axial loads, 8:23551 (R:US)
CONTAINMENT SYSTEMS
Computerized Simulation
CONTEMPT4/MOD2; multicompartment containment (CDC7600; FORTRAN IV (96%) and COMPASS (4%)), 8:23584 (R:US)
Filters
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)
Test Facilities
Aerosol Behavior Code Validation and Evaluation (ABCOVE) Program: preliminary results of Test AB5 (LMFBR), 8:23617 (R:US)
CONTAMINATION (SURFACE)
See SURFACE CONTAMINATION

CONTINENTAL SHELF
Energy Models
Outer Continental Shelf (OCS) Oil and Gas Supply Model. Volume 3. User's guide and guide to model applications, 8:23013 (R:US)
Natural Gas Deposits
Outer Continental Shelf (OCS) Oil and Gas Supply Model. Volume 3. User's guide and guide to model applications, 8:23013 (R:US)
Petroleum Deposits
Outer Continental Shelf (OCS) Oil and Gas Supply Model. Volume 3. User's guide and guide to model applications, 8:23013 (R:US)
CONTINUOUS MINERS
Data Acquisition Systems
Duty-cycle investigations of continuous miners. Volume I. Final technical report, 8:22974 (R:US)
Information
Duty-cycle investigations of continuous miners. Volume I. Final technical report, 8:22974 (R:US)
Measuring Instruments
Duty-cycle investigations of continuous miners. Volume I. Final technical report, 8:22974 (R:US)
CONTRACT ADMINISTRATION
See CONTRACT MANAGEMENT
CONTRACT MANAGEMENT
Prior to March 1983 this concept was indexed to PROGRAM MANAGEMENT.
Evaluation
Administration of selected support-service contracts, 8:25226 (R:US)
CONTRACTOR PERSONNEL
Accountability
Five-megawatt geothermal-power pilot-plant project, 8:23375 (R:US)
Management
Project management in the oil shale program, 8:23078 (R:US)
Performance
Performance accountability in the biomass energy systems program, 8:23254 (R:US)
CONTRACTS
See also FIXED-PRICE CONTRACTS
Cost Overruns
Administration of selected support-service contracts, 8:25226 (R:US)
Program Management
Alleged improprieties concerning the settlement of overcharge violations against the Tauber Oil Company, 8:23043 (R:US)
CONTROL (RADIOACTIVITY)
See RADIATION MONITORING
CONTROL ROOMS
Alarm Systems
Automatic diagnosis of multiple alarms for reactor control rooms, 8:23639 (J:US)
Human Factors Engineering
Tables of cross references among SECY 82-111, NUREG 0700, NUREG 0835, NUREG 0801, 8:23569 (R:US)
Technical issues related to NUREG 0800, Chapter 18: Human Factors Engineering/Standard Review Plan, 8:23531 (R:US)
Reactor Control Systems
Automatic diagnosis of multiple alarms for reactor control rooms, 8:23639 (J:US)
CONTROL SYSTEMS
For automated processes including feedback.
See also COMPUTERIZED CONTROL SYSTEMS
REACTOR CONTROL SYSTEMS
CLAP; linear control system design analysis (Commodore PET with IEEE 488 Bus interface and peripherals; BASIC), 8:24100 (R:US)
Design
Design concept of real-time plasma control for JT-60, 8:25179 (J:US)
Feedback
Experimental study on feedback control system of plasma position, 8:25181 (J:US)
CONTROL THEORY (REACTOR)
See REACTOR KINETICS
CONVEYORS
Surface Coating
Development of noise-abatement aids in underground mining operations, 8:22970 (R:DE:In German)
COOLANTS
See also specific coolant materials.
Mixing
Three-dimensional modeling of thermal and fluid mixing in PWRs during high-pressure coolant injection, 8:23640 (J:US)
COOLERS
See HEAT EXCHANGERS
COOLING LOAD
Computer Codes
DOE2.1A; building energy consumption analysis (CDC7600,6600,CYBER175;IBM370,303x;DEC10,20; FORTRAN (99.9%) and COMPASS (0.1%) for the CDC version. The IBM and DEC versions are all FORTRAN.), 8:23794 (R:US)
COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS
COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
THERMONUCLEAR REACTOR COOLING SYSTEMS
Environmental Effects
Review of the effects of the Clean Water Act on cooling-system selection by the steam-electric industry, 8:23427 (R:US)
Intake Structures
Advanced intake technology for cooling-water intakes: current status and future direction, 8:23409 (R:US)
Performance
Review of the effects of the Clean Water Act on cooling-system selection by the steam-electric industry, 8:23427 (R:US)
COOLING TOWER PACKING GRIDS
See PACKINGS
COOLING TOWERS
Bacteria
Concentration, serotypic profiles, and infectivity of Legionnaires' Disease bacteria populations in cooling towers, 8:24349 (R:US)
Computerized Simulation
DRIFT; cooling tower drift eliminator analysis (IBM370,303x; FORTRAN IV), 8:23399 (R:US)
Optimization
BECKDRY; dry cooling for steam-electric plants (CDC6600,7600; FORTRAN IV), 8:23398 (R:US)
COOLING WATER CHEMICAL TREATMENT
See WATER CHEMISTRY
COPAIBA
See COPAIFERA
COPAIFERA
Plant Breeding
New sources for fuel and materials, 8:23282 (J:US)
COPPER
Antiproton Reactions
Effects of strong attraction in antiproton-nucleus scattering, 8:24621 (RA:US)
Biological Effects
Cadmium-copper interaction: tissue accumulation and subcellular distribution of cadmium in mice after simultaneous administration of cadmium and copper, 8:24471 (J:US)
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Serum copper, follicular stimulating hormone, luteinizing hormone, prolactin, spermatic count, viability, progression and seminal zinc correlations in a human (male) infertility study, 8:24472 (J:US)
Corrosion
Corrosion problems associated with solar fluid and components, 8:23315 (R:US)
Corrosion Fatigue
Environmental effects on fatigue crack initiation and early propagation, 8:23907 (RA:US)

Corrosion Protection
Surface enhanced Raman scattering in corrosion science: benzotriazole on copper, 8:23987 (J:US)
Crack Propagation
Environmental effects on fatigue crack initiation and early propagation, 8:23907 (RA:US)
Displacement Rates
Molecular-dynamics simulation of displacement cascades in Cu: analysis of replacement sequences, 8:23934 (R:US)
Ecological Concentration
Environmental pollution control at the AMAX-Homestake lead smelter, 8:24245 (J:US)
Heavy metals in the environs of a smelter, 8:24292 (J:US)
Electric Conductivity
Temperature dependence of electrical resistivity of vanadium, platinum and copper, 8:23978 (J:US)
Electron Diffraction
Chemisorption of oxygen on Cu(110) studied by eels and leed, 8:24744 (J:NL)
Fermi Level
Installation of a positron annihilation apparatus for the investigation of Fermi surfaces, 8:24725 (R:DE:In German)
Mechanical Properties
Surface segregation in binary alloy first wall candidate materials, 8:24904 (J:NL)
Metabolism
Analytical measurements of selected metals in samples from a human metabolic study, 8:24473 (J:US)
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Serum copper, follicular stimulating hormone, luteinizing hormone, prolactin, spermatic count, viability, progression and seminal zinc correlations in a human (male) infertility study, 8:24472 (J:US)
Physical Radiation Effects
Molecular-dynamics simulation of displacement cascades in Cu: analysis of replacement sequences, 8:23934 (R:US)
Re-examination of the threshold energy surface in copper, 8:23935 (R:US)
Threshold energy surface and Frenkel-pair resistivity for Cu, 8:23948 (R:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Sorptive Properties
Chemisorption of oxygen on Cu(110) studied by eels and leed, 8:24744 (J:NL)
Superconductivity
Specific heat of in situ superconducting composites, 8:23973 (J:US)
Surface Properties
Normal photoelectron diffraction of O/Cu(001): A surface-structural determination, 8:23981 (J:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Corrosion
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
Sea water corrosion of two-phase Cu-10Ni-8Sn, 8:23897 (RA:US)
Sulfide attack in steam surface condensers, 8:23896 (RA:US)
Physical Radiation Effects
Radiation damage in amorphous CuZr-alloys, 8:23965 (RA:DE:In German)
Surface segregation in concentrated Ni-Cu alloys under irradiation (Ni-10Cu; Ni-60Cu), 8:23943 (R:US)
Superconductivity
Specific heat of in situ superconducting composites, 8:23973 (J:US)

COPPER BASE ALLOYS
See also BRASS
Physical Radiation Effects
Surface segregation in concentrated Ni-Cu alloys under irradiation (Ni-10Cu; Ni-60Cu), 8:23943 (R:US)
Sputtering
Ion-bombardment-induced subsurface composition modifications in alloys at elevated temperatures (Cu - 40 at. % Ni), 8:23932 (R:US)

COPPER IODIDES
Crystal-Phase Transformations
Molecular dynamics studies of superionic conductors, 8:24031 (R:US)
Ionic Conductivity
Molecular dynamics studies of superionic conductors, 8:24031 (R:US)

COPPER IONS
Ecological Concentration
Effects of copper speciation on aquatic ecosystems, 8:23429 (R:US)
Toxicity
Effects of copper speciation on aquatic ecosystems, 8:23429 (R:US)

COPPER ORES
Solution Mining
In-place leaching of uranium, copper, and evaporites, 8:23101 (R:US)

COPPER OXIDES
Chemical Reactions
Simultaneous removal of SO_3 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Regeneration
Simultaneous removal of SO_3 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Sorptive Properties
Simultaneous removal of SO_3 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for fuel-cell program, 8:23782 (R:US)
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for the fuel-cell program, 8:23781 (R:US)

CORE BARREL

DESALINATION PLANTS
Optimization
MSF21;VTE21; desalination plant optimization (IBM360,370; FORTRAN (97%) and BAL (3%)), 8:24088 (R:US)
RO75; reverse osmosis desalting plant design (IBM360,370,303x; FORTRAN IV (92%) and Assembly language (8%)), 8:24093 (R:US)
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Catalysts
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Electron Beams
DOE's electron-beam-irradiation development program (Avco/EBARA (E-beam/ammonia) Process; Research-Cottrell (E-beam/lime slurry) process), 8:22954 (R:US)
Information Systems
Flue gas desulfurization information system data base user's manual, 8:24241 (R:US)
DETECTION (FAILED ELEMENT)
See FAILED ELEMENT DETECTION
DETECTION (NUCLEAR EXPLOSIONS)
See NUCLEAR EXPLOSION DETECTION
DETECTION (SEISMIC)
See SEISMIC DETECTION
DETONATORS
Testing
Velocity perturbation of a flyer approaching a rigid impermeable barrier and the transmitted pressure pulse, 8:24214 (R:US)
DEUTERIUM
Atom-Molecule Collisions
Applications of classical trajectory techniques to reactive scattering, 8:24566 (J:US)
Isotope Effects
NMR study of phase transitions in VT/sub 0.50/ and VT/sub 0.75/, 8:24010 (J:US)
Small-angle neutron scattering studies of a compatible polymer blend, atactic polystyrene-poly(2,6 dimethyl phenylene oxide), 8:24073 (J:GB)
Microanalysis
DAP; deuterium depth profile in uniform solids (IBM303x; FORTRAN IV), 8:23993 (R:US)
Trapping
Deuterium trapping in low-Z coatings, 8:24898 (J:NL)
DEUTERIUM COMPOUNDS
Photoelectron Spectroscopy
Laser photoelectron spectroscopy of ions. Progress report, August 1, 1982-July 31, 1983, 8:24527 (R:US)
DEUTERIUM HYDRIDE
See HYDROGEN DEUTERIDE
DEUTERIUM IONS
Ion-Molecule Collisions
Reactions of ions with atomic and molecular free radicals. Final report, May 1, 1975-November 30, 1982, 8:24522 (R:US)
DEUTERIUM OXIDES
See HEAVY WATER
DEUTERIUM-LITHIUM HIGH FLUX NEUTRON SOURC
See NEUTRON SOURCE FACILITIES
DEVELOPED COUNTRIES
Economic Analysis
Energy security in the industrial nations, 8:23723 (R:US)
Energy Policy
Energy security in the industrial nations, 8:23723 (R:US)
DEVICES
See EQUIPMENT
DEVONIAN SHALES

DIAL PAINTERS
Biological Radiation Effects
Radium dial workers, 8:24364 (R:US)
DIALYSIS
Side Effects
Release of zinc from disposable coils during hemodialysis, 8:24345 (J:US)
DIAMOND DRILLING EQUIPMENT
See DRILLING EQUIPMENT
DIAMONDS
Electron Channeling
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
Positron Channeling
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
Surface Properties
Imaging and analysis of surfaces using diffracted electrons, 8:24068 (BA:US)
DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS
DIATOMS
Population Dynamics
Temporal trends in the pH of Woods, Sagamore, and Panther Lakes as determined by an analysis of diatom population, 8:24287 (RA:US)
DIBARYON RESONANCES
Mathematical Models
I=1 dibaryons - theoretical, 8:24610 (RA:US)
Particle Production
Experimental evidence for dibaryons, 8:24589 (RA:US)
DIELECTRIC MATERIALS
Kapitza Resistance
Kapitza thermal boundary resistance between two solids, 8:24746 (BA:US)
DIELECTRIC TRACK DETECTORS
Calibration
Solid state nuclear track detectors (SSNTD), 8:24201 (RA:DE:In German)
DIELECTRICS
See DIELECTRIC MATERIALS
DIESEL ENGINES
Ethanol Fuels
Effect of low-proof alcohol utilization to supplement diesel fuel on engines life expectancy: Caterpillar 3306 PCI. Final report, 8:23880 (R:US)
Effect of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: International Harvester D436. Final report, 8:23881 (R:US)
Effects of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: John Deere 6466T. Final report, 8:23879 (R:US)
Exhaust Gases
Mutagenicity of diesel exhaust particle extracts: influence of driving cycle and environmental temperature, 8:24456 (J:US)
Fuel Substitution
Microemulsions from vegetable oil and aqueous alcohol with 1-butanol surfactant as alternative fuel for diesel engines, 8:23239 (P:US)
Performance
Effect of low-proof alcohol utilization to supplement diesel fuel on engines life expectancy: Caterpillar 3306 PCI. Final report, 8:23880 (R:US)
Effect of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: International Harvester D436. Final report, 8:23881 (R:US)
Effects of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: John Deere 6466T. Final report, 8:23879 (R:US)
Wear
Effect of low-proof alcohol utilization to supplement diesel fuel on engines life expectancy: Caterpillar 3306 PCI. Final report, 8:23880 (R:US)
Effect of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: International Harvester D436. Final report, 8:23881 (R:US)

Effects of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: John Deere 6466T. Final report, 8:23879 (R:US)

DIESEL FUELS

Chemical Properties

Impact of excessive aromatics in oil-sand syncrudes on production and quality of middle-distillate fuels, 8:23084 (B:CA)

Fuel Additives

Effect of low-proof alcohol utilization to supplement diesel fuel on engines life expectancy: Caterpillar 3306 PCI. Final report, 8:23880 (R:US)

Effect of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: International Harvester D436. Final report, 8:23881 (R:US)

Effects of low-proof alcohol utilization to supplement diesel fuel on engine life expectancy: John Deere 6466T. Final report, 8:23879 (R:US)

Fuel Supplies

Transportation energy contingency planning: transit fuel supplies under decontrol, 8:23715 (R:US)

Physical Properties

Impact of excessive aromatics in oil-sand syncrudes on production and quality of middle-distillate fuels, 8:23084 (B:CA)

Toxicity

Inhalation toxicology, 8:24445 (RA:US)

DIESEL OIL (FRACTION)

See DIESEL FUELS

DIFFERENTIAL EQUATIONS

See also PARTIAL DIFFERENTIAL EQUATIONS

Extrapolation

Efficient extrapolation methods for ODEs, 8:25277 (R:US)

DIFFRACTION (NEUTRON)

See NEUTRON DIFFRACTION

DIFFRACTION (X-RAY)

See X-RAY DIFFRACTION

DIFFUSION

Mathematical Models

Two-dimensional dynamical drainage-flow model with Monte Carlo transport and diffusion calculations, 8:24234 (R:US)

Numerical Solution

Chemical diffusion in a one dimensional lattice with two sites inequivalent, 8:24045 (J:GB)

DIFFUSION WELDING

Technology Assessment

Possibilities of welding as a joining process in airframe construction, 8:24130 (TJ:US)

DIGITALIS GLYCOSIDES

Biological Effects

Zinc and magnesium concentrations in plasma and red blood cells in patients on digitalis medication, 8:24462 (J:US)

DIMETHYLBENZANTHRACENE

Biological Effects

Induction and progression of neoplasia in tracheal epithelium, 8:24443 (RA:US)

Normal and neoplastic growth in epithelial cells, 8:24444 (RA:US)

Toxicity

Cytometrics, 8:24450 (RA:US)

DIOLS

See GLYCOLS

DIPOLES

Detection

Locating a buried magnetic dipole, 8:24155 (J:US)

DIRAC COSMOLOGY

Gravitation

Dirac's large number hypothesis and the red shifts of distant galaxies, 8:24506 (R:XA)

Reliability

Do neutron stars disprove multiplicative creation in Dirac's large number hypothesis, 8:24505 (R:XA)

DIRECT ENERGY CONVERTERS

See also MHD GENERATORS
THERMIONIC CONVERTERS
THERMOELECTRIC GENERATORS
THERMOPHOTOVOLTAIC CONVERTERS

Direct energy converter for UW tandem mirror reactor, 8:25134 (J:US)

DIRECT GAIN SYSTEMS

Prior to September 1980 HEAT GAIN was used to index this concept.

Performance

Solar-energy-system performance evaluation: Colorado Sunworks single-family residence, Longmont, Colorado, November 1978-May 1979, 8:23337 (R:US)

Solar-energy-system performance evaluation: Hullco Construction Company single-family residence, Prescott, Arizona, May 1978-April 1979, 8:23334 (R:US)

Solar-energy-system performance evaluation: Living Systems single-family residence, Davis, California, October 1978-March 1979, 8:23336 (R:US)

DIRICHLET PROBLEM

Numerical Solution

DPOLE; helmholtz equation on general 3-dimensional region (CDC6600,7600; FORTRAN IV, FTN 4.6+460 compiler), 8:25246 (R:US)

DISCHARGES (WASTES)

See WASTE DISPOSAL

DISINTEGRATION (FISSION)

See FISSION

DISPERSANTS (CHEMICAL)

See SURFACTANTS

DISPERSION NUCLEAR FUELS

Measuring Methods

Role of fuel power in HCDA early fuel dispersal, 8:23650 (J:US)

DISPOSAL (WASTES)

See WASTE DISPOSAL

DISSOLVED MATERIALS

DISTRIBUTED COLLECTOR POWER PLANTS

Demonstration Programs

Solar Total-Energy Project, Shenandoah, Georgia site. Annual technical progress report, July 1, 1980-June 30, 1982, 8:23301 (R:US)

DISTRICT HEATING

See also GEOTHERMAL DISTRICT HEATING

Design

Assessment of European district-heating technology, 8:23702 (R:US)

Technology Assessment

Assessment of European district-heating technology, 8:23702 (R:US)

DIVERTORS

See also PDX DEVICES
POLOIDAL DIVERTORS

RF divertor principle study in the TFR plasmas, 8:24861 (J:NL)

Design

Mechanical design of a toroidal divertor for EBT-S, 8:24984 (J:US)

Efficiency

Divertor efficiency in ASDEX, 8:24863 (J:NL)

Erosion

Erosion and redeposition analysis for limiter and divertor impurity control systems, 8:24878 (J:NL)

Flow Models

Plasma motion and purification in an ergodic divertor, 8:24871 (J:NL)

Theoretical model for hot plasma flowing to a wall with recycling, 8:24870 (J:NL)

Heat Transfer

Neutral gas blanket effects in a gaseous divertor, 8:24858 (J:NL)

Performance
Divertors and impurity control: where we stand, where we have to go, 8:24867 (J:NL)
Simulation
Monte Carlo simulation of the neutral gas density and temperature distribution due to the recycling processes at a poloidal, toroidal or mushroom limiter and at the divertor plate of a poloidal divertor, 8:24874 (J:NL)
Targets
Thermal and structural analysis of solid divertor targets for e-beam testing, 8:25209 (J:US)
Thermal Stresses
Thermal and structural analysis of solid divertor targets for e-beam testing, 8:25209 (J:US)

DMBA
See DIMETHYLBENZANTHRACENE

DNA
Alkylation
Molecular dosimetry of ethylene oxide in the mouse, 8:24436 (RA:US)
Biological Radiation Effects
Immunological detection of two types of cyclobutane pyrimidine dimers in DNA, 8:24392 (J:US)
Biological Repair
DNA repair in human cells, 8:24417 (RA:US)
DNA repair studies in mammalian germ cells, 8:24433 (RA:US)
Excision repair of DNA damage. III. The regulation of excision repair. Oncology overview, 8:24322 (R:US)
Genetic analysis of DNA repair in man with cell hybrids (Ultraviolet radiation), 8:24377 (RA:US)

DORMITORIES
See RESIDENTIAL BUILDINGS

DOUBLET 3 DEVICES
See DOUBLET REACTORS

DOUBLET REACTORS
Control Systems
Computer control and data acquisition for neutral-beam injectors, 8:24829 (R:US)
Data Acquisition Systems
Computer control and data acquisition for neutral-beam injectors, 8:24829 (R:US)
Data Base Management
Status of Doublet III data archival and retrieval system, 8:25168 (J:US)
Design
Modification of Doublet III to a large dee facility, 8:24945 (J:US)
Divertors
High density, single-null poloidal divertor results in doublet III, 8:24866 (J:NL)
Review of the recent expanded boundary divertor experiments in the Doublet III device, 8:24865 (J:NL)
Limiters
Changes in limiter surface temperature profiles for small radius plasmas in Doublet III, 8:24896 (J:NL)
Modifications
Modification of Doublet III to a large dee facility, 8:24945 (J:US)
Neutral Beam Sources
Doublet III neutral beam power system, 8:25090 (J:US)
Magnetic shielding and eddy current effects measurements in a Doublet III neutral beam injector, 8:25091 (J:US)
Plasma Diagnostics
Laser-fluorescence measurements of hydrogen and metal densities in the Doublet III tokamak, 8:24763 (R:US)
Radiation Protection
Doublet III vessel wall protection for 7 MW neutral beam heated plasma operation, 8:24968 (J:US)
Shielding
Doublet III vessel wall protection for 7 MW neutral beam heated plasma operation, 8:24968 (J:US)
Stability
Stability of Doublet III plasmas against axisymmetric resistive MHD modes, 8:24913 (J:GB)

DRESDEN-2 REACTOR
Primary Coolant Circuits
Oxygen suppression in boiling-water reactors: Phase 2. Final report, 8:23447 (R:US)
Water Chemistry
Oxygen suppression in boiling-water reactors: Phase 2. Final report, 8:23447 (R:US)

DRIFT INSTABILITY
Saturation
Saturation of the lower-hybrid-drift instability by mode coupling, 8:24777 (J:US)

DRIFT (ION)
See ION DRIFT

DRILL BITS
Design
Analytical and experimental investigations of rock cutting using polycrystalline diamond compact drag cutters, 8:23028 (J:US)
Performance Testing
Analytical and experimental investigations of rock cutting using polycrystalline diamond compact drag cutters, 8:23028 (J:US)

DRILL CORES
Computer Graphics
SECTION.REV1; plot geochemical drill hole data (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23379 (R:US)
Hydrocarbons
Method and apparatus for recovering unstable cores, 8:23020 (P:US)
Recovery
Method and apparatus for recovering unstable cores, 8:23020 (P:US)
Stabilization
Method and apparatus for recovering unstable cores, 8:23020 (P:US)
DRILL PIPES
Liners
Development of modifications for Coflexip flexible drilling pipe for high-temperature and -pressure geothermal service. Final report, 8:23383 (R:US)
Modifications
Development of modifications for Coflexip flexible drilling pipe for high-temperature and -pressure geothermal service. Final report, 8:23383 (R:US)
DRILL SHIPS
See OFFSHORE PLATFORMS

POLLUTION CONTROL EQUIPMENT
SOLAR EQUIPMENT
THERMAL ENERGY STORAGE EQUIPMENT
WELL LOGGING EQUIPMENT
X-RAY EQUIPMENT
Design
Detectors, sampling, shielding, and electronics for positron emission tomography, 8:24342 (R:US)
Maintenance
PROMSYS; programmed equipment maintenance (IBM370; ANS COBOL (97%) and Assembly language (3%)), 8:24094 (R:US)

ERBIUM 164
Giant Resonance
Observation of giant dipole resonances built on states of high energy, 8:24678 (RA:DE:In German)

ERBIUM 166 TARGET
Krypton 86 Reactions
Dynamical coupling of relative motion, deformations and charge transfer within a Fokker-Planck equation for deep inleastic collisions, 8:24682 (RA:DE:In German, English)

ERBIUM 168 TARGET
Neon 20 Reactions
Spin polarization in $^{20}Ne + {}^{168}Er$ collisions at 13.5 MeV/N, 8:24654 (RA:DE:In German)

ERBIUM 170 TARGET
Neon 22 Reactions
Spectroscopy of neutron-rich nuclei via particle-γ-coincidences with a magnetic spectrograph, 8:24202 (RA:DE:In German)

ERBIUM BORIDES
Ferromagnetism
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R:US)
Magnetic Specific Heat
Magnetic correlations in $ErRh_4B_4$, 8:24015 (BA:US)
Phase Transformations
Observation of a first-order phase transition in single-crystal $ErRh_4B_4$ at H/sub c2/, 8:24002 (R:US)
Spin-Lattice Relaxation
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4 (RE = Gd, Er), 8:23999 (R:US)
Superconductivity
Observation of a first-order phase transition in single-crystal $ErRh_4B_4$ at H/sub c2/, 8:24002 (R:US)
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R:US)

ERGONOMICS
See HUMAN FACTORS ENGINEERING

ERYTHROCYTES
Biological Indicators
Area program in population genetics. Final report, November 1, 1975-August 31, 1982, 8:24366 (R:US)
Cell Membranes
Studies of membrane structure by freeze-etching. Final report, January 1, 1979-December 31, 1982, 8:24325 (R:US)
Temperature Effects
Theoretical and applied cryobiology, 8:24397 (RA:US)

ESCHERICHIA COLI
Biological Radiation Effects
Lethality in repair-proficient Escherichia coli after 365nm ultraviolet light irradiation is dependent on fluence rate, 8:24393 (J:GB)
Respiration shutoff in Escherichia coli and Salmonella typhimurium after far-uv irradiation, 8:24375 (RA:US)
Genetic Radiation Effects
Genetics of repair of radiation damage to DNA in bacteria, 8:24381 (RA:US)

1,2-ETHANEDIOL
See GLYCOLS

ETHANOL FUELS
Use for pure ethanol, ethanol-water mixtures, or ethanol with additives; for ethanol-gasoline mixtures, use GASOHOL.
Feasibility Studies
Annotated review of the technological state-of-the-art of ethyl and methyl alcohol-based fuels and determination of the economic feasibility of commercial-scale production of such fuels, 8:23238 (R:US)
Production
Annotated review of the technological state-of-the-art of ethyl and methyl alcohol-based fuels and determination of the economic feasibility of commercial-scale production of such fuels, 8:23238 (R:US)

ETHERS
Corrosive Effects
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)

ETHINE
See ACETYLENE

ETHOCEL
See CELLULOSE
ETHERS

ETHYL METHANESULFONATE
See EMS

ETHYLENE GLYCOL
See GLYCOLS

EUCLIDEAN QUANTUM FIELD THEORY
See CONSTRUCTIVE FIELD THEORY

EUPHORBIA
Productivity
New sources for fuel and materials, 8:23282 (J:US)

EUROPE
District Heating
Assessment of European district-heating technology, 8:23702 (R:US)

EUROPEAN ORGANIZATION FOR NUCLEAR RESEARC
See CERN

EUROPIUM SULFIDES
Superconductivity
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)
Transition Temperature
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)

EVACUATED TUBE COLLECTORS
Compound Parabolic Concentrators
Direct solar steam-generating system, 8:23316 (R:US)

EVAPORATORS
Scale Control
Investigation of water chemical effects resulting from the application of additivs in MSF-plants, 8:23847 (R:DE:In German)

EXCHANGE (HEAT)
See HEAT TRANSFER

EXHAUST GASES
Chemical Composition
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
Mutagen Screening
Mutagenicity of diesel exhaust particle extracts: influence of driving cycle and environmental temperature, 8:24456 (J:US)
EXPERIMENTAL FACILITIES (ACCELERATOR)
See ACCELERATOR FACILITIES
EXPLOSIVE FRACTURING
Comparative Evaluations
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)
EXPLOSIVELY-DRIVEN MHD GENERATORS
See PULSED MHD GENERATORS
EXPOSURE CHAMBERS
Design
Semidynamic inhalation exposure system, 8:24437 (RA:US)
EXTRACTION (SOLVENT)
See SOLVENT EXTRACTION
EXTRAHIGH VOLTAGE ALTERNATING CURRENT SYS
See EHV AC SYSTEMS
EXXON DONOR SOLVENT LIQUEFACTION
See EXXON LIQUEFACTION PROCESS
EXXON LIQUEFACTION PROCESS
Engineering
EDS-coal-liquefaction process development. Phase IV. Construction of Exxon Coal-Liquefaction Pilot Plant. Final report, 8:22919 (R:US)
Pilot Plants
EDS-coal-liquefaction process development. Phase IV. Construction of Exxon Coal-Liquefaction Pilot Plant. Final report, 8:22919 (R:US)
Overview of coal liquefaction in the US Department of Energy, 8:22917 (R:US)
Pumps
EDS-coal-liquefaction process development. Phase IV. Construction of Exxon Coal-Liquefaction Pilot Plant. Final report, 8:22919 (R:US)

F

FABRIC FILTERS
Performance
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
FACILITIES (ACCELERATOR)
See ACCELERATOR FACILITIES
FACILITIES (MILITARY)
See MILITARY FACILITIES
FACILITIES (NUCLEAR)
See NUCLEAR FACILITIES
FACILITIES (RESOURCE RECOVERY)
See RESOURCE RECOVERY FACILITIES
FACILITIES (STORAGE)
See STORAGE FACILITIES
FACILITIES (TEST)
See TEST FACILITIES
FAILED ELEMENT DETECTION
DN detection during SLSF tests, 8:23587 (R:US)
FALLOUT
For radioactive fallout only.
See also FALLOUT DEPOSITS
Radionuclide Migration
Comparative behavior of plutonium and americium in the equatorial Pacific, 8:24295 (R:US)
FALLOUT DEPOSITS
Mathematical Models
Estimation of airborne and surface contamination resulting from the deposition-resuspension process, 8:24251 (J:GB)
FALLOUT PARTICULATES
See FALLOUT PARTICLES
FARADAY GENERATORS
See MHD GENERATORS
FARM EQUIPMENT
Feasibility Studies
Electric vehicles: assessment of potential for North Central Region farm operations, 8:23887 (J:US)
Technology Assessment
Electric vehicles: assessment of potential for North Central Region farm operations, 8:23887 (J:US)
FAST BREEDER TYPE REACTORS
See FBR TYPE REACTORS
FAST FLUX TEST FACILITY REACTOR
See FFTF REACTOR
FAST REACTORS
See also FBR TYPE REACTORS
FFTF REACTOR
ZPR-9 REACTOR
Fuel Assemblies
Fluid-cushioned impact between reactor fuel assemblies for seismic disturbances, 8:23643 (J:US)
Reactor Accidents
PROSA2; probabilistic response surface studies (IBM370; FORTRAN IV (95%) and Assembly language (5%)), 8:23580 (R:US)
Reactor Licensing
BONAMI-S: response self-shielding by the Bondarenko method. Volume 2. Functional studies (BONAMI-S code), 8:23543 (R:US)
FAST-MIXED SPECTRUM REACTOR
See FBR TYPE REACTORS
FATTY ACIDS
See CARBOXYLIC ACIDS
FAULT TREE ANALYSIS
Computer Codes
IMPORTANCE; FTA basic event & cut set ranking (IBM370; FORTRAN IV), 8:25240 (R:US)
FAULT TREE SYSTEMS
See FAULT TREE ANALYSIS
FBR TYPE REACTORS
See also LMFBR TYPE REACTORS
Energy Policy
Role of the breeder in long-term energy economics, 8:23701 (R:US)
Reactor Core Disruption
ALICE-11: an arbitary lagrangian-eulerian code for containment analysis with complex internals, 8:23642 (J:US)
F-CHART
Computer Codes
FCHART/SLR2.0; solar heating system performance (DEC20;DEC VAX11/780; FORTRAN 77), 8:23311 (R:US)
FEDAL
See FAILED ELEMENT DETECTION
FEDERAL ENERGY ADMINISTRATION
See US FEA
FEDERAL ENERGY REGULATORY COMMISSION
See US FERC
FEDERAL REGION V
Prior to June 1982 this concept was indexed to GREAT LAKES REGION.

INDIANA
MICHIGAN
OHIO
Energy Demand
Midwest region energy outlook, 8:23686 (R:US)
Energy Sources
Midwest region energy outlook, 8:23686 (R:US)
Energy Supplies
Midwest region energy outlook, 8:23686 (R:US)
FEDERAL REPUBLIC OF GERMANY
The growth of energy consumption and prices in the USA, FRG, France, and the UK, 1950-1980. Final report, 8:23757 (R:US)
Coal Gasification Plants
Further development on a 170 MW prototype plant with pressurized coal gasification and gas-/steam turbine power plant at Luenen, 8:22912 (R:DE:In German)

Coal Mines
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries, 8:22977 (R:PL)
Coal Mining
Coal mining in the West German power industry in 1981, 8:22979 (R:DE:In German)
Coal Reserves
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries, 8:22977 (R:PL)
Cogeneration
Chances of continued heat and power generation in public power stations in combination with district heating, 8:23747 (R:DE:In German)
Combined-Cycle Power Plants
Further development on a 170 MW prototype plant with pressurized coal gasification and gas-/steam turbine power plant at Luenen, 8:22912 (R:DE:In German)
District Heating
Chances of continued heat and power generation in public power stations in combination with district heating, 8:23747 (R:DE:In German)
Electrical Engineering
Statistical report '82, 8:23749 (R:DE:In German)
Energy Conservation
Energy conservation, 8:23709 (R:DE:In German)
Energy Policy
Activity report 1981/82, 8:23718 (R:DE:In German)
Environmental Policy
Air pollution by sulfur dioxide, 8:24240 (R:DE:In German)
Nuclear Power Plants
Operating experiences with nuclear power plants in the Federal Republic of Germany (1974 summary), 8:23444 (TJ:US)

FEDERAL WATER POLLUTION CONTROL ACT
See CLEAN WATER ACT

FEED MATERIALS PLANTS
Radioactivity Transport
UDAD; uranium dispersion & dosimetry model (IBM370,303x; FORTRAN IV (94%), PLL/I (4%), and Assembly language (2%). The only use of PL/I is the auxiliary plotting program, CONTOUR. The only use of Assembly language is the DATE, Gregorian calendar date routine), 8:23187 (R:US)

FERMI FLUID
See FERMI GAS

FERMI GAS
Ground States
Hard-core square-well fermions, 8:24756 (J:US)
Pade Approximation
Hard-core square-well fermions, 8:24756 (J:US)
Pairing Interactions
Hard-core square-well fermions, 8:24756 (J:US)

FERMI LEVEL
Measuring Methods
Installation of a positron annihilation apparatus for the investigation of Fermi surfaces, 8:24725 (R:DE:In German)
Positron Beams
Installation of a positron annihilation apparatus for the investigation of Fermi surfaces, 8:24725 (R:DE:In German)

FERMI LIQUID
See FERMI GAS

FERMI SURFACE
See FERMI LEVEL

FERMI-DIRAC GAS
See FERMI GAS

FERRIMAGNETIC MATERIALS
See also FERRITES
Fabrication
Magnetic powder for treatment of oil-polluted waste water and process for manufacturing the powder (Japanese patent), 8:23975 (TG:US)
Surface Coating
Magnetic powder for treatment of oil-polluted waste water and process for manufacturing the powder (Japanese patent), 8:23975 (TG:US)

FERRITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Recycling
Process for removal of organic solvents (Japanese Patent), 8:24054 (TG:US)
Sorptive Properties
Process for removal of organic solvents (Japanese Patent), 8:24054 (TG:US)

FERROMAGNETIC MATERIALS
Spin Waves
Spin waves at surfaces and steps in ferromagnets and antiferromagnets, 8:24741 (R:US)

FERTILE MATERIALS
Neutron Reactions
DOPSEL; self-shielding in the resonance region (IBM370; FORTRAN IV), 8:24702 (R:US)

FESSENHEIM-1 REACTOR
Fuel Rods
High burnup irradiation programs of the FRAGEMA 17 x 17 standard fuel, 8:23479 (RA:US)

FESSENHEIM-2 REACTOR
Fuel Rods
High burnup irradiation programs of the FRAGEMA 17 x 17 standard fuel, 8:23479 (RA:US)

FETUSES
Prenatal Irradiation
Effects of monomeric ^{239}Pu on the fetal rabbit, 8:24394 (J:GB)

FFTF REACTOR
Reactor Vessels
Steady-state simulation of the FFTF in-vessel thermal hydraulics, 8:23577 (J:US)

FIBER OPTICS
Data Transmission
Method for transmitting analog data over a fiber-optic link, 8:25194 (J:US)
Wide band fiber optic analog data link, 8:25195 (J:US)

FIBERGLASS
Evaluation
Diallyl phthalate prepolymer characterization and testing in fiberglass filled molding compounds, 8:24019 (R:US)

FIELD OFFICES
See US DOE FIELD OFFICES

FIELD-REVERSED MIRROR REACTORS
FRTP prototype power reactors with neutral-beam heating and pellet injection, 8:25080 (J:US)
Breeding Blankets
Low activation blanket for the moving ring field-reversed mirror reactor, 8:24978 (J:US)

FIELDS (ELECTRIC)
See ELECTRIC FIELDS

FIELDS (MAGNETIC)
See MAGNETIC FIELDS

FILLING STATIONS
See GASOLINE SERVICE STATIONS

FILTERS
See also FABRIC FILTERS
Efficiency
Development of dry-filter dust extractors to reduce dust development during operation of heading machines, 8:24229 (R:DE:In German)
Particle size for greatest penetration of HEPA filters - and their true efficiency, 8:24244 (R:US)
Radiation Heating
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)
Sealing Materials
Removable, hermetically-sealing, filter attachment system for hostile environments, 8:23552 (P:US)
Thermal Analysis
CHART; iodine decay heat on charcoal adsorbers (IBM360,370,303x; FORTRAN IV), 8:23583 (R:US)

FINANCIAL DATA
Financial management in the oil-shale program, 8:23080 (R:US)

FINANCIAL MANAGMENT
See PROGRAM MANAGEMENT
FINANCING
Comparative Evaluations
Energy company development patterns in the postembargo era. An overview of financial performance, 1974-1980. Volume 1: analysis of trends (Glossary), 8:23699 (R:US)
FINGERPRINTING (OIL SPILLS)
See OIL SPILLS
FINITE ELEMENT METHOD
Mesh Generation
INGEN; finite element program mesh generator (CDC7600; FORTRAN IV), 8:25261 (R:US)
FINS
Roughness
Friction factor correlation for the offset strip-fin matrix, 8:24104 (R:US)
FIRE STATIONS

FIRST WALL
Cleaning
Study of the erosion rate of vacuum arcs in a transverse magnetic field, 8:24885 (J:NL)
Coatings
Development of low-Z surface coatings for JT-60 first wall, 8:24908 (J:NL)
Structure of metallic coatings for impurity control in MACROTOR, 8:24882 (J:NL)
Creep
Creep deformation of first wall components following a plasma disruption, 8:24890 (J:NL)
Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall, 8:24827 (R:US)
Degassing
Outgassing characteristics of TiC coated materials, 8:24909 (J:NL)
Design
Conceptual design and material consideration on toroidal CTR first wall, 8:24963 (J:US)
Conceptual design of the INTOR first wall system, 8:25173 (J:US)
Conceptual design of the INTOR first-wall system, 8:24823 (R:US)
Elmo Bumpy Torus-reactor first wall/blanket shield (FWBS) design, 8:24972 (J:US)
Key design issues in the definition of the fusion engineering device (FED) first wall and limiter features, 8:24961 (J:US)
Towards strategy of reliable fusion first wall design, 8:24960 (J:US)
Electromagnetic Radiation
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
Embrittlement
Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall, 8:24827 (R:US)
Erosion
Can wall and limiter erosion be eliminated in fusion reactors?, 8:24966 (J:US)
Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall, 8:24827 (R:US)
Global estimates of impurity levels and wall erosion in INTOR, 8:24869 (J:NL)
INTOR first wall erosion during plasma disruption, 8:24964 (J:US)
Self-sustaining erosion-resistant low z coatings for first wall and limiter applications I: theory, 8:24967 (J:US)
Fatigue
Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall, 8:24827 (R:US)
Fatigue data of molybdenum, 8:25164 (J:US)
Heat Flux
Dynamics of melting, evaporation, and resolidification of materials exposed to plasma disruptions, 8:24893 (J:NL)
Heat Transfer
Gas dynamics and heat transfer phenomena in liquid metal ICF reactor first surfaces, 8:25138 (J:US)
Jets
Liquid jet experiments: relevance to inertial confinement fusion reactors, 8:25156 (J:US)
Materials Testing
Important material considerations in INTOR, 8:24820 (R:US)
Modular Structures
Modular first wall concept for steady state operation, 8:24965 (J:US)
Permeability
Tritium permeation in fusion reactor first walls, 8:24901 (J:NL)
Radioactivation
Environment and safety: major goals for MARS, 8:24846 (R:US)
Sputtering
Numerical analysis of plasma-wall interaction for an oblique magnetic field, 8:24794 (J:NL)
Stresses
Low density cavity gas fireball dynamics in the light ion beam target development facility, 8:24920 (J:US)
Swelling
Effect of irradiation creep, swelling, wall erosion and embrittlement on the fatigue life of a tokamak first wall, 8:24827 (R:US)
Test Facilities
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
The FELIX experimental program and future upgrades, 8:24971 (J:US)
Thermonuclear Reactor Materials
Surface segregation in binary alloy first wall candidate materials, 8:24904 (J:NL)
Wall Loading
Dynamics of melting, evaporation, and resolidification of materials exposed to plasma disruptions, 8:24893 (J:NL)
Melt layer stability following a plasma disruption, 8:24894 (J:NL)
Modeling the thermodynamic response of metallic first walls during a plasma disruption, 8:24891 (J:NL)
Review of the plasma-material interaction problems for reacting and burning plasma experiments, 8:24796 (J:NL)
FISCHER-TROPSCH SYNTHESIS
Bench-Scale Experiments
Synthesis of liquids and pipeline gas by Fischer-Tropsch, 8:23221 (R:US)
Catalysts
Catalysts and relations of selectivity for the Fischer-Tropsch-Synthesis, 8:22915 (R:DE:In German)
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Synthesis of liquids and pipeline gas by Fischer-Tropsch, 8:23221 (R:US)
Transportation fuels from indirect coal liquefaction (US DOE; reviews and considers work in other countries), 8:22918 (R:US)
Chemical Reaction Yield
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Optimization
Synthesis of liquids and pipeline gas by Fischer-Tropsch, 8:23221 (R:US)
FISH CULTURE
See FISHERIES
FISH HATCHERIES
See FISHERIES

FISHERIES
Prior to August 1981, this concept was indexed to AQUACULTURE.
Biomass
Habitat suitability index models: regression models based on harvest of cool and coldwater fishes in reservoirs, 8:24398 (R:US)
FISHES
Habitat
Habitat suitability index models: regression models based on harvest of cool and coldwater fishes in reservoirs, 8:24398 (R:US)
FISSILE MATERIALS
Neutron Reactions
DOPSEL; self-shielding in the resonance region (IBM370; FORTRAN IV), 8:24702 (R:US)
FISSION
Neon 20 Reactions
Fission fragment angular correlation in 300 MeV ^{20}Ne induced reactions on heavy targets, 8:24686 (RA:DE:In German, English)
FISSION PRODUCT RELEASE
Coordinate with descriptors for the area of release such as BIOSPHERE or COOLANTS, and for the specific fission products, if known.
Computer Calculations
Comparison of COMETHE-IIIJ and FCODE-BETA fission gas-release predictions with measurements. Final report (PWR; BWR), 8:23466 (R:US)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FIXED-PRICE CONTRACTS
Cost Overruns
Tokamak Fusion Test Reactor Project, 8:24828 (R:US)
FLAMES
Optical Properties
Comparative study of the combustion of alternate liquid fuels, 8:22994 (R:US)
FLASH HYDROPYROLYSIS PROCESS
Comparative Evaluations
The flash pyrolysis and hydropyrolysis of coal, 8:22901 (RA:CA)
Research Programs
The Canmet research program on coal pyrolysis - application to eastern Canada, 8:22905 (RA:CA)
FLASKS
See CASES
FLAT PLATE COLLECTORS
Bibliographies
Solar thermal energy utilization: a bibliography with abstracts. Quarterly update, April-June 1975, 8:23323 (R:US)
Performance Testing
Determination of incident angle modifiers for flat-plate solar collectors. Final report, 8:23353 (R:US)
Test Facilities
Test stations for flat plate collectors for Iran, Brazil and India, 8:23259 (R:DE:In German)
FLOW CYTOMETERS
See CELL FLOW SYSTEMS
FLOW (FLUID)
See FLUID FLOW
FLUE GAS
Air Pollution Control
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
Electrostatically augmented gas-cleanup devices for particular removal, 8:22947 (R:US)
Chemical Analysis
Measurements of POM emissions from coal-fired utility boilers. Final report, 8:22958 (R:US)
Chemical Composition
Slow strain rate stress corrosion testing of boiler construction materials in synthetic flue gas at elevated temperatures, 8:23910 (RA:US)
Corrosive Effects
Slow strain rate stress corrosion testing of boiler construction materials in synthetic flue gas at elevated temperatures, 8:23910 (RA:US)
Denitrification
DOE's electron-beam-irradiation development program (Avco/EBARA (E-beam/ammonia) Process; Research-Cottrell (E-beam/lime slurry) process), 8:22954 (R:US)
Simultaneous removal of SO_2 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Desulfurization
Advanced environmental control technology , 8:22952 (R:US)
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
DOE's electron-beam-irradiation development program (Avco/EBARA (E-beam/ammonia) Process; Research-Cottrell (E-beam/lime slurry) process), 8:22954 (R:US)
Effect of trace metals and sulfite oxidation of adipic acid degradation in FGD systems. Final report Dec 81-May 82, 8:22957 (R:US)
Experimental evaluation of spray-dryer flue-gas desulfurization for use with Eastern US coals, 8:23428 (R:US)
Flue gas desulfurization information system data base user's manual, 8:24241 (R:US)
Process for removing sulfur oxides from gases with direct production of a usable finished reaction product, 8:22943 (R:DE:In German)
Simultaneous removal of SO_2 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Hot Gas Cleanup
Advanced environmental control technology , 8:22952 (R:US)
Sampling
Measurements of POM emissions from coal-fired utility boilers. Final report, 8:22958 (R:US)
Scrubbing
Process for removing sulfur oxides from gases with direct production of a usable finished reaction product, 8:22943 (R:DE:In German)
FLUID FLOW

FUEL ASSEMBLIES
Burnup
Design and development of KWU 18 x 18 PWR and 9 x 9 BWR fuel assemblies and their relevance to burnup increase, 8:23459 (RA:US)
Design
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R:US)
Reactor Core Disruption
Fluid-cushioned impact between reactor fuel assemblies for seismic disturbances, 8:23643 (J:US)
Specifications
Design and development of KWU 18 x 18 PWR and 9 x 9 BWR fuel assemblies and their relevance to burnup increase, 8:23459 (RA:US)
Development of an extended burnup fuel assembly (PWR), 8:23488 (RA:US)
FUEL CANS
Corrosion
Observations and analyses of the corrosion behavior of PWR fuel, 8:23487 (RA:US)
Deformation
Study of LWR fuel behavior by well characterized tests. Part I. Inpile measurement of cladding diametral deformation with burnup, 8:23454 (RA:US)
Performance Testing
Study of LWR fuel behavior by well characterized tests. Part I. Inpile measurement of cladding diametral deformation with burnup, 8:23454 (RA:US)
Stress Corrosion
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
FUEL CELL POWER PLANTS
For commercial, residential, or electric utility use.
Design
20 kW fuel cell units of compact assembly. Pt. 6, 7, 8:23789 (R:DE:In German)
Operation
20 kW fuel cell units of compact assembly. Pt. 6, 7, 8:23789 (R:DE:In German)
FUEL COOLING INSTALLATIONS

Comments on the effect of coal-particle-size consist on furnace ash deposition, 8:22998 (R:US)
Combustion Properties
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)
Comparative study of the combustion of alternate liquid fuels (Middle and high boiling SRC-II distillates coal-oil mixtures), 8:22994 (R:US)
Electrochemistry
Electrochemical studies of coal slurry oxidation mechanisms, 8:22937 (J:US)
Heat Transfer
Proposal for research on heat transfer and hydrodynamics in preheaters for direct coal-liquefaction processes (Up to 450°C and 2000 psig), 8:22928 (R:US)
Oxidation
Electrochemical studies of coal slurry oxidation mechanisms, 8:22937 (J:US)
Performance Testing
Coal-liquid mixture combustion tests in oil-designed boilers at CTEP, 8:22997 (R:US)
Physical Properties
Proposal for research on heat transfer and hydrodynamics in preheaters for direct coal-liquefaction processes (Up to 450°C and 2000 psig), 8:22928 (R:US)
Pumping
Investigation of pulsation in slurry-pumping systems in coal-liquefaction plants. Final report, 8:22929 (R:US)
Viscosity
Proposal for research on heat transfer and hydrodynamics in preheaters for direct coal-liquefaction processes (Up to 450°C and 2000 psig), 8:22928 (R:US)
FUEL SUBSTITUTION
Economic Analysis
Modeling industrial-boiler retirement economics, 8:23696 (R:US)
FUEL SUPPLIES
Mathematical Models
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
FUEL SUSPENSIONS
See FUEL SLURRIES
FUEL-CLADDING INTERACTIONS
High burnup effects on the pellet-cladding interaction phenomenon (PWR), 8:23484 (RA:US)
Fuel Motion Detection
The effects of flowing fuel particulate on bulk freezing predictions, 8:23647 (J:US)
Mathematical Models
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
Plugging
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
Thermal Conductivity
Fuel - cladding gap conductance measurements using Kalman filter methods, 8:23546 (J:US)

FUELS

FUSION (WELDING)
See WELDING

G

GADOLINIUM
Nuclear Quadrupole Resonance
Quadrupole moment of the 7⁻ isomer in ^{148}Sm, 8:24677 (RA:DE:In German)

GADOLINIUM 150
Giant Resonance
Observation of giant dipole resonances built on states of high energy, 8:24678 (RA:DE:In German)

GADOLINIUM 156
Gyromagnetic Ratio
Observation of a decrease in the g-factors of sup(156,160)Gd at high spins, 8:24688 (RA:DE:In German, English)

GADOLINIUM 160
Gyromagnetic Ratio
Observation of a decrease in the g-factors of sup(156,160)Gd at high spins, 8:24688 (RA:DE:In German, English)

GADOLINIUM BORIDES
Spin-Lattice Relaxation
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4 (RE = Gd, Er), 8:23999 (R:US)

GADOLINIUM OXIDES
Sintering
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R:US)
Thermal Conductivity
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R:US)

GALLIUM ARSENIDES
Corrosion
Kinetic aspects of the n-GaAs/(S/Se)sub(n)sup(2-) photoelectrochemical cell, 8:23262 (R:FR)
Electrical Properties
Electrical characterization of grain boundaries in GaAs, 8:24034 (J:US)
Grain Boundaries
Electrical characterization of grain boundaries in GaAs, 8:24034 (J:US)
Phase Transformations
Phase transitions in high magnetic fields, 8:23888 (R:US)

GAMMA ASTRONOMY
For photon energies above 100 KeV.
Gamma-line astronomy, 8:24507 (J:GB)

GAMMA RADIATION
Transmission
SPAR1; shielding with analytic ray-tracing (CDC6600,7600; FORTRAN IV), 8:24719 (R:US)

GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Dose Rates
PELSHIE2; point kernel integration shielding (IBM360,303x; FORTRAN IV (99%) and BAL (1%)), 8:24720 (R:US)

GARRETT PROCESS
See OXY MODIFIED IN-SITU PROCESS

GAS BLANKETS
For plasma confinement. For other gas blankets see COVER GAS or INERT ATMOSPHERE.
Energy Balance
Summary of processes relevant for the particle balance of a cold plasma blanket contaminated with a small amount of helium, 8:24837 (R:NL)

GAS BURSTS
See ROCK BURSTS

GAS CENTRIFUGES
Gas Flow
Green's function for Onsager's pancake equation, 8:23103 (R:US)

GAS COOLANTS
See GASES

GAS COOLED REACTORS
See also HTGR TYPE REACTORS
Bibliographies
Gas-cooled reactor technology: a bibliography, 8:23507 (R:US)

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FIELDS
See NATURAL GAS FIELDS

GAS HEAT PUMPS
Power Supplies
Fuel saving of hot water heating plants by application of heat pumps operated with natural gas (natural gas heat pump), 8:23802 (R:DE:In German)
GAS INJECTION
Computerized Control Systems
Design and development of the torus gas injection control system for TFTR, 8:25103 (J:US)
GAS LASERS
Stabilization
Inductively stabilized rare-gas halide minilaser for long-pulsed operation, 8:24133 (J:US)
GAS SPILLS
Energy and technology review, 8:24842 (R:US)
Aerial Monitoring
BAGI: a technique for the detection and tracking of large gas clouds, 8:23070 (R:US)
Computer Codes
SLAB: a time-dependent computer model for the dispersion of heavy gases released in the atmosphere, 8:23068 (R:US)
Environmental Transport
Denser-than-air dispersion modeling in the atmosphere, 8:23071 (R:US)
Field Tests
Large-scale hazardous gas release experiments, 8:23069 (R:US)
Mathematical Models
Predicting hazards from large spills of liquefied gases, 8:23067 (RA:US)
Remote Sensing
BAGI: a technique for the detection and tracking of large gas clouds, 8:23070 (R:US)
Spatial Distribution
Denser-than-air dispersion modeling in the atmosphere, 8:23071 (R:US)
Predicting hazards from large spills of liquefied gases, 8:23067 (RA:US)
SLAB: a time-dependent computer model for the dispersion of heavy gases released in the atmosphere, 8:23068 (R:US)
GAS STATIONS
See GASOLINE SERVICE STATIONS
GAS TURBINE POWER PLANTS
Performance
Gas-Turbine Evaluation (GATE) Computer Program: thermodynamic cycles, methods, and sample cases. Final report, 8:23417 (R:US)
GAS TURBINES
Combustors
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
Corrosion
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
Materials
Directionally solidified eutectic superalloys for stationary gas turbines, 8:23407 (R:DE:In German)
Performance
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
Gas-Turbine Evaluation (GATE) Computer Program: thermodynamic cycles, methods, and sample cases. Final report, 8:23417 (R:US)
Protective Coatings
Critical Research and Advanced Technology (CRT) Support Project. Summary report, 8:23415 (R:US)
GAS WELLS

EXHAUST GASES
FUEL GAS
SYNTHESIS GAS
Chapman-Enskog Theory
Comment on: On the Chapman—Enskog solution method for mixtures [B. C. Eu, J. Chem. Phys. 74, 6373 (1981)], 8:24752 (J:US)
Diffusion
Effect of a two-dimensional obstacle on the dispersion of a heavier-than-air gas in an atmospheric boundary layer, 8:24243 (R:US)
Monte Carlo simulation of diffusion of gases in a porous solid: Calculations for a new class of solids, 8:24742 (J:US)
Thermodynamic Properties
Fortran computer-code package for the evaluation of gas-phase viscosities, conductivities, and diffusion coefficients (CHEMKIN), 8:24137 (R:US)
Transport Theory
Comment on: On the Chapman—Enskog solution method for mixtures [B. C. Eu, J. Chem. Phys. 74, 6373 (1981)], 8:24752 (J:US)
Viscosity
Fortran computer-code package for the evaluation of gas-phase viscosities, conductivities, and diffusion coefficients (CHEMKIN), 8:24137 (R:US)
GAS-INSULATED SUBSTATIONS
Lightning Arresters
Metal-oxide surge arresters for gas-insulated systems, Phases I and II. Final report, 8:23438 (R:US)
GAS-INSULATED TRANSFORMERS
Design
Compact gas-insulated transformer. Thirteenth quarterly report, 8:23433 (R:US)
Manufacturing
Compact gas-insulated transformer. Thirteenth quarterly report, 8:23433 (R:US)
GASOLINE
Allocations
Allegations of improper supplier practices affecting gasoline lines at independent stations, 8:23042 (R:US)
Chemical Reaction Yield
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Yields
Synthesis of liquids and pipeline gas by Fischer-Tropsch, 8:23221 (R:US)
GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES
GASOLINE PLANTS
Design
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
Engineering
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
GASOLINE SERVICE STATIONS
Supply Disruption
Allegations of improper supplier practices affecting gasoline lines at independent stations, 8:23042 (R:US)
GENE MUTATIONS
Calculation Methods
Development of methods and criteria for deciding whether specific-locus mutation-rate data indicate a positive, negative, or inconclusive result, 8:24330 (RA:US)
Genetic Mapping
Analysis of the albino-locus region of the mouse: characterization of 34 deficiencies, 8:24333 (RA:US)
GENERATORS (ELECTRIC)
See ELECTRIC GENERATORS
GENERATORS (PULSE)
See PULSE GENERATORS

GENERATORS (STEAM)
See STEAM GENERATORS
GENETIC MAPPING
Genetic basis of mutagenesis and carcinogenesis, 8:24418 (RA:US)
GEOCHEMICAL SURVEYS
Computer Graphics
PLANMAP.REV1; plots geochemical data in plan (UNIVAC1108,1100; FORTRAN V (97%) and Assembly language (3%)), 8:23365 (R:US)
GEOLOGIC ENGINEERING
See ENGINEERING GEOLOGY
GEOMORPHOLOGY
Computer Codes
BLOCKS: a block-motion code for geomechanics studies, 8:24493 (R:US)
Equations of Motion
BLOCKS: a block-motion code for geomechanics studies, 8:24493 (R:US)
GEOPHONES
See SEISMIC DETECTORS
GEOPHYSICAL SURVEYS
See also SEISMIC SURVEYS
Induced Polarization Logging
IP2D.REV1; resistivity & induced-polarization (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23367 (R:US)
Resistivity Logging
SLUMB.REV0; one-dimensional Schlumberger inversion program (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23364 (R:US)
GEOTHERMAL AREAS
See GEOTHERMAL FIELDS
GEOTHERMAL DISTRICT HEATING
Computerized Simulation
GEOCITY; geothermal district heating economics (CDC CYBER74;CDC6600,7600; FORTRAN IV), 8:23384 (R:US)
Design
Design of the Klamath Falls geothermal district heating network, 8:23386 (J:US)
Design of a geothermal district heating system for Boise, Idaho, 8:23387 (J:US)
Economics
Design of a geothermal district heating system for Boise, Idaho, 8:23387 (J:US)
GEOTHERMAL ENERGY
Bibliographies
Abstracts of final reports of the first R and D programme on geothermal energy, 8:23361 (R:US)
GEOTHERMAL ENERGY CONVERSION
Feasibility Studies
Geothermal probabilistic cost study, 8:23376 (R:US)
GEOTHERMAL FIELDS
Drill Cores
SECTION.REV1; plot geochemical drill hole data (UNIVAC1108,1100; FORTRAN V (99%) and Assembler (1%)), 8:23379 (R:US)
GEOTHERMAL FLUIDS
Measuring Instruments
Development of an instrument to measure the concentration of noncondensable gases in geothermal discharges. Final report, October 1, 1978-September 30, 1979, 8:23373 (R:US)
GEOTHERMAL HEATING
See also GEOTHERMAL DISTRICT HEATING
Economic Analysis
Geothermal heating, 8:23385 (R:US)
GEOTHERMAL POWER PLANTS
Commercialization
Five-megawatt geothermal-power pilot-plant project, 8:23375 (R:US)
Life-Cycle Cost
GCFM5.0; geothermal field & power plant costs (IBM370,303x; FORTRAN IV), 8:23378 (R:US)
Program Management
Five-megawatt geothermal-power pilot-plant project, 8:23375 (R:US)
Technology Assessment
Energy technology data handbook. Vol. 1, 8:23423 (R:DE)
GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS
GEOTHERMAL SYSTEMS

Economics
Geothermal probabilistic cost study, 8:23376 (R:US)
Heat Transfer
SCHAFF; heat & water transfer in porous media (CDC7600; FORTRAN IV), 8:23362 (R:US)
Natural Convection
SCHAFF; heat & water transfer in porous media (CDC7600; FORTRAN IV), 8:23362 (R:US)
Thermal Energy Storage Equipment
SOLTES1; thermal energy systems simulation (CDC6600,7600; FORTRAN IV (99%) and COMPASS (1%)), 8:23663 (R:US)
GEOTHERMAL WELLS
Mathematical Models
Quasi-steady model for predicting temperature of aqueous foams circulating in geothermal wellbores, 8:23382 (R:US)
Testing
City of North Bonneville, Washington: Geothermal Exploration Project, production test well, Phase II. Final report, 8:23380 (R:US)
Water Pumps
Raft river geothermal pump disassembly and inspection, 8:23381 (R:US)
Well Drilling
City of North Bonneville, Washington: Geothermal Exploration Project, production test well, Phase II. Final report, 8:23380 (R:US)
Well Temperature
Quasi-steady model for predicting temperature of aqueous foams circulating in geothermal wellbores, 8:23382 (R:US)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMANIUM
Electron Channeling
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
Positron Channeling
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
GERMANIUM ALLOYS
Vacancies
Positron-annihilation measurements of vacancy formation in Ni and Ni(Ge), 8:23941 (R:US)
Vacancy formation in Ni and Ni(Ge), 8:23933 (R:US)
GERMANIUM IONS
Emission Spectra
Spectra of germanium and selenium in the 50-350 A region from the PLT tokamak plasma, 8:24770 (R:US)
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GETTERS
Materials used for the purification of vacuum atmospheres; see also the specific materials.
Design
Design and test results of an in-torus zirconium/aluminum getter pump system for PDX, 8:25211 (J:US)
GIANT CELLS
See TUMOR CELLS
GINNA-1 REACTOR
Reactor Materials
Examination of Tube Samples 21-46 and 28-45 from the Ginna Nuclear Plant for intergranular attack, 8:23500 (R:US)
Steam Generators
Examination of Tube Samples 21-46 and 28-45 from the Ginna Nuclear Plant for intergranular attack, 8:23500 (R:US)
GIROMILL TURBINES
Design
McDonnell 40-kW Giromill wind system: Phase I. Design and analysis. Volume I. Executive summary, 8:23395 (R:US)

GLASS
See also BOROSILICATE GLASS
Fabrication
New method for the preparation of fast-conducting, reactive-glass systems, 8:24029 (R:US)
Leaching
High-temperature leaching of an actinide-bearing, simulated high-level waste glass, 8:23159 (R:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Temperature Effects
High-temperature leaching of an actinide-bearing, simulated high-level waste glass, 8:23159 (R:US)
GLASS INDUSTRY
Heat Recovery
Heat-exchanger needs for recovering waste heat in the glass-making industry. Final report, 8:23861 (R:US)
GLAUBER'S SALT
See SODIUM SULFATES
GLOVEBOXES
GLOVE CHANGE ANALYSIS SYSTEM; glove data base (IBM360; COBOL with TOTAL DBMS (95%) and Assembler (5%)), 8:24091 (R:US)
Cleaning
Compact tritium removal equipment for air cleanup of glove box, 8:25124 (J:US)
Design
Maintenance glove box for sealed master-slave manipulators, 8:24131 (J:US)
Tritium Recovery
New process to remove tritium from glove box atmospheres (TROC (Tritium Removal with Organic Compounds) Process), 8:25125 (J:US)
GLUCOSE
Uptake
Multiphasic kinetics for D-glucose uptake by assemblages of natural marine bacteria, 8:24273 (J:DE)
GLUONS
Bound State
Brookhaven: glueballs, 8:24603 (J:XC)
GLYCINE HISPIDA
Productivity
Approach to modelling vegetation yield reduction from point-source emissions of sulfur dioxide, 8:24400 (R:US)
Effect of NO_2 and SO_2 alone and in combination on the productivity of field-grown soybeans, 8:24406 (R:US)
GLYCOLS
Corrosive Effects
Corrosion problems associated with solar fluid and components, 8:23315 (R:US)
GOLD
Electric Conductivity
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Magnetic Properties
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Superconductivity
Superconductivity in Au-Cr-Au and Ag-Pd-Ag epitaxial metal film sandwiches, 8:23944 (R:US)
GOLD 197 TARGET
Argon 36 Reactions
Indication of preequilibrium emission in deep inelastic Ar + Au collisions, 8:24695 (RA:DE:In German)
Carbon 12 Reactions
Light particle emission from the reaction of ^{13}C with ^{58}Ni and ^{197}Au at 25 MeV per nucleon, 8:24666 (RA:DE:In German, English)
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Fission
Fission fragment angular correlation in 300 MeV ^{20}Ne induced reactions on heavy targets, 8:24686 (RA:DE:In German, English)
Neon 20 Reactions
Balance between light-fragment and fission inclusive cross sections of the ^{20}Ne + ^{197}Au reaction between 7.5 and 20 MeV/nucleon, 8:24653 (RA:DE:In German, English)
Dissociation of 15 MeV/nucleon ^{20}Ne in collisions with ^{197}Au: direct reactions leading to particle-emitting states, 8:24693 (RA:DE:In German, English)
Evidence for non-sequential emission of fast α-particles in deep-inelastic ^{20}Ne + ^{197}Au collisions at 14.5 MeV/nucleon, 8:24694 (RA:DE:In German, English)
Light charged-particle emission from ^{197}Au + ^{20}Ne, 8:24700 (RA:DE:In German, English)
Search for 'fast fission' at the system ^{20}Ne + ^{197}Au, 8:24696 (RA:DE:In German, English)
Proton Reactions
Mass-yield distribution in proton and heavy-ion induced target fragmentation processes, 8:24691 (RA:DE:In German, English)
GOODS AND SERVICES
Energy Accounting
Marginal energy cost of goods and services. Final report, 8:23037 (R:US)
Procurement
Administration of selected support-service contracts, 8:25226 (R:US)
Excessive costs incurred by the Strategic Petroleum Reserve program for rental and other services, 8:23722 (R:US)
GOVERNMENT POLICIES

6th annual report to Congress for fiscal year 1982. Electric and Hybrid Vehicles Program, 8:23886 (R:US)
Market
Mission analysis of second cars to determine electric-vehicle suitability, 8:23883 (R:US)
Power Demand
Regional analysis of potential impacts of electric and hybrid vehicles on electric utilities, 8:23729 (R:US)
Research Programs
6th annual report to Congress for fiscal year 1982. Electric and Hybrid Vehicles Program, 8:23886 (R:US)
Specifications
Mission analysis of second cars to determine electric-vehicle suitability, 8:23883 (R:US)

HYBRID REACTORS
Breeding Blankets
Preconceptual design of a packed fluidized bed blanket for a fission suppressed thorium-fueled CTHR, 8:24976 (J:US)
Design
Fission-suppressed hybrid reactor: the fusion breeder, 8:24838 (R:US)

HYCSOS
See CHEMICAL HEAT PUMPS

HYDRAULIC EQUIPMENT
Data Acquisition Systems
Duty-cycle investigations of continuous miners. Volume I. Final technical report, 8:22974 (R:US)

HYDRAULIC FRACTURES
Crack Propagation
Numerical modeling of massive hydraulic fractures. First annual report, September 1980-August 1981, 8:24497 (R:US)

HYDRAULIC FRACTURING
Comparative Evaluations
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)

HYDRAULIC RAMS
See PUMPS

HYDRAULIC TRANSPORT
Technology Assessment
Engineering approaches to the development of hydraulic transport, 8:24107 (R:US)

HYDRAULIC TURBINES
Technology Assessment
Sample survey of traditional water wheels and small water turbines in nepal: a preliminary report, 8:23242 (R:US)

HYDRIDES
See also HELIUM HYDRIDES
NICKEL HYDRIDES
VANADIUM HYDRIDES
ZIRCONIUM HYDRIDES
Thermochemical Heat Storage
Heat pump apparatus, 8:23360 (P:US)
Uses
Getting metal-hydrides to do what you want them to, 8:23215 (R:US)
Materials engineering of metal hydrides, 8:23216 (R:US)

HYDROCARBONS
See also BENZENE
BENZOPYRENE
POLYCYCLIC AROMATIC HYDROCARBONS
POLYENES
PYRENE
TOLUENE
Equations of State
Most general density-cubic equation of state: application to pure nonpolar fluids, 8:24072 (J:US)
Productivity
New sources for fuel and materials, 8:23282 (J:US)
Removal
Oil shale retorting and combustion system, 8:23083 (P:US)
Thermodynamic Properties
Most general density-cubic equation of state: application to pure nonpolar fluids, 8:24072 (J:US)
Yields
Synthesis of liquids and pipeline gas by Fischer-Tropsch, 8:23221 (R:US)

HYDROCHLORIC ACID
Corrosive Effects
Slow strain rate stress corrosion testing of boiler construction materials in synthetic flue gas at elevated temperatures, 8:23910 (RA:US)

HYDROCRACKING
Catalysts
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)

HYDROCYCLONES
See CYCLONE SEPARATORS

HYDRODYNAMICS
Computer Codes
HEMP; hydrodynamic elasticmagneto plastic flow (CDC7600; FORTRAN IV, LLL CHAT compiler), 8:24567 (R:US)
Mathematical Models
Halo-thermal simulation of the Dead Sea, 8:24503 (R:IL)

HYDROELECTRIC POWER
Monthly energy review, 8:23002 (R:US)
Charges
Unrecovered costs of the headwater benefits program, 8:23742 (R:US)
Cost Recovery
Unrecovered costs of the headwater benefits program, 8:23742 (R:US)
Program Management
Unrecovered costs of the headwater benefits program, 8:23742 (R:US)

HYDROELECTRIC POWER PLANTS
See also LOW-HEAD HYDROELECTRIC POWER PLANTS
MICRO-SCALE HYDROELECTRIC POWER PLANTS
PUMPED STORAGE POWER PLANTS
SMALL-SCALE HYDROELECTRIC POWER PLANTS

Economic Analysis
Investment analysis in electricity supply. Staff working paper, 8:23422 (R:US)
Feasibility Studies
Hydropower from Dutch rivers: a survey of potential and restrictions, 8:23241 (R:US:GE)
Hydropower study. Blackwater Dam, Webster, New Hampshire. Reconnaissance report, 8:23240 (R:US)
Operating Cost
PRODCOST; utility generating cost simulation (IBM360,370,303x; FORTRAN IV (97%) and Assembler (3%)), 8:23403 (R:US)
Unrecovered costs of the headwater benefits program, 8:23742 (R:US)
Optimization
STOPS; power system short-term optimization (IBM303x,360,370; FORTRAN IV), 8:23402 (R:US)
Power Generation
Electric power monthly (For July 1982), 8:23736 (R:US)
Electric power monthly (For November 1981), 8:23731 (R:US)
Electric power monthly (For April 1982), 8:23733 (R:US)
Electric power monthly (For June 1982), 8:23735 (R:US)
Electric power monthly (For May 1982), 8:23734 (R:US)
Electric power monthly (For February 1982), 8:23732 (R:US)
Electric power monthly, 8:23738 (R:US)
Electric power monthly (For October 1982), 8:23737 (R:US)
Electric Power Monthly, 8:23739 (R:US)
Site Selection
Investment analysis in electricity supply. Staff working paper, 8:23422 (R:US)
Technology Assessment
Energy technology data handbook. Vol. 1, 8:23423 (R:DE)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROGEN
Adsorption
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_5O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)
Hydrogen absorption and temperature programmed desorption (TPD) studies of iron- and chromium-substituted ZrV_2, 8:23214 (R:US)
Atom-Molecule Collisions
Applications of classical trajectory techniques to reactive scattering, 8:24566 (J:US)
Multichannel distorted wave Born approximation for reactive scattering, 8:24549 (J:US)
Third body efficiencies for collision-induced dissociation of diatomics. Rate coefficients for $H+H_2 \rightarrow 3H$, 8:24550 (J:US)
Chemical Reaction Kinetics
Quasiclassical trajectory (and variational transition state theory) study of the rates and temperature-dependent activation energies of the reactions $Mu+H_2$ (completely thermal) and H, D, and $Mu+H_2$ (v = 0, j = 2), 8:24079 (J:US)
Chemisorption
Chemisorptive discharge of hydrogen ions: An elementary step in hydrogen corrosion, 8:23954 (R:DE)
Combustion
A model for predicting containment response to hydrogen burns, 8:23654 (J:US)
Hydrogen combustion during degraded core accidents in PWR ice condenser plants, 8:23655 (J:US)
Correlation Functions
New look at correlations in atomic and molecular systems. I. Application of fermion Monte Carlo variational method, 8:24564 (J:US)
Corrosive Effects
Chemisorptive discharge of hydrogen ions: An elementary step in hydrogen corrosion, 8:23954 (R:DE)
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982, 8:24003 (R:US)
Diffusion
Simple theory for maximum H inventory and release: a new transport parameter, 8:24798 (J:NL)
Small-polaron models for the hydrogen-concentration dependence of hydrogen diffusion in Nb, 8:23977 (J:US)
Studies of the diffusion of hydrogen in yttrium, 8:23990 (TJ:US)
Dissociation
Third body efficiencies for collision-induced dissociation of diatomics. Rate coefficients for $H+H_2 \rightarrow 3H$, 8:24550 (J:US)
Emission Spectra
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
Gettering
Materials engineering of metal hydrides, 8:23216 (R:US)
Ion Spectroscopy
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
Ion-Atom Collisions
Differential cross section for electron capture in fast ion-atom collisions, 8:24528 (RA:DE:In German)
Electron capture in ion-atom collisions at intermediate collision energies, 8:24530 (RA:DE:In German)
Molecular binding effects in electron capture in $Li^+ + H$ collisions, 8:24531 (RA:DE:In German)
Radiative charge transfer in collisions of He^{2+} ions and ground-state H atoms, 8:24553 (J:US)
Semiclassical trajectory effects on C^{6+}-H charge-exchange cross sections at low energy, 8:24556 (J:US)
Recovery
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R:US)
Recycling
Dependence of hydrogen recycling on molecular effects in tokamaks, 8:24872 (J:NL)
Experimental observation of a non-constant recombination coefficient - H/Pd(110); possible implications for hydrogen recycle in tokamaks, 8:24900 (J:NL)
Sorption
Diffusion of hydrogen in yttrium, 8:23553 (TJ:US)
Uses
Synopsis of results of the first programme on the production and utilization of hydrogen within the energy R+D programme of the Commission of the European Communities (1975-1979), 8:23212 (B:XE)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN DEUTERIDE
Atom-Molecule Collisions
Applications of classical trajectory techniques to reactive scattering, 8:24566 (J:US)

HYDROGEN FUEL CELLS
Anodes
20 kW-fuel cell units by compact assembly. Pt. 4, 8:23787 (R:DE:In German)
Cathodes
20 kW-fuel cell units by compact assembly. Pt. 4, 8:23787 (R:DE:In German)
Cost
20 kW-fuel cell units of compact assembly. Pt. 5, 8:23788 (R:DE:In German)
Design
20 kW fuel cell units of compact design. Pt. 1, 2, 8:23785 (R:DE:In German)
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R:US)
Feasibility Studies
Study, design, and development program for a phosphoric acid fuel cell and waste hydrogen utilization. Final technical report, June 1, 1976-May 31,1978, 8:23790 (R:US)
Manufacturing
20 kW fuel cell units of compact design. Pt. 1, 2, 8:23785 (R:DE:In German)
20 kW fuel cell units of compact assembly. Pt. 3, 8:23786 (R:DE:In German)

20 kW-fuel cell units of compact assembly. Pt. 5, 8:23788 (R:DE:In German)
Performance Testing
20 kW fuel cell units of compact design. Pt. 1, 2, 8:23785 (R:DE:In German)
HYDROGEN HYDROXIDES
See WATER
HYDROGEN IONS 1 PLUS
For H_1^+ ions.
Ion-Atom Collisions
Differential cross section for electron capture in fast ion-atom collisions, 8:24528 (RA:DE:In German)
Electron capture in ion-atom collisions at intermediate collision energies, 8:24530 (RA:DE:In German)
Observation of the recoil effect on the K-shell excitation probabilities in ion-atom collisions, 8:24543 (RA:DE:In German)
Second Born calculation for electron capture, 8:24529 (RA:DE:In German, English)
Ion-Ion Collisions
Electron capture in ion-atom collisions at intermediate collision energies, 8:24530 (RA:DE:In German)
HYDROGEN IONS 2 PLUS
For H_2^+ ions.
Emission Spectra
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
Ion Spectroscopy
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
Ion-Molecule Collisions
Reactions of ions with atomic and molecular free radicals. Final report, May 1, 1975-November 30, 1982, 8:24522 (R:US)
Photon-Ion Collisions
UV-laser photofragmentation of a 2-MeV H_2^+ beam, 8:24515 (R:US)
HYDROGEN IONS 3 PLUS
For H_3^+ ions.
Emission Spectra
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
Ion Spectroscopy
Optical observations of molecular dissociation in thin foils, 8:24514 (R:US)
HYDROGEN ISOTOPES
See also DEUTERIUM
TRITIUM
Isotopic Exchange
Extended local mixing model for hydrogen retention and isotope exchange, 8:24797 (J:NL)
HYDROGEN NITRATES
See NITRIC ACID
HYDROGEN PRODUCTION
Biosynthesis
Photosynthetic hydrogen evolution by chloroplasts and algae and on a chloroplast battery, 8:23209 (R:US)
Electrolysis
An operating high temperature (1000°C) electrolysis demonstration unit, 8:23213 (J:US)
Development and parametric testing of alkaline water electrolysis cells for hydrogen production based on inorganic-membrane-electroylet technology. Final report, 8:23206 (R:US)
Electrolyzer module which uses bipolar electrodes with very high catalytic activity. Final report, 8:23204 (R:XE:FR)
High temperature water vapor electrolysis (HOT ELLY), 8:23203 (R:DE:In German)
Production of hydrogen by electrolysis of water under at medium temperature. Final report, 8:23205 (R:XE)
Synopsis of results of the first programme on the production and utilization of hydrogen within the energy R+D programme of the Commission of the European Communities (1975-1979), 8:23212 (B:XE)
Photochemical Reactions
Photocatalytic production of hydrogen from water by a p- and n-type polycrystalline iron oxide assembly, 8:23211 (J:US)
Photocatalytic production of hydrogen from water, using sunlight. Final report, 8:23207 (R:US)
Photochemical dissociation of water adsorbed in artificial membranes made from phyllosilicates. Final report, 8:23208 (R:US)
Photoelectrolysis
Conversion and chemical storage of solar energy in a photoelectrochemical cell. Final report, 8:23275 (R:US)
Steam Reformer Processes
20 kW-fuel cell units of compact assembly. Pt. 5, 8:23788 (R:DE:In German)
Thermochemical Processes
Synopsis of results of the first programme on the production and utilization of hydrogen within the energy R+D programme of the Commission of the European Communities (1975-1979), 8:23212 (B:XE)
HYDROGEN STORAGE
Synopsis of results of the first programme on the production and utilization of hydrogen within the energy R+D programme of the Commission of the European Communities (1975-1979), 8:23212 (B:XE)
Hydrides
Getting metal-hydrides to do what you want them to, 8:23215 (R:US)
Hydrogen absorption and temperature programmed desorption (TPD) studies of iron- and chromium-substituted ZrV_2, 8:23214 (R:US)
Materials engineering of metal hydrides, 8:23216 (R:US)
HYDROGEN SULFATES
See SULFURIC ACID
HYDROGEN SULFIDES
Removal
Zimpro's biophysical-treatment-system stress testing of the H-COAL wastewater, 8:22950 (R:US)
HYDROGENATION
Catalysts
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Optimization
Optimization of combination of coal hydrogenation, Fischer-Tropsch synthesis and gasification for the production of motor fuels, 8:22914 (R:DE:In German)
HYDROLOGY
Meetings
Proceedings of the workshop on nuclear techniques in hydrology (Lead abstract), 8:24483 (R:IN)
HYDROXYBENZENE

HYPERNUCLEI
Binding Energy
Supernuclei, supernuclear matter & SU(4) symmetry, 8:24616 (RA:US)
Energy Levels
Theoretical nuclear reaction and structure studies using kaons and photons. Progress report, 1 February 1982-31 January 1983, 8:24641 (R:US)
OBE Model
Study of the T = 3/2 ΣN interaction, 8:24617 (RA:US)
Particle Decay
Λ and Σ hypernuclear physics, 8:24594 (RA:US)
Particle Production
Λ and Σ hypernuclear physics, 8:24594 (RA:US)
Preliminary report on an experiment to observe Σ hypernuclei in the 1p shell nuclei, 8:24595 (RA:US)

I-BEAM TYPE REACTORS
Beam Transport
Transport of light ion beams in plasma channels, 8:25135 (J:US)
First Wall
Gas dynamics and heat transfer phenomena in liquid metal ICF reactor first surfaces, 8:25138 (J:US)
Low density cavity gas fireball dynamics in the light ion beam target development facility, 8:24920 (J:US)
Heavy Ion Accelerators
Development of the rf linear accelerator test bed for heavy ion fusion, 8:25139 (J:US)
Development of the rf linear accelerator test bed for heavy-ion fusion, 8:24822 (R:US)
Linear Accelerators
Development of the rf linear accelerator test bed for heavy ion fusion, 8:25139 (J:US)
Development of the rf linear accelerator test bed for heavy-ion fusion, 8:24822 (R:US)
Pressure Vessels
Mechanical response of cavity tube banks in heavy ion beam fusion reactors, 8:25204 (J:US)
ICES
Computerized Simulation
TDIST2; community energy consumption analysis (IBM370,303x; FORTRAN IV, IBM FORTRAN G compiler), 8:23872 (R:US)
ICR HEATING
Control Systems
EBT-P plasma heating system instrumentation and control design, 8:25078 (J:US)
Electronic Equipment
Design of a 9 inch stub tuner for PLT icrh operation, 8:25096 (J:US)
Microwave Amplifiers
Conception, implementation and performance of the high power, high frequency amplifier for icrh at Fontenay-aux-Roses, France, 8:24925 (J:US)
Power Supplies
1.2 megawatt, 800 MHz rf generator for lower hybrid resonance heating, 8:25097 (J:US)
IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Hot Cells
TMI-2 core-examination program: INEL facilities readiness study, 8:23607 (R:US)

Alfven Waves
Kinetic theory of Alfven waves, 8:24762 (R:US)
Correlation Functions
Integral representation for geometric optics solutions, 8:24781 (J:US)
Kinetic Equations
Kinetic theory of Alfven waves, 8:24762 (R:US)
Radiations
Integral representation for geometric optics solutions, 8:24781 (J:US)
INPUT-OUTPUT ANALYSIS
Disaggregation, input-output analysis, and energy impacts, 8:23685 (R:US)
IN-SERVICE INSPECTION
Nondestructive evaluation program: progress in 1982 (PWR; BWR), 8:23464 (R:US)
IN-SITU COMBUSTION
Field Tests
In-situ combustion project at Bartlett, Kansas. Final report, 8:23016 (R:US)
IN-SITU GASIFICATION
Economics
Underground coal gasification product quality parameters, 8:22940 (J:US)
Environmental Impacts
Effect of underground coal gasification on groundwater. Final report, 8:22960 (R:IT)
Field Tests
Depositional environments, subsurface stratigraphy, and post-burn characterization of the Paleocene-Eocene Hanna Formation at the Hanna, Wyoming underground coal-gasification site: Hanna II Phase 1 experiment (Hanna II; post mortem examination), 8:22923 (R:US)
Underground coal gasification product quality parameters, 8:22940 (J:US)
IN-SITU RETORTING
Air Pollution
Atmospheric resource research, 8:23090 (RA:US)
Environmental Impacts
Ecological resource research, 8:23092 (RA:US)
Environmental research plan for the Geokinetics Inc. investigation of the horizontal in-situ oil-shale-retorting process. Research record, 8:23089 (R:US)
Land Reclamation
Ecological resource research, 8:23092 (RA:US)
Permits
Environmental permits, 8:23095 (RA:US)
Research Programs
Environmental research plan for the Geokinetics Inc. investigation of the horizontal in-situ oil-shale-retorting process. Research record, 8:23089 (R:US)
Risk Assessment
Risk assessment and mitigation, 8:23094 (RA:US)
Socio-Economic Factors
Cultural-economic resource research, 8:23093 (RA:US)
Water Pollution
Hydrologic resource research, 8:23091 (RA:US)
INSOLATION
Calculation Methods
Estimates of the daily solar radiation on orientated and inclined receiver surfaces. Final report, 8:23247 (R:US:FR)
Climates
Environmental data for sites in the National Solar Data Network, 8:23249 (R:US)
Data Compilation
Environmental data for sites in the National Solar Data Network, 8:23251 (R:US)
Environmental data for sites in the National Solar Data Network, 8:23248 (R:US)
Environmental data for sites in the National Solar Data Network, 8:23250 (R:US)
INSTRUMENTS (MEASURING)
See MEASURING INSTRUMENTS
INSULATING LIMITERS
See LIMITERS
INSULATING OILS
Chemical Properties
Reclamation of transformer oils containing PCBs by the Sunohio PCBX Process. Final report, 8:23038 (R:US)
Electrical Properties
Reclamation of transformer oils containing PCBs by the Sunohio PCBX Process. Final report, 8:23038 (R:US)
Pumping
Electrohydrodynamic pumping in cable pipes. Final report, 8:23435 (R:US)
Recycling
Reclamation of transformer oils containing PCBs by the Sunohio PCBX Process. Final report, 8:23038 (R:US)
INSULATION (ELECTRICAL)
See ELECTRICAL INSULATION
INSULATION (THERMAL)
See THERMAL INSULATION
INSULATORS (ELECTRICAL)

INTERCONNECTED POWER SYSTEMS
Control
Hierarchical stability and alert state steering control of interconnected power systems, 8:23441 (J:US)
Load Management
Assessment of load-frequency-control impacts caused by small wind turbines, 8:23393 (R:US)
Oscillations
Phase II: frequency domain analysis of low-frequency oscillations in large electric power systems. Volume 1. Basic concepts, mathematical models, and computing methods. Final report, 8:23434 (R:US)
Reliability
US-Canadian electricity trade, 8:23740 (R:US)
Stability
Hierarchical stability and alert state steering control of interconnected power systems, 8:23441 (J:US)
Phase II: frequency domain analysis of low-frequency oscillations in large electric power systems. Volume 1. Basic concepts, mathematical models, and computing methods. Final report, 8:23434 (R:US)
Systems Analysis
Phase II: frequency domain analysis of low-frequency oscillations in large electric power systems. Volume 1. Basic concepts, mathematical models, and computing methods. Final report, 8:23434 (R:US)
Wind Turbines
Assessment of load-frequency-control impacts caused by small wind turbines, 8:23393 (R:US)
Assessment of distributed wind-power systems, 8:23392 (R:US)
Assessment of distributed wind-power systems. Final report, 8:23391 (R:US)
INTERFEROMETERS
Performance
Velocity perturbation of a flyer approaching a rigid impermeable barrier and the transmitted pressure pulse, 8:24214 (R:US)

INTERLABORATORY COMPARISONS
Research Programs
In vivo measurements of bone-seeking radionuclides. Progress report, 1981-1982 (Lead abstract), 8:24197 (R:US)
INTERNAL COMBUSTION ENGINES
See also DIESEL ENGINES
Research Programs
Sandia technology, 8:23882 (R:US)
INTERNAL IRRADIATION
Risk Assessment
Risk estimates for bone, 8:24363 (R:US)
INTERNATIONAL ENERGY AGENCY
Energy Policy
International Energy Agency and its growing task, 8:23714 (R:DE:In German)
Energy Supplies

INTERNATIONAL TOKAMAK REACTOR
See INTOR TOKAMAK
INTOR TOKAMAK
International Tokamak Reactor.
Breeding Blankets
Conceptual design of tritium breeding blanket for INTOR, 8:24956 (J:US)
Neutronic analysis of graphite-moderated solid breeder design for INTOR, 8:24824 (R:US)
Neutronics analysis of graphite-moderated solid breeder blanket designs for INTOR, 8:24957 (J:US)
Design
International tokamak reactor conceptual design overview, 8:25037 (J:US)
INTOR physics, 8:25038 (J:US)
Overview of INTOR nuclear systems, 8:24955 (J:US)
Divertors
Neutral gas blanket effects in a gaseous divertor, 8:24858 (J:NL)
First Wall
Conceptual design of the INTOR first wall system, 8:25173 (J:US)
Conceptual design of the INTOR first-wall system, 8:24823 (R:US)
Global estimates of impurity levels and wall erosion in INTOR, 8:24869 (J:NL)
INTOR first wall erosion during plasma disruption, 8:24964 (J:US)
Impurities
Global estimates of impurity levels and wall erosion in INTOR, 8:24869 (J:NL)
Magnet Coils
Magnet design for INTOR, 8:25039 (J:US)
Materials Testing
Important material considerations in INTOR, 8:24820 (R:US)
Poloidal Divertors
U.S. INTOR divertor design, 8:25174 (J:US)
Power Supplies
INTOR power handling and conversion, 8:25071 (J:US)
Radiation Protection
INTOR radiation shielding for personnel access, 8:25175 (J:US)
Shielding
INTOR radiation shielding for personnel access, 8:25175 (J:US)
Specifications
Key features of INTOR nuclear systems, 8:24819 (R:US)
Superconducting Magnets
Superconducting poloidal field coil studies for INTOR, 8:25046 (J:US)
IODIDES
See also COPPER IODIDES
SILVER IODIDES
SODIUM IODIDES
Isotachophoresis
Isotachophoresis, 8:24050 (R:US)
IODINE
Corrosive Effects
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
Thermodynamic assessment of in-reactor iodine SCC of zircaloy, 8:23982 (J:NL)
IODINE 129
Adsorption
Iodine-fixation studies at the Pacific Northwest Laboratory, 8:23165 (R:US)
IODINE 131
Radiation Monitoring
Mechanical-reliability evaluation of a proposed emergency-response radioiodine air sampler, 8:24249 (R:US)
IODINE IODIDES
See IODINE
IODODEOXYURIDINE
Radiosensitivity Effects
Environmental insults to DNA, 8:24413 (RA:US)
ION ACOUSTIC WAVES
Non-dispersive ion waves
Wave Propagation
Nonlinear electrostatic waves: oblique propagation, 8:24800 (J:GB)
ION BEAM TYPE REACTORS
See I-BEAM TYPE REACTORS
ION BEAMS
Beam Transport
Transport of light ion beams in plasma channels, 8:25135 (J:US)
Focusing
Plasma wake of mesosonic conducting bodies. Pt. 1. An experimental parametric study of ion focusing by the plasma sheath, 8:24916 (J:GB)
Plasma Sheath
Plasma wake of mesosonic conducting bodies. Pt. 1. An experimental parametric study of ion focusing by the plasma sheath, 8:24916 (J:GB)
ION BLOCKING
See ION CHANNELING
ION CHANNELING
Coherent Radiation
Coherent absorption and emission processes of energetic particles penetrating crystals, 8:24731 (BA:US)
Photon Emission
Coherent absorption and emission processes of energetic particles penetrating crystals, 8:24731 (BA:US)
ION COLLISIONS
See also ELECTRON-ION COLLISIONS
ION-ATOM COLLISIONS
ION-ION COLLISIONS
PHOTON-ION COLLISIONS
Electron Capture
Charge state determination of fast ions in solids using radiative electron capture (REC), 8:24538 (RA:DE:In German)
Electron capture into Rydberg states of fast ion beams following gas and foil excitation, 8:24542 (RA:DE:In German, English)
Laser Spectroscopy
Static-mode laser-fluorescence spectroscopy: a new technique for studying excitation mechanisms in particle-surface collisions, 8:24521 (R:US)
ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING
ION DRIFT
Magnetic Field Ripples
Effects of toroidal field ripple on suprathermal ions in tokamak plasmas, 8:24803 (J:GB)
Thermal Equilibrium
Effects of toroidal field ripple on suprathermal ions in tokamak plasmas, 8:24803 (J:GB)

ION IMPLANTATION
Radiation Effects
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
ION SOURCES
Design
Prototype ion source for JT-60 NBI, 8:25109 (J:US)
Fabrication
Development, fabrication and tests of the periplasmatron ion sources for ASDEX, 8:25088 (J:US)
Technology Assessment
Status and trends in the development and application of positive-ion-based neutral injectors, 8:25112 (J:US)
Test Facilities
Large source test stand for H/sup -/(D/sup -/) ion source, 8:24928 (J:US)
Testing
Development, fabrication and tests of the periplasmatron ion sources for ASDEX, 8:25088 (J:US)
ION SPECTROSCOPY
Magnetic Spectrometers
Spectroscopy of neutron-rich nuclei via particle-γ-coincidences with a magnetic spectrograph, 8:24202 (RA:DE:In German)
ION-ATOM COLLISIONS
Coulomb Ionization
Analytic form factors for Coulomb ionization, 8:24533 (RA:DE:In German)
Inelastic Scattering
Calculation of KL-vacancy sharing in asymmetric ion-atom collisions, 8:24541 (RA:DE:In German)
IONIC REACTIONS
See IONS
ION-ION COLLISIONS
Deformation
Molecular dipole deformation as a collective variable in slow atomic collisions, 8:24532 (RA:DE:In German)
IONIZATION CALORIMETERS
See SHOWER COUNTERS
IONIZATION GAGES
Design
Very small ionization pressure gauge, 8:24144 (R:US)
IONOSPHERE
Computerized Simulation
Computer model of chemistry and dynamics of the mesosphere, thermosphere, and ionosphere, 8:24508 (R:US)
IONS
Ions in solutions are indexed as compounds; ions in gases by the precoordinated descriptor consisting of the element name and the term ions; ions in beams by assigning either the specific name if available, e.g. ARGON 40 BEAMS
See also ARGON IONS
BROMINE IONS

Depth Dose Distributions
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
Range
COREL;RASE4;DAMG2; ion implantation deposition (CDC6600,7600; FORTRAN IV. The programs, originally written for the FUN compiler, were translated by the NESC for compilation under FTN.), 8:24718 (R:US)
IONS (MOLECULAR)
See MOLECULAR IONS
IPNS-I SYNCHROTRON
Intense Pulsed Neutron Source.
Neutron Diffractometers
Data acquisition system for the neutron scattering instruments at the intense pulsed neutron source, 8:24172 (R:US)
IPNS distributed-processing data-acquisition system, 8:24173 (R:US)
Targets
Evaluation of structural integrity of IPNS-I and ZING-P' targets, 8:24171 (R:US)
IRIDIUM
Agglomeration
Structure of bimetallic clusters. Extended x-ray absorption fine structure (EXAFS) studies of Ir—Rh clusters, 8:23972 (J:US)
IRON
Catalytic Effects
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Synthesis of liquids and pipeline gas by Fischer-Tropsch (Taconite + K; iron sheathed taconite; taconite + Cu + K), 8:23221 (R:US)
Corrosion Protection
Use of infrared and Raman spectroscopy to study corrosion inhibitors on metal surfaces, 8:23901 (RA:US)
Environmental Exposure Pathway
Lead and iron status of breast and formula-fed infants, 8:24468 (J:US)
Metabolism
Lead and iron status of breast and formula-fed infants, 8:24468 (J:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
IRON 56 REACTIONS
Inclusive Interactions
Emission of light charged particles in the reaction ^{165}Ho + ^{56}Fe, 8:24685 (RA:DE:In German, English)
IRON 56 TARGET
Xenon 132 Reactions
No need for a new damping mechanism in the system ^{132}Xe + ^{56}Fe at energies below 7.12 MeV/ν, 8:24673 (RA:DE:In German, English)
IRON ALLOYS
See also HAYNES 188 ALLOY
INCONEL 600
INCONEL 625
IRON BASE ALLOYS
Corrosion Resistance
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Crystallization
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)
Electrochemical Corrosion
Corrosion behavior of high density tungsten alloys, 8:23899 (RA:US)
Moessbauer Effect
Moessbauer spectrometry study of Fe-Ni-X alloys, 8:23970 (R:US)
Phase Studies
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)
IRON BASE ALLOYS
See also CAST IRON
STEELS
Ductility
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)

Embrittlement
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)
Hydrogen Embrittlement
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)
Tensile Properties
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)

IRON HYDROXIDES
Reduction
In-situ studies of reduction reactions of weathering steel surface films by Raman spectroscopy, 8:23900 (RA:US)

IRON IONS
Electron-Ion Collisions
Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence, 8:24554 (J:US)

IRON OXIDES
Catalytic Effects
Photocatalytic production of hydrogen from water by a p- and n-type polycrystalline iron oxide assembly, 8:23211 (J:US)
Self-Diffusion
Diffusion mechanisms in transition-metal oxides, 8:23995 (R:US)
Sensible Heat Storage
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)
Sorptive Properties
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_2O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)
Thermodynamic Properties
Evaluation of thermal-energy storage-materials for advanced compressed-air energy-storage systems, 8:23666 (R:US)

IRON-NICKEL BATTERIES
Research Programs
Status of improved lead-acid, nickel/iron, and nickel/zinc batteries being developed under DOE's electric vehicle battery program, 8:23676 (R:US)

IRRADIATION DEVICES
Transport
Sewage Solids Irradiator Transportation System (SSITS) cask: preliminary design description, 8:24113 (R:US)

IRRADIATION RIGS
See IRRADIATION DEVICES

IRRIGATION
1981 Winter Meeting - American Society of Agricultural Engineers, 8:23868 (J:US)

ISOTACHOPHORESIS
Uses
Isotachophoresis, 8:24050 (R:US)

ISOTOPE ENRICHMENT
See ISOTOPE SEPARATION

ISOTOPE SEPARATION
For separation of isotopes of the same element only.
Sources of separated isotopes for nuclear targetry, 8:23200 (BA:US)
Palladium Alloys
Design study of fuel circulating system using Pd alloy membrane isotope separation method, 8:23199 (RA:JP)

ISOTOPIC SEPARATION
See ISOTOPE SEPARATION

ISX TOKAMAK
Gettering
Gettering in ISX-B, 8:24879 (J:NL)
Superconducting Magnets
Superconducting ohmic heating solenoid concept for ISX-C, 8:25014 (J:US)

ITALY
Earthquake Magnitude
Magnitude readings of the Lucano-Campano earthquakes of November 23, 1980 as recorded by accelerometers, 8:24487 (R:IT:IT)
Earthquakes
Magnitude readings of the Lucano-Campano earthquakes of November 23, 1980 as recorded by accelerometers, 8:24487 (R:IT:IT)
Geologic Models
Seismische studien zur bestimmung der krustenstruktur im bereich der geothermischen anomalie der toskana (seismic studies for defining the structure of the crust within the area of the geothermal anomaly of tuscany). Final report, 8:23374 (R:US)
Seismic Surveys
Seismische studien zur bestimmung der krustenstruktur im bereich der geothermischen anomalie der toskana (seismic studies for defining the structure of the crust within the area of the geothermal anomaly of tuscany). Final report, 8:23374 (R:US)
Seismicity
Observation of several large earthquakes with an eastern epicenter. The macroseismic region in Italy of the 1903 Greek earthquake, 8:24488 (R:IT:IT)

JET REACTORS
Beam Neutralization
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Cryopumps
Cryopumps for JET - design of a large scale system of open configuration for high specific pumping speed, 8:25203 (J:US)
First Wall
Deuterium trapping in low-Z coatings, 8:24898 (J:NL)
High-Frequency Heating
Mechanical aspects of the design of a lower hybrid frequency grill launcher for the Joint European Torus (J.E.T.), 8:25094 (J:US)
Ion Temperature
Proposal for time-resolved ion temperature measurements by means of Rutherford scattering of the JET heating beams, 8:24773 (R:NL)
Joule Heating
JET ohmic heating circuit, 8:25061 (J:US)
Neutral Atom Beam Injection
Status of the JET neutral injection system, 8:25108 (J:US)
Neutral Beam Sources
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Engineering design and manufacturing of prototype neutral injector for JET, 8:25115 (J:US)
Status of the JET neutral injection system, 8:25108 (J:US)
Plasma Diagnostics
Proposal for time-resolved ion temperature measurements by means of Rutherford scattering of the JET heating beams, 8:24773 (R:NL)
Power Supplies
Design, fabrication and erection of flywheel-generator-convertors for the JET tokamak, 8:25060 (J:US)
JET ohmic heating circuit, 8:25061 (J:US)
Superconducting Magnets
Status of the magnet systems and highlight of the main assembly problems, 8:25032 (J:US)

JIPP STELLARATOR
Limiters
All TiC coated limiter experiment in the JIPP T-II tokamak, 8:24860 (J:NL)
JT-60 REACTORS
Coatings
Thermal shock testing of low-Z coatings for JT-60, 8:24906 (J:NL)
Computerized Control Systems
System design of ZENKEI, the central control system for JT-60, 8:25177 (J:US)
Control Systems
Design concept of real-time plasma control for JT-60, 8:25179 (J:US)
Data Processing
Data processing system for JT-60, 8:25198 (J:US)
First Wall
Development of low-Z surface coatings for JT-60 first wall, 8:24908 (J:NL)
Fatigue data of molybdenum, 8:25164 (J:US)
Ion Sources
Prototype ion source for JT-60 NBI, 8:25109 (J:US)
Magnet Coils
Fatigue design of the poloidal field coil for JT-60 tokamak machine, 8:25000 (J:US)
Load tests of a large coil, 8:25001 (J:US)
Nonlinear stress analysis of the poloidal field coil for JT-60 tokamak machine, 8:24999 (J:US)
Neutral Atom Beam Injection
Construction of prototype injector unit for JT-60, 8:25110 (J:US)
Neutral Beam Sources
Construction of prototype injector unit for JT-60, 8:25110 (J:US)
Vacuum Systems
Full-scale model of cooling and heating system for JT-60 vacuum vessel, 8:25212 (J:US)

K

K02

Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)
Photoionization
Resonance ionization spectroscopy schemes for Ar, Kr and Xe, 8:24559 (J:NL)
KRYPTON 79
Nuclear Quadrupole Resonance
Quadrupole interaction of ^{79}Kr in zinc at high temperatures, 8:23956 (RA:DE:In German)

KRYPTON 84 REACTIONS
Inelastic Scattering
Multiple Coulomb excitation of very heavy systems within the classical S-matrix theory, 8:24709 (RA:DE:In German, English)
KRYPTON 85
Environmental Transport
Statistical performance of several mesoscale atmospheric dispersion models, 8:24250 (J:US)
Inventories
Byproduct inventories, 8:23171 (R:US)
Recovery
Potential for beneficial use of krypton-85, 8:23170 (R:US)
Technology for recovery of byproducts, 8:23173 (R:US)
Uses
Potential for beneficial use of krypton-85, 8:23170 (R:US)
KRYPTON 86 REACTIONS
Deep Inelastic Heavy Ion Reactions
Bombarding energy dependence of angular momentum transfer in deep inelastic collisions, 8:24690 (J:NL)
Dynamical coupling of relative motion, deformations and charge transfer within a Fokker-Planck equation for deep inleastic collisions, 8:24682 (RA:DE:In German, English)
Role of deformation and shell effects in deep inelastic collisions of $^{86}Kr + {}^{88}Sr, {}^{90}Zr, {}^{92}Mo$ at energies close to the Coulomb barrier, 8:24667 (RA:DE:In German, English)
Heavy Ion Reactions
Global increase of near- and below-barrier fusion for heavier systems, 8:24664 (RA:DE:In German, English)
KRYPTON IONS
Electron-Ion Collisions
Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence, 8:24554 (J:US)
Ion-Atom Collisions
Charge distributions of recoil ions, 8:24537 (RA:DE:In German)
KUHFR REACTOR
Fuel Cycle
US RERTR program, its fuel-development activities, and application in the KUHFR, 8:23575 (R:US)
Reactor Cores
US RERTR program, its fuel-development activities, and application in the KUHFR, 8:23575 (R:US)
Reactor Kinetics
US RERTR program, its fuel-development activities, and application in the KUHFR, 8:23575 (R:US)
KUPFFER CELLS

Acidification
Distribution and characteristics of surficial geologic materials in the ILWAS watershed, 8:24282 (RA:US)
Integrated lake-watershed acidification study: proceedings of the ILWAS annual review conference (Lead abstract), 8:24280 (R:US)
Lake acidification during spring snowmelt: processes and causes, 8:24285 (RA:US)
Lysimeter and soil chemistry studies, 8:24501 (RA:US)
Mineralogy of the ILWAS lake-watering, 8:24499 (RA:US)
Overview of the integrated lake-water acidification study (ILWAS), 8:24281 (RA:US)
Temporal trends in the pH of Woods, Sagamore, and Panther Lakes as determined by an analysis of diatom population, 8:24287 (RA:US)
Geochemical Surveys
Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R:US)
Water Chemistry
Lake acidification during spring snowmelt: processes and causes, 8:24285 (RA:US)
LAMPF II SYNCHROTRON
Meetings
Proceedings of the workshop on LAMPF II synchrotron, 8:24183 (R:US)
LAMPF LINAC
Remote Handling Equipment
History of remote handling at LAMPF, 8:24192 (J:US)
Research Programs
Speculative ten-year plan for nuclear physics at LAMPF, 8:24596 (RA:US)
LAND FILLS
See SANITARY LANDFILLS
LAND POLLUTION
Environmental Transport
OPTRM; hydrologic transport with optimization (IBM360,370; FORTRAN IV (96%) AND BAL (4%)), 8:24276 (R:US)
LANDFILLS
See SANITARY LANDFILLS
LANDFORMS
See GEOMORPHOLOGY
LANGMUIR OSCILLATIONS
See PLASMA WAVES
LANTHANIDES
See RARE EARTHS
LANTHANUM ALLOYS
Fermi Level
Fermi-surface properties of $CeSn_3$ and related compounds ($LaSn_3$), 8:23947 (R:US)
LANTHANUM SULFIDES
Superconductivity
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)
Transition Temperature
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)
LARAMIE ENERGY TECHNOLOGY CENTER
Contract Management
Dissemination of technical information from the oil-shale program, 8:23079 (R:US)
Program Management
Financial management in the oil-shale program, 8:23080 (R:US)
Project management in the oil shale program, 8:23078 (R:US)
LARGE COIL PROGRAM
Engineering, testing and manufacturing the general dynamics test coil for the Large Coil Program - an update, 8:25045 (J:US)
Latest status of the Japanese LCT coil and the domestic test facility, 8:25053 (J:US)
Manufacture of 16,000 amp superconducting conductor for the tokamak toroidal field coil program, 8:25019 (J:US)
Pool boiling superconducting coils for the Large Coil Task, 8:25036 (J:US)
Production experience: the Nb/sub 3/Sn forced flow conductor for the Large Coil Program, 8:25049 (J:US)
Progress renort on the tandem contribution to the IEA Large Coil Task, 8:25055 (J:US)
Results of the cooldown analysis of the Swiss LCT coil, 8:25054 (J:US)
Cooling Systems
Two-phase helium-IV quench analysis for superconducting magnets, 8:25010 (J:US)

Superconducting Magnets
General Dynamics superconducting magnet for the Large Coil Program: a progress report, 8:24119 (J:US)
Thermal Testing
Cryogenic voltage withstand and heat transfer tests for the General Electric large coil turn heaters, 8:25009 (J:US)

LARGE INTESTINE
Biomedical Radiography
The radiographic examination of the colon, 8:24344 (R:US)

LASER FUSION REACTORS
Electron beam transport through the atmosphere in reduced-density, current-carrying channels, 8:25153 (J:US)
First Wall
Liquid jet experiments: relevance to inertial confinement fusion reactors, 8:25156 (J:US)
Inertial Confinement
Liquid jet experiments: relevance to inertial confinement fusion reactors, 8:25156 (J:US)
Nuclear Pumping
Nuclear pumping of O/sub 2/(/sup 1//delta/) for laser fusion reactors, 8:25154 (J:US)

LASER IMPLOSIONS
Electron Drift
Transport effects with hot electrons in laser fusion. Final report, October 1, 1981-February 28, 1983, 8:24826 (R:US)

LASER RADIATION
Multiple Scattering
Multiple-scattering analysis of laser-beam propagation in the atmosphere and through obscurants, 8:24726 (R:US)
Wave Propagation
Multiple-scattering analysis of laser-beam propagation in the atmosphere and through obscurants, 8:24726 (R:US)

LASER SPECTROSCOPY
Accelerator Facilities
On-line laser spectroscopy with a cooled He-jet transport system, 8:24174 (R:US)
Fluorescence
Static-mode laser-fluorescence spectroscopy: a new technique for studying excitation mechanisms in particle-surface collisions, 8:24521 (R:US)

LASER-PRODUCED PLASMA
Electron Drift
Transport effects with hot electrons in laser fusion. Final report, October 1, 1981-February 28, 1983, 8:24826 (R:US)
Magnetic Fields
Some nonlinear estimates for lateral propagation of self-generated B fields, 8:24764 (R:US)
X-Ray Spectrometers
Laser fusion x-ray measurements, 8:24843 (RA:US)

LASERS
Light Amplification by Stimulated Emission of Radiation.
See also FREE ELECTRON LASERS
GAS LASERS
SOLID STATE LASERS
X-RAY LASERS
Diagnostic Techniques
Nova alignment and laser diagnostics systems - 1, 8:25146 (J:US)

LASL
Information Dissemination
Public access to classified reports at the Los Alamos Scientific Laboratory, 8:25282 (R:US)
Nuclear Materials Management
Operational advanced materials control and accountability system, 8:23198 (J:US)

LATENT HEAT STORAGE
Comparative Evaluations
Latent heat storage for solar energy systems, 8:23357 (R:XE:GE)

LATHES
Control Systems
BXAMER; hustler two-axis lathe APT postprocessor (CDC CYBER174,175; FORTRAN IV (greater than 99%) and COMPASS (less than 1%)), 8:24097 (R:US)
OKUMA; OKUMA two-axis lathe APT postprocessor (CDC CYBER174,175; FORTRAN IV (greater than 99%) and COMPASS (less than 1%)), 8:24098 (R:US)

LATTICE FIELD THEORY
Monte Carlo Method
U(3) four-dimensional lattice gauge theory and Monte Carlo calculations, 8:24635 (J:NL)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LATTICES (REACTOR)
See REACTOR LATTICES

LAWRENCE LIVERMORE LABORATORY
Program Management
Costly delays in the purchase of a scientific computer for the Solar Energy Research Institute, 8:25227 (R:US)

LAWS
Implementation
6th annual report to Congress for fiscal year 1982. Electric and Hybrid Vehicles Program, 8:23886 (R:US)

LAWSUITS
Document Destruction
Investigation of questions of possible document destruction by the Office of Special Counsel for Compliance, 8:25225 (R:US)

LEACHATES
Chemical Analysis
Hydrologic resource research, 8:23091 (RA:US)
Chemical Composition
Comparison of solid wastes from coal combustion and pilot coal-gasification plants. Final report, 8:22955 (R:US)

LEAD
Antiproton Reactions
Effects of strong attraction in antiproton-nucleus scattering, 8:24621 (RA:US)
Biological Effects
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Body Burden
Smoking, infant birthweight and lead burden in developing children, 8:24459 (J:US)
Ecological Concentration
Analysis of tapwater lead concentration in homes of children with undue body lead burden, 8:24300 (J:US)
Cadmium and lead contaminated soils in some British metal mining areas, 8:24260 (J:US)
Environmental pollution control at the AMAX-Homestake lead smelter, 8:24245 (J:US)
Heavy metals in the environs of a smelter, 8:24292 (J:US)
Role of soil ingestion in the intake of metals by livestock, 8:24474 (J:US)
Environmental Exposure Pathway
Lead and iron status of breast and formula-fed infants, 8:24468 (J:US)
Role of soil ingestion in the intake of metals by livestock, 8:24474 (J:US)
Metabolism
Analysis of tapwater lead concentration in homes of children with undue body lead burden, 8:24300 (J:US)
Analytical measurements of selected metals in samples from a human metabolic study, 8:24473 (J:US)
Comparative toxicity to weanling and adult rats of lead acetate in water, 8:24465 (J:US)
Effect of dietary lead and calcium on tissue lead accumulation and depletion in sheep, 8:24470 (J:US)
Effects of supplemental mangesium on blood and tissue lead levels and toxicity of ingested lead in the rat, 8:24469 (J:US)
Lead and iron status of breast and formula-fed infants, 8:24468 (J:US)
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
Tissue Distribution
Cardiovascular toxicology, 8:24447 (RA:US)

Toxicity
Cardiovascular toxicology, 8:24447 (RA:US)
Comparative toxicity to weanling and adult rats of lead acetate in water, 8:24465 (J:US)
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

LEAD 192
Gyromagnetic Ratio
G-factor of the 12^+ isomer in ^{192}Pb, 8:24697 (RA:DE:In German)

LEAD 208 TARGET
Carbon 12 Reactions
^{12}C and ^{8}Be production in $^{12}C+^{208}Pb$ collisions, 8:24701 (J:NL)
Spin orbit interaction of ^{12}C and ^{11}B, 8:24692 (RA:DE:In German)

LEAD 210
Activity Levels
Estimation of the cumulative exposure to uranium mine atmospheres by in vivo mesurements of lead-210 in the skull, 8:24736 (RA:US)
Radioecological Concentration
Radioactivity in groundwater associated with uranium and phosphate mining and processing, 8:24298 (J:US)
Radiometric Surveys
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)
Spatial Distribution
Estimation of the cumulative exposure to uranium mine atmospheres by in vivo mesurements of lead-210 in the skull, 8:24736 (RA:US)

LEAD 212
Radiometric Surveys
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)

LEAD 214
Radiometric Surveys
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)

LEAD ALLOYS
Melting
Liquid Li-Pb-Bi, a new tritium breeder, 8:24958 (J:US)

LEAD COMPOUNDS
Environmental Transport
Lake acidification: its effect on lead mobility in the sediment of two Adirondack lakes, 8:24289 (RA:US)

LEAD-ACID BATTERIES
Design
Bipolar lead accumulator cell with high energy density, 8:23671 (R:DE:In German)
Development of a lead tetrafluoroborate accumulator, 8:23670 (R:DE:In German)
Development of unique lightweight high-performance lead-acid batteries, 8:23673 (R:US)
Electrodes
Lead deficiency and hydrogen content in battery electrode beta-PbO_2, 8:23684 (J:US)
Fabrication
Bipolar lead accumulator cell with high energy density, 8:23671 (R:DE:In German)
Performance
Development of unique lightweight high-performance lead-acid batteries, 8:23673 (R:US)
Performance Testing
Development of a lead tetrafluoroborate accumulator, 8:23670 (R:DE:In German)
Research Programs
Status of improved lead-acid, nickel/iron, and nickel/zinc batteries being developed under DOE's electric vehicle battery program, 8:23676 (R:US)

LEAK DETECTORS
Leak detection inside a vacuum vessel, 8:25208 (J:US)

LEASES
Management
Improvements needed in the cash management practices of Interior's simultaneous oil and gas leasing program in Wyoming, 8:23724 (R:US)

LEAST SQUARE FIT
Optimization
LCLSQ1; linear least squares with constraints (IBM303x,360,370; FORTRAN), 8:25264 (R:US)

LEAVES
Biodegradation
Allochthonous litter decomposition in three Adirondack lakes, 8:24284 (RA:US)

LEGAL ASPECTS
Bibliographies
Title list of documents made publicly available, December 1-31, 1982, 8:23525 (R:US)

LEGUMINOSAE
See also ALFALFA
GLYCINE HISPIDA
Productivity
Ozone impacts on the productivity of selected crops (Corn, wheat, soybean and peanut crops), 8:24403 (R:US)

LEPTON-NUCLEON INTERACTIONS
See also ELECTRON-NUCLEON INTERACTIONS
Deep Inelastic Scattering
Nature of nonperturbative effects in lepton-nucleon scattering, 8:24624 (J:US)

LEUCOCYTES

LIGHTING SYSTEMS
Control Systems
Occupancy-controlled lighting: energy-savings demonstration and analysis, 8:23825 (R:US)
Electromagnetic Radiation
Biological effects of radio-frequency radiation, 8:23820 (RA:US)
Energy Efficiency
EMI measurements of lighting systems, 8:23824 (RA:US)
Fluorescent Lamps
Conducted and radiated signatures of fluorescent lamp systems in C and I environments, 8:23823 (RA:US)
Interference
Conducted and radiated signatures of fluorescent lamp systems in C and I environments, 8:23823 (RA:US)
EMI measurements of lighting systems, 8:23824 (RA:US)
Lighting-electromagnetic compatibility conference: proceedings, 8:23819 (R:US)
Reduction of AM radio interference through control of radiated electric field, 8:23821 (RA:US)
Meetings
Lighting-electromagnetic compatibility conference: proceedings, 8:23819 (R:US)

LIGHTNING ARRESTERS
Design
Metal-oxide surge arresters for gas-insulated systems, Phases I and II. Final report, 8:23438 (R:US)
Performance
Metal-oxide surge arresters for gas-insulated systems, Phases I and II. Final report, 8:23438 (R:US)
LIGNITE
Chemical Composition
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VIII. Coal quality analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23236 (R:US)
Pyrolysis
Coal pyrolysis by hot dolomitic solids from a fluidized bed combustor, 8:22902 (RA:CA)
LIME-LIMESTONE WET SCRUBBING PROCESSES
Mathematical Models
Advanced environmental control technology , 8:22952 (R:US)
Research Programs
Advanced environmental control technology , 8:22952 (R:US)
LIMESTONE
Elutriation
Standardized test methods for investigating attrition and elutriation characteristics of natural sorbents in fluidized-bed coal combustors, 8:24149 (R:US)
Fragmentation
Standardized test methods for investigating attrition and elutriation characteristics of natural sorbents in fluidized-bed coal combustors, 8:24149 (R:US)
Sorptive Properties
Exploratory and basic fluidized-bed combustion studies. Annual report, October 1980-September 1981, 8:24148 (R:US)
LIMITER CIRCUITS
Design
Development of a dc current limiting interrupting system for mines. Open file report Jun 79-Sep 81, 8:24109 (R:US)
LIMITERS
Coatings
Thermal fatigue testing of low-Z coatings on molybdenum and Inconel 625, 8:24907 (J:NL)
Computerized Simulation
Physics of particle exhaust in pump limiters, 8:24853 (J:NL)
Degassing
Outgassing characteristics of TiC coated materials, 8:24909 (J:NL)
Design
Design and analysis of the TFTR fixed limiters - 1, 8:25201 (J:US)
Design and analysis of the TFTR fixed limiters - 2, 8:25202 (J:US)
Design and mechanical analysis of TORE SUPRA vacuum vessels and limiters, 8:25207 (J:US)
Design of actively cooled limiters for Alcator A and C, 8:25210 (J:US)
Key design issues in the definition of the fusion engineering device (FED) first wall and limiter features, 8:24961 (J:US)
Tokamak limiter design, 8:25200 (J:US)
Erosion
Can wall and limiter erosion be eliminated in fusion reactors?, 8:24966 (J:US)
Damage and modifications in the Frascati tokamak limiter, 8:24897 (J:NL)
Erosion and redeposition analysis for limiter and divertor impurity control systems, 8:24878 (J:NL)
Pumping and erosion rates for the TFTR and INTOR/FED limiter designs, 8:24856 (J:NL)
Redeposition of the sputtered surface in limiters, 8:25166 (J:US)
Self-sustaining erosion-resistant low z coatings for first wall and limiter applications I: theory, 8:24967 (J:US)
Flow Models
Theoretical model for hot plasma flowing to a wall with recycling, 8:24870 (J:NL)
Life Span
Redeposition of the sputtered surface in limiters, 8:25166 (J:US)
Maintenance
Can wall and limiter erosion be eliminated in fusion reactors?, 8:24966 (J:US)
Materials Testing
Limiter, of dense and high thermal conducting material, for a fusion reactor, 8:25159 (J:US)
Performance
Experimental studies on pump limiters, 8:24850 (J:NL)
Test of a toroidal large area limiter in the ASDEX tokamak, 8:24859 (J:NL)
Sputtering
Redeposition of the sputtered surface in limiters, 8:25166 (J:US)

Aerosol Behavior Code Validation and Evaluation (ABCOVE) Program: preliminary results of Test AB5, 8:23617 (R:US)
Core Catchers
Experimental investigations of long-term interactions of molten UO_2 with MgO and concrete at Argonne National Laboratory, 8:23595 (R:US)
Crack Propagation
Modeling of crackling of sodium-concrete reactions, 8:23641 (J:US)
ECCS
Emergency core cooling system, 8:23521 (P:US)
Failed Element Detection
DN detection during SLSF tests, 8:23587 (R:US)
Fires
SOMIX1; sodium spray fires in cylindrical cell (IBM370; FORTRAN IV H Extended), 8:23508 (R:US)
Fuel Element Failure
BEHAVE-SST; overpower transient fuel mechanics (CDC7600; FORTRAN IV), 8:23512 (R:US)
Fuel Pins
PFR/TREAT programme: objectives, progress and future work, 8:23590 (R:US)
Fuel Rods
Design, fabrication, and performance of high burn-up sphere-pac fuel rods, 8:23517 (RA:US)
Fuel-Cladding Interactions
Fuel - cladding gap conductance measurements using Kalman filter methods, 8:23546 (J:US)
Heat Exchangers
Thermomechanical analysis of a SPX 1 type sodium-air heat exchanger, 8:23515 (R:IT:IT)
Loss of Flow
Analysis of recent fuel-disruption experiments, 8:23589 (R:US)
Status of fast-breeder-reactor safety, 8:23602 (R:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)
Meltdown
Effect of particle stratification on debris-bed dryout, 8:23598 (R:US)

Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium, 8:23596 (R:US)
Experimental investigations of long-term interactions of molten UO_2 with MgO and concrete at Argonne National Laboratory, 8:23595 (R:US)
Interaction and penetration of heated UO_2 with limestone concrete, 8:23597 (R:US)
Preliminary results of the first four TRAN fuel freezing experiments, 8:23649 (J:US)
Molten Metal-Water Reactions
PTA1; pipe system pressure analysis (IBM370/195; FORTRAN IV), 8:23510 (R:US)
Pressure Gradients
PTA1; pipe system pressure analysis (IBM370/195; FORTRAN IV), 8:23510 (R:US)
Reactor Accidents
Aerosol Behavior Code Validation and Evaluation (ABCOVE) Program: preliminary results of Test AB5, 8:23617 (R:US)
CACECO; LMFBR containment accident analysis (CDC CYBER74;CDC7600; CDC FORTRAN Extended with only a few statements that do not comply with the American National Standards Institute (ANSI) FORTRAN.), 8:23511 (R:US)
HAARM3; aerosol behavior log-normal dist model (CDC6400,7600,CYBER73; FORTRAN IV, FTN4.5 (CDC7600)), 8:23582 (R:US)
MAEROS user manual (LMFBR), 8:23627 (R:US)
NALAP; LMFBR transient response to accident (CDC7600,CYBER76; FORTRAN IV (99%) and COMPASS (1%)), 8:23581 (R:US)
Reactor Core Disruption
An assessment of SIMMER-11 freezing, melting, and plugging calculations, 8:23646 (J:US)
An improved quasistatic method for transition-phase calculations, 8:23657 (J:US)
Application of debris-bed dryout data to CONACS-1 modeling, 8:23599 (R:US)
Effect of particle stratification on debris-bed dryout, 8:23598 (R:US)
Experimental investigation of the unsteady one-phase flow through perforated plates, 8:23620 (R:DE:In German)
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium, 8:23596 (R:US)
Interaction and penetration of heated UO_2 with limestone concrete, 8:23597 (R:US)
Phenomenological studies of HCDA issues, 8:23594 (R:US)
Role of fuel power in HCDA early fuel dispersal, 8:23650 (J:US)
Selection of low-risk design guidelines for energetic events, 8:23591 (R:US)
Status and validation of the SAS4A accident-analysis code system, 8:23592 (R:US)
The effects of flowing fuel particulate on bulk freezing predictions, 8:23647 (J:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)
Reactor Core Restraints
Core restraint analysis of a free-flowering large heterogeneous LMFBR, 8:23644 (J:US)
NUBOW-2D Inelastic; bowed reactor core analysis (IBM370; FORTRAN IV), 8:23514 (R:US)
Reactor Materials
Calculation of thermophysical properties of sodium, 8:23516 (R:US)
Spent Fuel Elements
Effect of high solvent radiation exposures on TBP processing of spent LMFBR fuels, 8:23519 (R:US)
Steam Generators
Foster Wheeler protected bayonet-tube steam-generator conceptual designs, 8:23518 (R:US)
Stress Analysis
AXICRP; finite element code for creep analysis (CDC6600,7600,CYBER74; FORTRAN IV), 8:23513 (R:US)
System Failure Analysis
Structures for common-cause failure analysis, 8:23586 (R:US)
Transient Overpower Accidents
Analyses with the FSTATE code: fuel performance in destructive in-pile experiments, 8:23588 (R:US)
PFR/TREAT CO1 and LO1 experiments, 8:23593 (R:US)
Status of fast-breeder-reactor safety, 8:23602 (R:US)

LNG
See LIQUEFIED NATURAL GAS

LNG SPILLS
See GAS SPILLS

LOAD MANAGEMENT
Implementation
Issues in implementing a load-management program for direct load control. Final report, 8:23744 (R:US)
Planning
Issues in implementing a load-management program for direct load control. Final report, 8:23744 (R:US)

LOADING MACHINES (REACTOR)
See REACTOR CHARGING MACHINES

LOCA
See LOSS OF COOLANT

LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES

LONGWALL MINING
Backfilling
Investigations into monolithic pump packing as a means of underground roof support. Part B: field trials at South Bulli 'B' Mine and mathematical modelling, 8:22967 (R:AU)
Dusts
Research on air sprays and unique foam-application methods. Phase II-B report: laboratory investigation of air sprays, 8:22980 (R:US)
Powered Supports
Method of investigations, estimation and classification of roofs in mines in the United States of America for the selection of suitable mechanized support for longwalls. Report No. 2. State-of-the-art report on roof rock stability tests and powered support selection systems for longwalls, 8:22978 (R:US)
Productivity
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries, 8:22977 (R:PL)

LOS ALAMOS MESON PHYSICS FACILITY
See LAMPF LINAC

LOS ALAMOS SCIENTIFIC LABORATORY
See LASL

LOSS OF COOLANT
Computer Codes
BEACON/MOD3; containment system fluid flow (CDC CYBER176;CDC7600; FORTRAN IV (98%) and COMPASS (2%)), 8:23579 (R:US)
Computerized Simulation
TRAC-PD2/MOD1; best-estimate analysis PWR LOCA (CDC7600; FORTRAN IV (FTN 4.5 FORTRAN compiler) with selected COMPASS replacement routines), 8:23585 (R:US)
Heat Transfer
BWR refill-reflood program - TRAC-BWR component development, 8:23609 (R:US)
Hydraulics
BWR refill-reflood program - TRAC-BWR component development, 8:23609 (R:US)
Reactor Safety Experiments
Analysis of the BCL transient ECC bypass test with the TRAC-PD2/MOD1 code, 8:23652 (J:US)
Test Facilities
Application of a honeycomb insulator design in a variable high-temperature, high-pressure environment, 8:23658 (J:US)
Thermal Stresses
LOCA analysis of annular fuel pellet design for extended burnup (PWR), 8:23606 (RA:US)
Thermal and mechanical behaviour of PWR fuel rod simulators for LOCA-experiments, 8:23619 (R:DE)

LOSS OF FLOW
Status of fast-breeder-reactor safety, 8:23602 (R:US)

After-Heat Removal
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
NATBWR: a steady-state model for natural circulation in boiling-water reactors, 8:23612 (R:US)
Fuel Element Failure
Analyses with the FSTATE code: fuel performance in destructive in-pile experiments, 8:23588 (R:US)
Analysis of recent fuel-disruption experiments, 8:23589 (R:US)
Fuel Motion Detection
New aspects in the analysis of fuel dynamics during loss-of-flow transients, 8:23645 (J:US)
Heat Transfer
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
NATBWR: a steady-state model for natural circulation in boiling-water reactors, 8:23612 (R:US)
Scaling criteria for LWR's under single-phase and two-phase natural circulation, 8:23603 (R:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)
Hydraulics
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
NATBWR: a steady-state model for natural circulation in boiling-water reactors, 8:23612 (R:US)
Scaling criteria for LWR's under single-phase and two-phase natural circulation, 8:23603 (R:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)

LOUISIANA
Coastal Regions
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)
Land Reclamation
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)
Wetlands
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)

LOW BTU GAS
150 to 250 Btu/ft³.
Calorific Value
Combustion Engineering two-stage, atmospheric-pressure, entrained-flow coal-gasification-process development-unit program. Final report, 8:22931 (R:US)
Production
Gas generation of low b.t.u. fuel gas from agricultural residues. Final report, 8:23225 (R:US)

LOW INCOME GROUPS
Energy Conservation
Weatherization program in West Virginia, 8:23812 (R:US)
Fuel Consumption
Residential fuel comparison patterns for poor, black, and elderly households: a comparative study. Vol I. Data base development, 8:23793 (R:US)

LOW-BETA PLASMA
Beta from 0 to 0.01.
Electric Fields
Plasma convection and line-tying, 8:24788 (J:US)
Motion
Plasma convection and line-tying, 8:24788 (J:US)

LOW-HEAD HYDROELECTRIC POWER PLANTS
Prior to August 1978 HYDROELECTRIC POWER PLANTS was used.
Design
Upper Mechanicville Hydroelectric Redevelopment Project: project-management plan. Small-Scale Hydroelectric Power Demonstration Project, 8:23245 (R:US)
Economic Analysis
Upper Mechanicville Hydroelectric Redevelopment Project: project-management plan. Small-Scale Hydroelectric Power Demonstration Project, 8:23245 (R:US)

LOW-LEVEL RADIOACTIVE WASTES
Leaching
Influence of leach rate and other parameters on groundwater migration, 8:23184 (R:US)
Radioactive Waste Processing
On-line, real-time measurements of decontamination factors for a low-level waste incinerator, 8:23179 (J:NL)

LP-GAS
See LIQUEFIED PETROLEUM GASES

LUNGS
Radionuclide Kinetics
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)

LWR TYPE REACTORS
See WATER COOLED REACTORS

LYMPHOBLASTOMAS
See LYMPHOMAS

LYMPHOCYTES
Genetic Radiation Effects
Induction of chromosome aberrations, sister chromatid exchanges and specific locus mutations by radiation and chemicals, and the application of the studies to population monitoring and risk estimation, 8:24376 (RA:US)

LYMPHOGRANULOMAS
See LYMPHOMAS

LYMPHOID CELLS
See LYMPHOCYTES

LYMPHOMAS
Leukemogenesis
Radiation immunology (X radiation), 8:24386 (RA:US)

M

M1-TRANSITIONS
Magnetic dipole transitions.
Role of M1 transitions in the quasicontinuum, 8:24672 (R:US)

MA 754
See NICKEL BASE ALLOYS

MA 956
See IRON BASE ALLOYS

MACHINE TOOLS
See also LATHES
Control Systems
ADVCON; advance control 93 APT postprocessor (CDC CYBER174,175; FORTRAN IV), 8:24095 (R:US)
PTTOPT; point-to-point tool APT postprocessor (CDC CYBER174,175; FORTRAN IV), 8:24096 (R:US)

MAGNESIUM
Biological Effects
Effects of supplemental mangesium on blood and tissue lead levels and toxicity of ingested lead in the rat, 8:24469 (J:US)
Metabolism
Zinc and magnesium concentrations in plasma and red blood cells in patients on digitalis medication, 8:24462 (J:US)
Toxicity
Enzyme and gene regulation in Drosophila, 8:24412 (RA:US)
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

MAGNESIUM 24 TARGET
Carbon 12 Reactions
Measurement of elastic and inelastic scattering of ^{12}C on light target nuclei with high angular resolution, 8:24649 (RA:DE:In German)
Carbon 13 Reactions
Reaction model for the description of spin-flip in the inelastic scattering of $^{12}C + {}^{24}Mg \rightarrow {}^{12}C' + {}^{24}Mg^{*}(2^{+})$, 8:24652 (RA:DE:In German, English)
Oxygen 16 Reactions
Resonances in s-d shell nuclei, 8:24651 (R:US)

MAGNESIUM ALLOYS
See also MAGNESIUM BASE ALLOYS

Fractures
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)
Intergranular Corrosion
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)
Stress Corrosion
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)

MAGNESIUM BASE ALLOYS
Oxidation
Effect of trace alloying additions on the high-temperature oxidation of Al-4.2 wt % Mg and Al-3 wt % Li alloys, 8:23926 (RA:US)

MAGNESIUM OXIDES
Breakdown
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Dielectric Properties
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Electric Conductivity
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Interfaces
Formation energy of point defects in free surfaces and grain boundaries in MgO, 8:24000 (R:US)
Point Defects
Formation energy of point defects in free surfaces and grain boundaries in MgO, 8:24000 (R:US)
Surface Properties
Imaging and analysis of surfaces using diffracted electrons, 8:24068 (BA:US)
Thermal Conductivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Thermal Diffusivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)

MAGNET COILS
Analysis and design of short, iron-free dipole magnets, 8:25222 (J:US)
Cooling
TMX upgrade magnet system mechanical issues, 8:24845 (R:US)
Design
Analysis of external hybrid poloidal coil system, 8:24994 (J:US)
Design and fabrication considerations for normal copper pf coils located inside tf coils to facilitate replacement, 8:24918 (J:US)
Engineering design and construction of the S-1 spheromak coil systems, 8:25034 (J:US)
Epoxy impregnation system for TFTR large coil program, 8:24919 (J:US)
Fatigue design of the poloidal field coil for JT-60 tokamak machine, 8:25000 (J:US)
Normal conducting steady-state toroidal magnet systems for large tokamaks, 8:24997 (J:US)
Optimisation of the poloidal field coil system in pulsed tokamaks, 8:24996 (J:US)
Eddy Currents
Eddy current load estimation for toroidal shells as a result of plasma disruptions, 8:24990 (J:US)
Eddy current calculations for the tokamak fusion reactor through fields harmonics content, 8:24998 (J:US)
Electric Currents
Generation of multipole nulls in a tokamak geometry, 8:24995 (J:US)
Electrical Insulation
Electrical insulation qualification tests for TFTR TF and PF coils, 8:25007 (J:US)
Electrical Testing
Electrical insulation qualification tests for TFTR TF and PF coils, 8:25007 (J:US)
Electrical Transients
Calculation of transient current response of a set of coupled circuits using an eigenvalue technique, 8:24992 (J:US)
Fatigue
Fatigue design of the poloidal field coil for JT-60 tokamak machine, 8:25000 (J:US)
Magnetic Field Configurations
Pf coil current sheets for circular section tori to produce specified internal fields, 8:24993 (J:US)
Maintenance
Considerations for replacing PF coils on FED, 8:25047 (J:US)
Materials Testing
Selection and application of C18200 chrome copper for the OHTE confinement test helical coil, 8:25008 (J:US)
Molding Materials
Description of the molding system for the epoxy impregnation of the TFTR poloidal field coils, 8:25021 (J:US)
Optimization
Optimisation of the poloidal field coil system in pulsed tokamaks, 8:24996 (J:US)
Power Supplies
Power supply for the poloidal coil of tokamak fusion reactor, 8:25074 (J:US)
Stress Analysis
Bitter-type magnet plate design with compound conductor of ultrahigh mechanical strength, 8:25003 (J:US)
Nonlinear stress analysis of the poloidal field coil for JT-60 tokamak machine, 8:24999 (J:US)
On mechanical stresses in solenoids constructed of transversely isotropic materials, 8:25002 (J:US)
Supports
Development of tf coil support concepts by design methodology in the case of a Bitter-type magnet (Bitter-type magnets), 8:25004 (J:US)
Testing
Load tests of a large coil, 8:25001 (J:US)
Thermal Stresses
Load tests of a large coil, 8:25001 (J:US)

MAGNETIC ANALYZERS
Magnetic Fields
Field studies of an analyzing magnet and calculation of ion trajectories for charge exchange experiments, 8:24178 (RA:DE:In German)
Particle Tracks
Field studies of an analyzing magnet and calculation of ion trajectories for charge exchange experiments, 8:24178 (RA:DE:In German)

MAGNETIC BREMSSTRAHLUNG

SUPPORTS
Stress Analysis
CREEP-PLAST2; 2-dimensional inelastic structural analysis (IBM360,370; FORTRAN IV (95%) and BAL (5%)), 8:24090 (R:US)
Stresses
TFTR structural instrumentation, 8:25190 (J:US)
MEDICAL PERSONNEL
See also RADIOLOGICAL PERSONNEL
Radiation Protection
An overview of dental radiology: a primer on dental radiology, 8:24390 (R:US)
MEDITERRANEAN SEA
Seismicity
Observation of several large earthquakes with an eastern epicenter. The macroseismic region in Italy of the 1903 Greek earthquake, 8:24488 (R:IT:IT)
MEETINGS
CONF; conference attendee & speaker data file (CDC6600; COBOL 4.5.), 8:25254 (R:US)
MELANOCYTES
See ANIMAL CELLS
MELTDOWN
Experimental investigations of long-term interactions of molten UO_2 with MgO and concrete at Argonne National Laboratory (LMFBR), 8:23595 (R:US)
After-Heat Removal
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Dryout
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)
Heat Transfer
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)

Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Interaction and penetration of heated UO_2 with limestone concrete (LMFBR), 8:23597 (R:US)
Hydraulics
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Test Facilities
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Thermal Stresses
Interaction and penetration of heated UO_2 with limestone concrete (LMFBR), 8:23597 (R:US)

MELTING
Molecular Models
Molecular-dynamics study of 2-D melting: long-range potentials, 8:24520 (R:US)

MEMBRANE TRANSPORT
Metabolism
Regulation of transport systems in cultured mammalian cells, 8:24352 (RA:US)

MEN
Sensitivity
Serum copper, follicular stimulating hormone, luteinizing hormone, prolactin, spermatic count, viability, progression and seminal zinc correlations in a human (male) infertility study, 8:24472 (J:US)

MERC PROCESS
Waste Water
Advantages/limitations of solvent extraction, ozonation, and carbon adsorption for reduction of nonbiodegradable residuals in METC fixed-bed gasification wastewaters. Final report, 8:22925 (R:US)

MERCURY
Biological Accumulation
Epidemiologic investigation of the mercury excretion in the urine of children living in an area of industrial concentration (Western Ruhr District), 8:24410 (R:DE:In German)
Ecological Concentration
Variability of mercury concentrations of midcontinent soils, USA; baseline data for a coal-fired power plant, 8:24259 (J:US)
Mass Transfer
Mass transfer in a bubble-agitated liquid-liquid system, 8:24139 (J:US)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)

MERCURY 203
Isotope Applications
Some factors influencing liver metallothionein levels in rats and mice, 8:24323 (J:US)

MERCURY CHLORIDES
Genetic Effects
In vivo cytogenetic effect of some salts of the heavy metals cadmium, chromium, mercury, and platinum in assays of micronuclei and sister chromatid exchange, 8:24411 (R:DE:In German)

MESH GENERATION
Computer Codes
ZONE; 2-dimensional finite element mesh generator (CDC7600; FORTRAN), 8:25235 (R:US)

MESON FACTORIES

Absorption Spectroscopy
Trace element and polycyclic aromatic hydrocarbon levels in sediment cores from Sagamore and Woods Lakes, 8:24288 (RA:US)
Charge Exchange
Charge transfer and the effective Coulomb interaction at metal surfaces, 8:24743 (J:US)
Corrosion
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Coulomb Field
Charge transfer and the effective Coulomb interaction at metal surfaces, 8:24743 (J:US)
Creep
Crack and cavity nucleation at interfaces during creep, 8:23938 (R:US)
DEsign for elevated temperature environmetns: some current problems and concerns, 8:23924 (RA:US)
Crystal Defects
Positron prevacancy effects in pure annealed metals, 8:23893 (R:US)
Defects
Characterization of defects in metals by positron-annihilation spectroscopy, 8:23953 (R:US)
Ecological Concentration
Trace element and polycyclic aromatic hydrocarbon levels in sediment cores from Sagamore and Woods Lakes, 8:24288 (RA:US)
Electron-Positron Collisions
Positron-annihilation characteristics in real solids including many-body enhancement effects, 8:24721 (R:US)
Fatigue
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Grain Boundaries
Analysis of diffraction from [001] twist boundaries in cubic metals, 8:23951 (R:US)
Health Hazards
Problems associated with heavy metals in drinking water, 8:24463 (J:US)
Kapitza Resistance
Kapitza thermal boundary resistance between two solids, 8:24746 (BA:US)

Meetings
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Phase Studies
Coupled stress-concentration spinodals, 8:23930 (RA:US)
Physical Radiation Effects
Environmental degradation of engineering materials in aggressive environments, 8:23895 (R:US)
Quantitative Chemical Analysis
X-ray fluorescence/X-ray energy analysis as a trace element tool, 8:24324 (J:US)
Radiation Effects
Radiation effects in metallic alloys, 8:23918 (RA:US)
Self-Diffusion
Atomic defects and diffusion in metals, 8:23936 (R:US)
Stresses
Coupled stress-concentration spinodals, 8:23930 (RA:US)
Surface Coating
Structure of metallic coatings for impurity control in MACROTOR, 8:24882 (J:NL)

METEOROLOGY
DOECTZDATA; California sixteen-zone weather data (IBM360), 8:25223 (R:US)

METER WAVE RADIATION
See RADIOWAVE RADIATION

METHANATION
Catalysis
Design and modeling of low-pressure-drop methanation reactors, 8:23218 (R:US)
Catalysts
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)
Transmission and backscatter Moessbauer spectroscopy of zeolite Fe (and Fe-Co) synfuel catalysts, 8:24057 (R:US)
Chemical Reaction Yield
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)
Chemical Reactors
Design and modeling of low-pressure-drop methanation reactors, 8:23218 (R:US)
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)

METHANE
Air Pollution Monitors
Development of a methane measuring equipment for several measuring points, 8:23008 (R:DE:In German)
Gas Flow
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries (FRG), 8:22977 (R:PL)
Production
Electron assisted methane production on carbon surfaces, 8:25163 (J:US)
Energy from marine biomass: methane production by mariculture on land. Final report, 8:23272 (R:US)
Family and community biogas plants in rural India and China, 8:23222 (R:US)
Recovery
Degasification of longwalls. Phase 1: annex to report no. 2 on the technology of degasification of mines in Poland and other European countries (FRG), 8:22977 (R:PL)
Landfill gas recovery in the USA, 8:23873 (R:US)
Unconventional gas resources (Eastern Gas Shales, Western Gas Sands, Coalbed Methane, Methane from Geopressured Systems), 8:23075 (R:US)
Synthesis
Pilot-plant study of an adiabatic parallel-plate methanation reactor, 8:23220 (R:US)
Yields
Computer optimization of landfill-cover design, 8:23871 (R:US)

METHANOL
Market
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume III. Market analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23230 (R:US)
Marketing Research
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume III. Market analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23230 (R:US)
Operating Cost
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Prices
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume III. Market analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23230 (R:US)
Production
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23235 (R:US)
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume V. Economic and financial analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23231 (R:US)
Purification
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Synthesis
Transportation fuels from indirect coal liquefaction (US DOE; reviews and considers work in other countries), 8:22918 (R:US)
Thermodynamic Properties
Predicting the performance and cost of ORC waste-heat-recovery systems, 8:24157 (R:US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Combustion
A brief summary of the technical feasibility, emissions, and fuel economy of pure methanol engines, 8:23237 (R:US)
Feasibility Studies
A brief summary of the technical feasibility, emissions, and fuel economy of pure methanol engines, 8:23237 (R:US)
Annotated review of the technological state-of-the-art of ethyl and methyl alcohol-based fuels and determination of the economic feasibility of commercial-scale production of such fuels, 8:23238 (R:US)
Production
Annotated review of the technological state-of-the-art of ethyl and methyl alcohol-based fuels and determination of the economic feasibility of commercial-scale production of such fuels, 8:23238 (R:US)

METHANOL PLANTS
By-Products
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume III. Market analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23230 (R:US)
Capitalized Cost
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)

Design
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
Economic Analysis
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume V. Economic and financial analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23231 (R:US)
Engineering
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Preliminary design and assessment of a 50,000-BPD coal-to-methanol-to-gasoline plant. Final report (W.R. Grace project coal-gasification-methanol-gasoline project at Baskett, KY), 8:22922 (R:US)
Environmental Effects
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23233 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23235 (R:US)
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Equipment
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Feasibility Studies
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23234 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23228 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume III. Market analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23230 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23235 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VIII. Coal quality analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23236 (R:US)
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume V. Economic and financial analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23231 (R:US)
Legal Aspects
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Operating Cost
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume II. Preliminary plant design and cost estimate (Proposed methanol project near Dunn Center, North Dakota), 8:23229 (R:US)
Permit Applications
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Risk Assessment
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume V. Economic and financial analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23231 (R:US)
Site Selection
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23233 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23234 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23235 (R:US)
Socio-Economic Factors
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23233 (R:US)
Dunn-Nokota Methanol Project, Dunn County, North Dakota. Volume VII. Environmental and socioeconomic assessments (Proposed methanol project near Dunn Center, North Dakota), 8:23234 (R:US)
Taxes
Dunn-Nokota methanol project, Dunn County, North Dakota. Volume VI. Tax, legal and regulatory analysis (Proposed methanol project near Dunn Center, North Dakota), 8:23232 (R:US)
Water Supply

MEXICO
Volcanoes
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Configuration Control
Device configuration management system, 8:25178 (J:US)
Control Systems
Device configuration management system, 8:25178 (J:US)
Local controls and instrumentation for MFTF, 8:24921 (J:US)
Tools and methods for the implementing the control system on the mirror fusion test facility, 8:24953 (J:US)
ECR Heating
Quasi-optical ECRH beam system for MFTF-B, 8:24776 (R:US)
Electrical Equipment
Mirror fusion test facility electrical systems, status and plans, 8:25217 (J:US)
Ion Sources
Industrialization and production of neutral beam ion sources for MFTF, 8:25114 (J:US)
Neutral Beam Sources
Industrialization and production of neutral beam ion sources for MFTF, 8:25114 (J:US)
Safety procedures for the MFTF sustaining neutral beam power supply, 8:25072 (J:US)
Power Supplies
CAMAC-based interlock system for power supply hardware protection on MFTF, 8:25188 (J:US)
Pressure Vessels
Analysis of ambient vibrational motion of MFTF-A vessel/magnet structure, 8:24839 (R:US)
Reactor Safety
Safety procedures for the MFTF sustaining neutral beam power supply, 8:25072 (J:US)
MHD CHANNELS
Design
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
Electrical Faults
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
Flow Models
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
MHD GENERATOR CDIF
Coal-fired Component Development and Integration Facility at Butte, Montana.
Combustors
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
MHD Channels
Research and development studies for MHD/coal power flow-train components. Technical progress report, 1 September 1981-1 September 1982, 8:23775 (R:US)
MHD GENERATOR CFFF
Coal Fired Flow Facility for MHD generator component testing at Tullahoma, Tenn.
Superconducting Magnets
Fabrication experiences of the Coal-Fired Flow Facility superconducting dipole magnet, 8:23777 (J:US)
Measurements of mechanical properties of superstructures materials for the CFFF superconducting MHD magnet, 8:23778 (J:US)
Safety consequences of shorted turns in a cryostable superconducting magnet, 8:23780 (J:US)
MHD GENERATOR U-25
Natural-gas fired MHD pilot plant in the USSR.
Performance
U-25B MHD-generator performance, 8:23768 (R:US)
Systems Analysis
U-25B MHD-generator performance, 8:23768 (R:US)
MHD GENERATORS

Resource recovery technology application document. Final report, 8:23870 (R:US)
MILITARY PERSONNEL
Radiation Doses
Analysis of radiation exposure for troop observers, Exercise Desert Rock VI, Operation Teapot. Final report 1 Mar-15 Jul 80, 8:24359 (R:US)
Operation TUMBLER-SNAPPER 1952. Technical report, 8:24361 (R:US)
MILL TAILINGS
Decommissioning
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R:US)
Decontamination
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R:US)
Environmental Impact Statements
Final environmental impact statement for remedial action standards for inactive uranium processing sites (40 CFR 192) Volume I. Final report, 8:23186 (R:US)
Liners
Performance of asphalt and clay liners as a uranium mill tailings leachate barrier, 8:23164 (R:US)
PH Value
Evaluation of selected neutralizing agents for the treatment of uranium tailings leachates. Laboratory progress report, 8:23152 (R:US)
Radioactivity
Basic technique and models for determining exposure rates over uranium-bearing soils. Final report, 8:23185 (R:US)
Radiochemistry
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)
Radionuclide Migration
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)
Stabilization
Design surface covers: an approach to long-term waste site stabilization, 8:23172 (R:US)
MILLSTONE-1 REACTOR
Electrical Equipment
Technical evaluation report on the adequacy of station electric-distribution-system voltages for the Millstone Nuclear Power Station, Units 1 and 2. Docket Nos. 50-245, 50-336, 8:23467 (R:US)
Power Supplies
Technical evaluation report on the adequacy of station electric-distribution-system voltages for the Millstone Nuclear Power Station, Units 1 and 2. Docket Nos. 50-245, 50-336, 8:23467 (R:US)
MILLSTONE-2 REACTOR
Electrical Equipment
Technical evaluation report on the adequacy of station electric-distribution-system voltages for the Millstone Nuclear Power Station, Units 1 and 2. Docket Nos. 50-245, 50-336, 8:23467 (R:US)
Power Supplies
Technical evaluation report on the adequacy of station electric-distribution-system voltages for the Millstone Nuclear Power Station, Units 1 and 2. Docket Nos. 50-245, 50-336, 8:23467 (R:US)
MINE HAULAGE
Power Systems
Development of a dc current limiting interrupting system for mines. Open file report Jun 79-Sep 81, 8:24109 (R:US)
MINE ROADWAYS
Supports
Method of investigations, estimation and classification of roofs in mines in the United States of America for the selection of suitable mechanized support for longwalls. Report No. 2. State-of-the-art report on roof rock stability tests and powered support selection systems for longwalls, 8:22978 (R:US)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERALS
See also ZEOLITES
Catalytic Effects
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Sorptive Properties
Actinide sorption on rock minerals, 8:23146 (RA:DE)
X-Ray Diffraction
Further development of automatic measuring equipment for X-ray mineral analysis with computer, 8:24496 (R:DE:In German)
MINERS
See also COAL MINERS
Health Hazards
Review of uranium miners study and statements of outstanding problems. Technical report, 8:24389 (R:US)
MINES
See also COAL MINES
URANIUM MINES
DC Systems
Development of a dc current limiting interrupting system for mines. Open file report Jun 79-Sep 81, 8:24109 (R:US)
MINING

OIL SAND MINING
OIL SHALE MINING
SOLUTION MINING
SURFACE MINING
UNDERGROUND MINING
Environmental Effects
Cadmium and lead contaminated soils in some British metal mining areas, 8:24260 (J:US)
Radioactivity in groundwater associated with uranium and phosphate mining and processing, 8:24298 (J:US)

MINING EQUIPMENT
Alarm Systems
Built-In Test Equipment (BITE) to improve front-end-loader productivity. Final technical report, 8:22973 (R:US)
Data Acquisition Systems
Built-In Test Equipment (BITE) to improve front-end-loader productivity. Final technical report, 8:22973 (R:US)
Duty-cycle investigations of continuous miners. Volume II. Instrument manual, 8:22975 (R:US)
Display Devices
Built-In Test Equipment (BITE) to improve front-end-loader productivity. Final technical report, 8:22973 (R:US)
Duty-cycle investigations of continuous miners. Volume II. Instrument manual, 8:22975 (R:US)
Measuring Instruments
Built-In Test Equipment (BITE) to improve front-end-loader productivity. Final technical report, 8:22973 (R:US)
Microprocessors
Built-In Test Equipment (BITE) to improve front-end-loader productivity. Final technical report, 8:22973 (R:US)
MINI-SERVE STATIONS
See GASOLINE SERVICE STATIONS
MIRROR FUSION TEST FACILITY
See MFTF DEVICES
MIRRORS
Production
Method for producing highly reflective metal surfaces, 8:23976 (P:US)
Replicas
Method for producing highly reflective metal surfaces, 8:23976 (P:US)
Surface Properties
Method for producing highly reflective metal surfaces, 8:23976 (P:US)
MISGURNUS
See FISHES
MIT BATES LINAC
Bates Electron Linear Accelerator Facility at MIT.
Electron Sources
Polarized electron source for parity experiment at Bates, 8:24176 (R:US)
MITOCHONDRIA
Sensitivity
Effect of dietary manganese on the respiratory activity of liver mitochondria, 8:24466 (J:US)
MMS
See METHYL METHANESULFONATE
MNU
See METHYL NITROSOUREA
MOBIL M-GASOLINE PROCESS
Catalysts
Transportation fuels from indirect coal liquefaction (US DOE; reviews and considers work in other countries), 8:22918 (R:US)
Temperature Control
Transportation fuels from indirect coal liquefaction (US DOE; reviews and considers work in other countries), 8:22918 (R:US)
MODELS (NUCLEAR)
See NUCLEAR MODELS
MOISTURE
Effects of moisture on radon emanation including the effects on diffusion. Open file report oct 79-Nov 81, 8:23097 (R:US)
MOLDING MATERIALS
Evaluation
Diallyl phthalate prepolymer characterization and testing in fiberglass filled molding compounds, 8:24019 (R:US)
MOLDS

Affinity
Electron affinities of atoms, molecules, and radicals, 8:24525 (R:US)
Interaction of slow electrons with high-pressure gases ('Quasi-liquids'): synthesis of our knowledge on slow electron-molecule interactions. Progress report, 8:24526 (R:US)
Dynamics
Intramolecular dynamics in the quasiperiodic and stochastic regimes, 8:24561 (BA:US)
Electron Attachment
Interaction of slow electrons with high-pressure gases ('Quasi-liquids'): synthesis of our knowledge on slow electron-molecule interactions. Progress report, 8:24526 (R:US)
Energy Levels
Electron affinities of atoms, molecules, and radicals, 8:24525 (R:US)
Excited States
Electronic excited state transport among molecules distributed randomly in a finite volume, 8:24551 (J:US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Fuel Systems
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for fuel-cell program, 8:23782 (R:US)
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for the fuel-cell program, 8:23781 (R:US)
Materials
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Materials Testing
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Thermodynamics
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
MOLYBDENUM
Catalytic Effects
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Coatings
Thermal fatigue testing of low-Z coatings on molybdenum and Inconel 625, 8:24907 (J:NL)
Fatigue
Fatigue data of molybdenum, 8:25164 (J:US)
MOLYBDENUM 100 TARGET
Argon 40 Reactions
Charge equilibration in the deep-inelastic reactions $^{40}Ar + {}^{100}Mo$ and $^{36}Ar + {}^{92}Mo$, 8:24675 (RA:DE:In German)
MOLYBDENUM 92 TARGET
Argon 36 Reactions
Charge equilibration in the deep-inelastic reactions $^{40}Ar + {}^{100}Mo$ and $^{36}Ar + {}^{92}Mo$, 8:24675 (RA:DE:In German)

Krypton 86 Reactions
Role of deformation and shell effects in deep inelastic collisions of $^{86}Kr + {}^{86}Sr, {}^{90}Zr, {}^{92}Mo$ at energies close to the Coulomb barrier, 8:24667 (RA:DE:In German, English)

MOLYBDENUM COMPOUNDS
See also MOLYBDENUM OXIDES
MOLYBDENUM SULFIDES
Crystal Structure
Neutron powder diffraction study of the lithium insertion compound $LiMoO_2$ from 4 to 440°k, 8:24044 (J:GB)
Magnetic Susceptibility
Neutron powder diffraction study of the lithium insertion compound $LiMoO_2$ from 4 to 440°k, 8:24044 (J:GB)

MOLYBDENUM OXIDES
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)

MOLYBDENUM SULFIDES
Superconductivity
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)
Transition Temperature
Hydrostatic pressure effects on the superconductivity of La/sub 1.2-x/Eu/sub x/MO_6S_8 pseudoternary compounds, 8:24041 (J:US)

Acoustic Measurements
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Electrical Properties
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Exploration
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Report to the Fort Belknap Community Council on the work undertaken during the summer, 1979, 8:23014 (R:US)
Explosive Fracturing
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)
Evaluation of stimulation technologies in the Eastern Gas Shales Project, 8:23073 (R:US)
Fractures
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Geochemistry
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Comparative geochemistry of Devonian shale cores from the Appalachian Basin, Mason, Monongalia, and Upshur Counties, West Virginia; Illinois Basin, Tazwell County, Illinois; Clark County, Indiana; and Michigan Basin, Sanilac County, Michigan, 8:23061 (R:US)
Hydraulic Fracturing
Effectiveness of hydraulic-fracturing treatments in the Devonian Shale, 8:23076 (R:US)
Evaluation of stimulation technologies in the Eastern Gas Shales Project, 8:23073 (R:US)
Leases
Improvements needed in the cash management practices of Interior's simultaneous oil and gas leasing program in Wyoming, 8:23724 (R:US)
Lithology
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Organic Matter
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980 (Formation-density wire logs), 8:23062 (R:US)
Permeability
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)

Porosity
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Resource Assessment
Eastern Gas Shales Project: increasing US natural gas reserves from eastern gas-bearing shales, 8:23072 (R:US)
Outer Continental Shelf (OCS) Oil and Gas Supply Model. Volume 3. User's guide and guide to model applications, 8:23013 (R:US)
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Seismic Surveys
Three-dimensional migration of travel time maps, 8:23049 (R:DE:In German)
Stratigraphy
Analysis of the Devonian shales in the Appalachian Basin, 8:23057 (R:US)
Approximation of continuity of lenticular Mesaverde Group sandstone lenses utilizing close-well correlations, Piceance Basin, NW Colorado. SPE 11610, 8:23059 (R:US)
Ultrasonic Testing
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Water Saturation
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Well Logging
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980 (Formation-density wire logs), 8:23062 (R:US)

NATURAL GAS DISTRIBUTION SYSTEMS
Capitalized Cost
Marginal-cost pricing for gas distribution utilities: further analyses and models, 8:23065 (R:US)
Data Acquisition Systems
Use of computers for the documentation of supply lines, 8:23430 (R:DE:In German)
Data Compilation
Gas supplies of interstate natural gas pipeline companies, 1981, 8:23048 (R:US)
Operating Cost
Marginal-cost pricing for gas distribution utilities: further analyses and models, 8:23065 (R:US)

NATURAL GAS FIELDS
Aerial Surveying
Correlation of surficial geologic anomalies with gas production, Cottageville Field, West Virginia, 8:23055 (R:US)
Equipment
Costs and indexes for domestic oil- and gas field equipment and production operations, 1982, 8:23017 (R:US)
Fluid Withdrawal
Gas deliverability and flow capacity of surveillance gas fields in Texas (1982-2001), 8:23063 (R:US)
Resource Depletion
Gas deliverability and flow capacity of surveillance gas fields in Texas (1982-2001), 8:23063 (R:US)
Topography

NEODYMIUM 146 TARGET
Oxygen 16 Reactions
Complete fusion in the system $^{146}Nd + {}^{16}O$ at 10 MeV/N, 8:24687 (RA:DE:In German)

NEODYMIUM IONS
Spin-Lattice Relaxation
Concentration and temperature dependence of the 4f spin relaxation of isolated Nd and Ce ions in simple metals, 8:23968 (RA:DE:In German, English)

NEODYMIUM LASERS
Synchronization
Laser sequencing, synchronization, and safety systems, 8:25150 (J:US)

NEON
Ion-Atom Collisions
Charge distributions of recoil ions, 8:24537 (RA:DE:In German)
Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)
NEON 20 REACTIONS
Breakup Reactions
Dissociation of 15 MeV/nucleon ^{20}Ne in collisions with ^{197}Au: direct reactions leading to particle-emitting states, 8:24693 (RA:DE:In German, English)
Dissociation of ^{20}Ne in collisions with ^{40}Ca at 14.5 MeV/nucleon, 8:24660 (RA:DE:In German, English)
Deep Inelastic Heavy Ion Reactions
Evidence for non-sequential emission of fast α-particles in deep-inelastic ^{20}Ne + ^{197}Au collisions at 14.5 MeV/nucleon, 8:24694 (RA:DE:In German, English)
Elastic Scattering
Excitation of the giant quadrupole resonance in ^{58}Ni by 40 MeV ^{20}Ne, 8:24657 (RA:DE:In German)
Study of inelastic and single-neutron transfer reactions induced by 14.5 MeV/A ^{20}Ne ions on ^{40}Ca, 8:24659 (RA:DE:In German, English)
Heavy Ion Reactions
Incomplete momentum transfer in fusion reactions, 8:24662 (RA:DE:In German)
Measurement of coincidences between evaporation residues and fast light particles, 8:24668 (RA:DE:In German)
Search for 'fast fission' at the system ^{20}Ne + ^{197}Au, 8:24696 (RA:DE:In German, English)
Spin polarization in ^{20}Ne + ^{168}Er collisions at 13.5 MeV/N, 8:24654 (RA:DE:In German)
Study of ^{20}Ne + ^{40}Ca at Esub(lab)/A = 14.5 MeV, 8:24661 (RA:DE:In German, English)
Inclusive Interactions
Balance between light-fragment and fission inclusive cross sections of the ^{20}Ne + ^{197}Au reaction between 7.5 and 20 MeV/nucleon, 8:24653 (RA:DE:In German, English)
Light charged-particle emission from ^{197}Au + ^{20}Ne, 8:24700 (RA:DE:In German, English)
Neutron emission in the reaction ^{165}Ho + ^{20}Ne, 8:24684 (RA:DE:In German, English)
Inelastic Scattering
Dissociation of 15 MeV/nucleon ^{20}Ne in collisions with ^{197}Au: direct reactions leading to particle-emitting states, 8:24693 (RA:DE:In German, English)
Dissociation of ^{20}Ne in collisions with ^{40}Ca at 14.5 MeV/nucleon, 8:24660 (RA:DE:In German, English)
Excitation of the giant quadrupole resonance in ^{58}Ni by 40 MeV ^{20}Ne, 8:24657 (RA:DE:In German)
Study of inelastic and single-neutron transfer reactions induced by 14.5 MeV/A ^{20}Ne ions on ^{40}Ca, 8:24659 (RA:DE:In German, English)
One-Nucleon Transfer Reactions
Dissociation of 15 MeV/nucleon ^{20}Ne in collisions with ^{197}Au: direct reactions leading to particle-emitting states, 8:24693 (RA:DE:In German, English)
Study of inelastic and single-neutron transfer reactions induced by 14.5 MeV/A ^{20}Ne ions on ^{40}Ca, 8:24659 (RA:DE:In German, English)
NEON 22 REACTIONS
One-Nucleon Transfer Reactions
Spectroscopy of neutron-rich nuclei via particle-γ-coincidences with a magnetic spectrograph, 8:24202 (RA:DE:In German)
Two-Nucleon Transfer Reactions
Spectroscopy of neutron-rich nuclei via particle-γ-coincidences with a magnetic spectrograph, 8:24202 (RA:DE:In German)
NEON IONS
Ion-Atom Collisions
Investigation of the asymmetry of the charge transfer into continuum in collisions of 155 MeV Ne^{10+} in He, 8:24539 (RA:DE:In German)
NEONATES
Sensitivity
Comparative toxicity to weanling and adult rats of lead acetate in water, 8:24465 (J:US)
NEOPLASMS
See also CARCINOMAS
LEUKEMIA
LYMPHOMAS
Radioinduction
Carcinogenesis following prenatal exposure to radiation, 8:24395 (J:DE)
NEPAL
Small-Scale Hydroelectric Power Plants
Sample survey of traditional water wheels and small water turbines in nepal: a preliminary report, 8:23242 (R:US)
NEPTUNIUM 237
Inventories
Byproduct inventories, 8:23171 (R:US)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)
NETHERLANDS
Energy Models
Determination of environment parameters for SELPE, a model for energy supply, 8:22959 (R:NL:In Dutch)
Hydroelectric Power Plants

NEUTRAL ATOM BEAM INJECTION
Valves
Fast shutter valve for TFTR neutral beam lines, 8:25128 (J:US)
NEUTRAL BEAM SOURCES
Development, fabrication and tests of the periplasmatron ion sources for ASDEX, 8:25088 (J:US)
Gas density distribution results for NBSTF, 8:25086 (J:US)
Improved plasma generator for the PLT/PDX neutral beam injectors, 8:25113 (J:US)
Status of the JET neutral injection system, 8:25108 (J:US)
Beam Dumps
Design of calorimeter and ion dump for JET neutral injection beam line, 8:25111 (J:US)
Beam Neutralization
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Beam Transport
Beam trajectories calculation code for ion source in neutral beam injector, 8:25085 (J:US)
Calorimeters
TFTR neutral beam calorimeter fabrication and instrumentation, 8:25215 (J:US)
Computerized Control Systems
Development and operation of PDX neutral beam computer system, 8:25102 (J:US)
Very high level neutral beam control system, 8:25104 (J:US)
Construction
Construction of prototype injector unit for JT-60, 8:25110 (J:US)
Control Systems
Computer control and data acquisition for neutral-beam injectors, 8:24829 (R:US)
Control of a high-power neutral beam generator by means of arc-current regulation, 8:25105 (J:US)
Data Acquisition Systems
Computer control and data acquisition for neutral-beam injectors, 8:24829 (R:US)
Design
Highlights of the Zephyr neutral beam injection system conceptual design, 8:25084 (J:US)
Eddy Currents
Magnetic shielding and eddy current effects measurements in a Doublet III neutral beam injector, 8:25091 (J:US)
Electric Arcs
Arc notching on PDX neutral beams, 8:24809 (J:US)
Electric Cables
Cable information retrieval program, 8:25106 (J:US)
Engineering
Engineering design and manufacturing of prototype neutral injector for JET, 8:25115 (J:US)

Installation
Installation and start-up of the PDX neutral beam injection system, 8:25081 (J:US)
Ion Sources
Prototype ion source for JT-60 NBI, 8:25109 (J:US)
Magnetic Shielding
Magnetic shielding and eddy current effects measurements in a Doublet III neutral beam injector, 8:25091 (J:US)
Performance
Experience with the Wendelstein VII-neutral injectors, 8:25083 (J:US)
Performance of the ASDEX neutral beam injector, 8:25082 (J:US)
Power Supplies
Design and development of an electronic crowbar for the protection of HVDC neutral beam components, 8:25092 (J:US)
Development of a high voltage crowbar, 8:25066 (J:US)
Doublet III neutral beam power system, 8:25090 (J:US)
Safety procedures for the MFTF sustaining neutral beam power supply, 8:25072 (J:US)
Reviews
Future needs for neutral beams in fusion, 8:25107 (J:US)
Technology Assessment
Industrialization and production of neutral beam ion sources for MFTF, 8:25114 (J:US)
Status and trends in the development and application of positive-ion-based neutral injectors, 8:25112 (J:US)
Temperature Effects
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Test Facilities
Cyrogenics for TFTR neutral beam test cell, 8:25117 (J:US)
Design of the precast, post-tensioned concrete shielding structure for the TFTR neutral beam test cell, 8:25116 (J:US)
TFTR neutral beam test facility, 8:25067 (J:US)

NEUTRINO DETECTION
Status of U.C. Irvine neutrino oscillation detector, 8:24586 (RA:US)

NEUTRINO-PROTON INTERACTIONS
See also ANTINEUTRINO-PROTON INTERACTIONS
Deep Inelastic Scattering
Direct determination of the quark density ratio d(x)/u(x) in the proton from νp and anti νp interactions, 8:24604 (R:DE)

NEUTRINOS
Oscillations
Neutrino oscillations, 8:24584 (RA:US)
Perspectives on weak interactions, 8:24579 (RA:US)
Phenomenological analysis of reactor data for neutrino oscillations, 8:24587 (RA:US)
Results of a first round 150 MeV nu/sub μ/ oscillation experiment and implications for future LAMPF experiments, 8:24597 (RA:US)

NEUTRON ACTIVATION ANALYSIS
See NEUTRON REACTIONS

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON DETECTION
Measurement of neutron multiplicity distributions with scintillator tank, 8:24198 (RA:DE:In German)
Activation Detectors
Comparison between LYRA and SAND code performance for the extrapolation of data from activation detectors used for determining spectra of acceleration neutrons, 8:24203 (R:IT)
He-3 Counters
New gas mixture improves performance of ^{3}He neutron counters, 8:24207 (J:NL)

NEUTRON DETECTORS
See also ACTIVATION DETECTORS
HE-3 COUNTERS
SELF-POWERED NEUTRON DETECTORS
Sensitivity
DN detection during SLSF tests, 8:23587 (R:US)

NEUTRON DIFFRACTION
Small Angle Scattering
National Center for Small-Angle Scattering Research, 8:24732 (BA:US)

NEUTRON DIFFRACTOMETERS
Data Acquisition Systems
Data acquisition system for the neutron scattering instruments at the intense pulsed neutron source, 8:24172 (R:US)
IPNS distributed-processing data-acquisition system, 8:24173 (R:US)

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON REACTIONS
Cross Sections
DOPSEL; self-shielding in the resonance region (IBM370; FORTRAN IV), 8:24702 (R:US)
HAUSER5; nuclear reaction cross sections (UNIVAC1100/44; FORTRAN V), 8:24640 (R:US)
Re-evaluation of the neutron scattering dynamics in heavy water, generation of multigroup cross sections for THERM-126, 8:24724 (R:DE)
Self-Shielding
DOPSEL; self-shielding in the resonance region (IBM370; FORTRAN IV), 8:24702 (R:US)

NEUTRON SEPARATION ENERGY
Prediction of mass excess, β-decay energy and neutron separation energy from the atomic mass formula with empirical shell terms, 8:24643 (R:JP)

NEUTRON SOURCE FACILITIES
See also IPNS-I SYNCHROTRON
Targets
Evaluation of structural integrity of IPNS-I and ZING-P' targets, 8:24171 (R:US)

NEUTRON SPECTROMETERS
Activation Detectors
Comparison between LYRA and SAND code performance for the extrapolation of data from activation detectors used for determining spectra of acceleration neutrons, 8:24203 (R:IT)
Specifications
National Center for Small-Angle Scattering Research, 8:24732 (BA:US)

NEUTRONS
Oscillations
Neutron oscillations, 8:24619 (RA:US)
RBE
Radiation carcinogenesis (Neutrons, ultraviolet radiation), 8:24388 (RA:US)
Slowing-Down
DEMONR; unbiased Monte Carlo slab shield code (IBM360/65; FORTRAN IV), 8:24716 (R:US)
Transmission
SPAR1; shielding with analytic ray-tracing (CDC6600,7600; FORTRAN IV), 8:24719 (R:US)

NEVADA
See also STEAMBOAT SPRINGS
Geological Surveys
Sources of compass error in tunnel mapping, 8:24495 (J:US)
Ground Water
Two-dimensional, steady-state model of ground-water flow, Nevada Test Site and vicinity, Nevada-California, 8:24484 (R:US)

NEVADA TEST SITE
Ground Water
Two-dimensional, steady-state model of ground-water flow, Nevada Test Site and vicinity, Nevada-California, 8:24484 (R:US)
Petrography
Detailed petrographic descriptions and microprobe data for drill holes USW-G2 and UE25b-1H, Yucca Mountain, Nevada, 8:24485 (R:US)
Radioactive Waste Disposal
Calculation of the probability of volcanic disruption of a high-level radioactive waste repository within southern Nevada, USA, 8:23189 (J:GB)

NEW MEXICO
Earthquakes
Earthquake catalog for northern New Mexico. Progress report, January-March 1982, 8:24489 (R:US)

NEW YORK
Black Shales
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)
Government Policies
State-local relations and urban technology: a study in intergovernmental decision making - executive summary, 8:24304 (R:US)
State-local relations and urban technology: a study in intergovernmental decision making, 8:24305 (R:US)
Low-Head Hydroelectric Power Plants
Upper Mechanicville Hydroelectric Redevelopment Project: project-management plan. Small-Scale Hydroelectric Power Demonstration Project, 8:23245 (R:US)
Natural Gas Deposits
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)
NEWBORNS

NEONATES
NICKEL
Breakdown
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Catalytic Effects
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)
Pilot-plant study of an adiabatic parallel-plate methanation reactor (Raney nickel), 8:23220 (R:US)
Chemical Composition
Pilot-plant study of an adiabatic parallel-plate methanation reactor (Raney nickel), 8:23220 (R:US)
Crystal Field
Hyperfine fields at ^{19}F in nickel in the critical region, 8:23958 (RA:DE:In German)
Hyperfine field at ^{23}Na in nickel, 8:23959 (RA:DE:In German)
Dielectric Properties
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Electric Conductivity
High field conduction and dielectric breakdown in nominally pure and nickel-doped MgO crystals at high temperatures, 8:24009 (J:US)
Intergranular Corrosion
Grain boundary segregation and intergranular corrosion of nickel, 8:23898 (RA:US)
Ion-Atom Collisions
Observation of the recoil effect on the K-shell excitation probabilities in ion-atom collisions, 8:24543 (RA:DE:In German)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
Vacancies
Positron annihilation in solid and liquid Ni, 8:23940 (R:US)
Positron-annihilation measurements of vacancy formation in Ni and Ni(Ge), 8:23941 (R:US)
Vacancy formation in Ni and Ni(Ge), 8:23933 (R:US)
NICKEL 58 TARGET
Carbon 12 Reactions
Light particle emission from the reaction of ^{12}C with ^{58}Ni and ^{197}Au at 25 MeV per nucleon, 8:24666 (RA:DE:In German, English)
Carbon 13 Reactions
Search for giant resonance charge exchange modes using the (^{13}C,^{13}N) reaction, 8:24658 (RA:DE:In German, English)
Neon 20 Reactions
Excitation of the giant quadrupole resonance in ^{58}Ni by 40 MeV ^{20}Ne, 8:24657 (RA:DE:In German)
NICKEL 60 TARGET
Neon 20 Reactions
Measurement of coincidences between evaporation residues and fast light particles, 8:24668 (RA:DE:In German)
NICKEL 63
NMR Spectra
Local susceptibility of ^{63}Ni in palladium, 8:23960 (RA:DE:In German)
NICKEL ALLOYS
See also NICKEL BASE ALLOYS
NICKEL STEELS
Corrosion
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
Sea water corrosion of two-phase Cu-10Ni-8Sn, 8:23897 (RA:US)
Corrosion Resistance
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Crystallization
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)
Electrochemical Corrosion
Corrosion behavior of high density tungsten alloys, 8:23899 (RA:US)
Intergranular Corrosion
Grain boundary segregation and intergranular corrosion of nickel, 8:23898 (RA:US)
Moessbauer Effect
Moessbauer spectrometry study of Fe-Ni-X alloys, 8:23970 (R:US)
Phase Studies
Stem observation of crystallization in thin films of amorphous Fe/sub 40/Ni/sub 40/P/sub 14/B/sub 6/, 8:23984 (J:US)
Physical Radiation Effects
Surface segregation in concentrated Ni-Cu alloys under irradiation (Ni-10Cu; Ni-60Cu), 8:23943 (R:US)
Sputtering
Ion-bombardment-induced subsurface composition modifications in alloys at elevated temperatures (Cu - 40 at. % Ni), 8:23932 (R:US)
Surface Properties
Imaging and analysis of surfaces using diffracted electrons, 8:24068 (BA:US)
NICKEL BASE ALLOYS

Brittle-Ductile Transitions
Role of grain size on the brittle-to-ductile transition of the strongly ordered alloy Ni_3Al: report on progress during year-2, 8:23952 (R:US)
Corrosion
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R:US)
Ductility
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)
Embrittlement
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)
Metallographic and fractographic aspects of liquid-metal embrittlement (Al-Zn-Mg (6.3% Zn 2.9% Mg); Ni 200 alloy (99.5% Ni); Inconel 601; D6AC steel), 8:23915 (RA:US)
Fractures
Metallographic and fractographic aspects of liquid-metal embrittlement (Al-Zn-Mg (6.3% Zn 2.9% Mg); Ni 200 alloy (99.5% Ni); Inconel 601; D6AC steel), 8:23915 (RA:US)
Hydrogen Embrittlement
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)

Mechanical Properties
Role of grain size on the brittle-to-ductile transition of the strongly ordered alloy Ni_3Al: report on progress during year-2, 8:23952 (R:US)
Physical Radiation Effects
Surface segregation in concentrated Ni-Cu alloys under irradiation (Ni-10Cu; Ni-60Cu), 8:23943 (R:US)
Stress Corrosion
Long time corrosion testing with and without mechanical stress of high temperature alloys for blades of land based gas turbines with high output, 8:23892 (R:DE:In German)
Tensile Properties
Liquid metal and hydrogen embrittlement of nickel and iron-base amorphous alloys (Metglas 2826, BNi-3, BNi-6, FeBSi, FeBCSi), 8:23916 (RA:US)
Vacancies
Positron-annihilation measurements of vacancy formation in Ni and Ni(Ge), 8:23941 (R:US)
Vacancy formation in Ni and Ni(Ge), 8:23933 (R:US)

NICKEL COMPLEXES
Liquid Column Chromatography
Fractionations of non-porphyrin complexes of vanadium and nickel from Boscan crude oil, 8:24047 (R:US)

NICKEL HYDRIDES
Interstitials
Interstitial site occupation in ZrNiH, 8:23997 (R:US)

NICKEL OXIDES
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Sorptive Properties
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_3O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)

NICKEL STEELS
Fracture Properties
Development of ferritic weldments for grain-refined ferritic steels for 4.2K service, 8:23971 (R:US)
Welded Joints
Development of ferritic weldments for grain-refined ferritic steels for 4.2K service, 8:23971 (R:US)

NICKEL SULFATES
Fusion Heat
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
Melting Points
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
Phase Diagrams
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
Thermodynamics

Electrical Testing
Origin of resistive voltage and the related problems in large-capacity Nb_3Sn conductor, 8:25020 (J:US)
Soldering
Soldering studies of an aluminum stabilized superconductor, 8:25048 (J:US)
Superconductivity
Specific heat of in situ superconducting composites, 8:23973 (J:US)

NIOBIUM BASE ALLOYS
Current Density
Current densities of commercial NbTi-based alloys for high field applications, 8:24118 (J:US)

NITRATES
See also BARIUM NITRATES
Deposition
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)
Mass Balance
Lake acidification during spring snowmelt: processes and causes, 8:24285 (RA:US)
Washout
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)

NITRIC ACID
Atmospheric Chemistry
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Equilibrium
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Phase Studies
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Photoelectron Spectroscopy
Laser photoelectron spectroscopy of ions. Progress report, August 1, 1982-July 31, 1983, 8:24527 (R:US)

NITRIC OXIDE
NO.
Effect of secondary combustion on nitric oxide concentrations in a MHD combustion gas, 8:23767 (R:US)

NITRIDES
See also ALUMINIUM NITRIDES
SILICON NITRIDES
TITANIUM NITRIDES
Optical Properties
Optical properties of solids for solar energy conversion, 8:24006 (R:US)

NITRO COMPOUNDS
See also NITROMETHANE
Adsorption
Studies of molecular adsorbates at interfaces by optical second-harmonic generation (p-nitrobenzoic acid), 8:24069 (R:US)
Genetic Effects
Induction of chromosome aberrations, sister chromatid exchanges and specific locus mutations by radiation and chemicals, and the application of the studies to population monitoring and risk estimation, 8:24376 (RA:US)
Mutagen Screening
Mammalian cell genetic toxicology, 8:24416 (RA:US)

NITROGEN
Ion-Molecule Collisions
Reactions of ions with atomic and molecular free radicals. Final report, May 1, 1975-November 30, 1982, 8:24522 (R:US)
Mineralization
Effects of simulated acid precipitation on carbon and nitrogen mineralization in soil, 8:24256 (RA:US)

NITROGEN 16
Beta-Minus Decay
0^- to 0^+ beta decay in A = 16, 8:24644 (R:US)
NITROGEN DIOXIDE
NO_2
Biological Effects
Effect of NO_2 and SO_2 alone and in combination on the productivity of field-grown soybeans, 8:24406 (R:US)
NITROGEN IONS
Ion-Atom Collisions
Target-thickness dependence of K-shell vacancy fractions in foil-excited ion beams, 8:24557 (J:US)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE
Air Pollution Abatement
Multi-fuel low-NO/sub x/ burner development, Phase II. Final report Mar 79-Feb 82, 8:24152 (R:US)
Atmospheric Chemistry
Atmospheric cycles of nitrogen oxides and ammonia, 8:24239 (R:US)
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Chemical Reaction Yield
Shoreside boiler demonstration of fuel-water emulsions. Final report Mar 80-Aug 82, 8:23047 (R:US)
Equilibrium
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Gas Spills
Large-scale hazardous gas release experiments, 8:23069 (R:US)
Personnel Monitoring
State-of-the-art of commercially available personal monitors for NO/sub x/, SO_2 and particulate matter in ambient air, 8:24246 (J:US)
Phase Studies
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Reduction
Advanced environmental control technology , 8:22952 (R:US)
Removal
Advanced environmental control technology , 8:22952 (R:US)
DOE's electron-beam-irradiation development program, 8:22954 (R:US)
Simultaneous removal of SO_2 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
Scavenging
Precipitation-scavenging chemistry for sulfate and nitrate from the SURE and related data. Volume 2. Final report, 8:24224 (R:US)
NITROMETHANE
Dissociation
Photodissociation of nitromethane at 266 nm, 8:24562 (J:US)
NITROSAMINES
Biological Effects
Chemical effects on the immune system, 8:24448 (RA:US)
Immunosuppression
Chemical effects on the immune system, 8:24448 (RA:US)
Mutagenesis
Comparative mutagenesis, 8:24415 (RA:US)
NITROSO COMPOUNDS
See also METHYL NITROSOUREA
NITROSAMINES
Biological Effects
DNA repair studies in mammalian germ cells, 8:24433 (RA:US)
Effect of ethylnitrosourea, methylnitrosourea, and hydroxyethylnitrosourea on the testis, 8:24440 (RA:US)
Genetic Effects
Dose-response curve for ethylnitrosourea-induced specific-locus mutations in mouse spermatogonia, 8:24421 (RA:US)
Effect of dose fractionation on the ethylnitrosourea induction of specific-locus mutations in mouse spermatogonia and its bearing on risk estimation, 8:24422 (RA:US)
Effect of sex and cell stage on induction of mutations by ethylnitrosourea in the mouse, 8:24423 (RA:US)
Ethylnitrosourea is also a supermutagen for dominant skeletal mutations, 8:24428 (RA:US)
Mammalian biochemical genetics (X radiation and mutagens), 8:24379 (RA:US)
Nature of specific-locus mutations induced by ethylnitrosourea in mouse spermatogonia, 8:24424 (RA:US)
Metabolism
Comparative mutagenesis, 8:24415 (RA:US)
Mutagen Screening
Investigation of the supermutagen ENU and other substances in the Mouse Spot Test, 8:24427 (RA:US)
Mammalian cell genetic toxicology, 8:24416 (RA:US)
Mutagenesis
Comparative mutagenesis, 8:24415 (RA:US)
Toxicity
Cytometrics, 8:24450 (RA:US)
NITROUS ACID
Atmospheric Chemistry
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Equilibrium
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
Phase Studies
Solubility equilibria of the nitrogen oxides and oxyacids in dilute aqueous solution, 8:24247 (J:US)
NO. 2 FUEL OIL

NUCLEAR EXPLOSION DETECTION
Seismic Detection
Investigations of near-source structural effects on body waves. Part II. Yucca Flats; receiver functions appropriate to NTS; motive functional specifications. Annual technical report, 8:24221 (R:US)
Seismic discrimination. Semiannual technical sumMary report no. 36, 1 Oct 81-31 mar 82, 8:24222 (R:US)

NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
Energy Yield
Yield determination using long-wavelength black-body radiation from an underground nuclear explosion, 8:24220 (R:US)
Radiation Hazards
Analysis of radiation exposure for troop observers, Exercise Desert Rock VI, Operation Teapot. Final report 1 Mar-15 Jul 80, 8:24359 (R:US)
Analysis of radiation exposure, 4th Marine Corps provisional atomic exercise brigade, exercise Desert Rock VII, Operation Plumbbob. Final report 1 Mar 80-15 Jun 81, 8:24360 (R:US)

NUCLEAR FACILITIES
See also FEED MATERIALS PLANTS
FUEL FABRICATION PLANTS
FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Legal Aspects
Title list of documents made publicly available, December 1-31, 1982, 8:23525 (R:US)
Radiation Doses
NRC TLD Direct Radiation-Monitoring Network. Progress report, July-September 1982, 8:24264 (R:US)
Radiation Monitoring
NRC TLD Direct Radiation-Monitoring Network. Progress report, July-September 1982, 8:24264 (R:US)
Radioactivity Transport
UDAD; uranium dispersion & dosimetry model (IBM370,303x; FORTRAN IV (94%), PLL/I (4%), and Assembly language (2%). The only use of PL/I is the auxiliary plotting program, CONTOUR. The only use of Assembly language is the DATE, Gregorian calendar date routine), 8:23187 (R:US)
Safeguards
Safeguards Summary Event List (SSEL), 8:23195 (R:US)

NUCLEAR FORCES
Nuclear Models
Nuclear forces and nuclear matter including pions and isobars, 8:24703 (R:US)

NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS

NUCLEAR FUELS

Air Samplers
Mechanical-reliability evaluation of a proposed emergency-response radioiodine air sampler, 8:24249 (R:US)
Computerized Simulation
DSNP; dynamic simulation nuclear power plants (IBM370; FORTRAN IV and DSNP), 8:23539 (R:US)
Containment Buildings
Windfield and trajectory models for tornado-propelled objects. Final report, 8:23614 (R:US)
Containment Shells
Buckling investigation of ring-stiffened cylindrical shells with reinforced openings under unsymmetrical axial loads, 8:23551 (R:US)
Full-scale turbine-missile concrete impact experiments. Final report, 8:23610 (R:US)

Control Rooms
Technical issues related to NUREG 0800, Chapter 18: Human Factors Engineering/Standard Review Plan, 8:23531 (R:US)
Economic Analysis
Investment analysis in electricity supply. Staff working paper, 8:23422 (R:US)
Projected costs of electricity from nuclear and coal-fired power plants. Volume 2, 8:23741 (R:US)
Electrical Equipment
Summary of the Plant Electrical Systems (PES) Study, 8:23550 (R:US)
Legal Aspects
Operating reactors licensing actions summary, 8:23527 (R:US)
Operating Cost
Projected costs of electricity from nuclear and coal-fired power plants. Volume 2, 8:23741 (R:US)
Performance
PREMOR; two-group point reactor power plant model (IBM360,370,303x; FORTRAN IV (97%) and Assembler (3%)), 8:23540 (R:US)
Power Generation
Electric power monthly (For July 1982), 8:23736 (R:US)
Electric power monthly (For November 1981), 8:23731 (R:US)
Electric power monthly (For April 1982), 8:23733 (R:US)
Electric power monthly (For June 1982), 8:23735 (R:US)
Electric power monthly (For May 1982), 8:23734 (R:US)
Electric power monthly (For February 1982), 8:23732 (R:US)
Electric power monthly, 8:23738 (R:US)
Electric power monthly (For October 1982), 8:23737 (R:US)
Electric Power Monthly, 8:23739 (R:US)
Radioactive Effluents
XOQDOQ; nuclear power plant effluent releases (IBM370,303x; FORTRAN IV), 8:23572 (R:US)
Reactor Control Systems
Cognitive models and computer aids for nuclear plant control room operators, 8:23559 (RA:US)
Cognitive models embedded in system simulation models, 8:23565 (RA:US)
Framework for modeling supervisory control behavior of operators of nuclear power plants, 8:23558 (RA:US)
Human cognition, 8:23562 (RA:US)
Outline of a model of human problem solving in failure situations, 8:23564 (RA:US)
Role of cognitive models of operators in the design, operation and licensing of nuclear power plants, 8:23557 (RA:US)
Role of conceptual models in nuclear power plant operation, 8:23563 (RA:US)
Rule-based approach to cognitive modeling of real-time decision making, 8:23566 (RA:US)
Visual momentum: an example of cognitive models applied to interface design, 8:23560 (RA:US)
Workshop on cognitive modeling of nuclear-plant control-room operators, 8:23556 (R:US)
Reactor Decommissioning
Funding nuclear-power-plant decommissioning. Final report, 8:23536 (R:US)
Reactor Licensing
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), February 1-February 28, 1983, 8:23526 (R:US)
Reactor Operation
Licensed operating reactors. Status summary report data as of October 31, 1982, 8:23523 (R:US)
Operating experiences with nuclear power plants in the Federal Republic of Germany (1974 summary), 8:23444 (TJ:US)
Operating reactors licensing actions summary, 8:23527 (R:US)
Reactor Operators
Cognitive models and computer aids for nuclear plant control room operators, 8:23559 (RA:US)
Cognitive models embedded in system simulation models, 8:23565 (RA:US)
Framework for modeling supervisory control behavior of operators of nuclear power plants, 8:23558 (RA:US)
Human cognition, 8:23562 (RA:US)
Outline of a model of human problem solving in failure situations, 8:23564 (RA:US)
Role of cognitive models of operators in the design, operation and licensing of nuclear power plants, 8:23557 (RA:US)
Role of conceptual models in nuclear power plant operation, 8:23563 (RA:US)
Rule-based approach to cognitive modeling of real-time decision making, 8:23566 (RA:US)
Workshop on cognitive modeling of nuclear-plant control-room operators, 8:23556 (R:US)
Reactor Safety
Selected review and evaluation of US safety research vis-a-vis foreign safety research for nuclear power plants, 8:23636 (R:US)
Reviews
Nuclear power industry, 1981, 8:23442 (R:US)
Risk Assessment
An incentive approach to eliciting probabilities. Research report, 8:24307 (R:US)
Human-reliability data bank for nuclear power plant operations. Volume 1. A review of existing human-reliability data banks, 8:23630 (R:US)
Interim Reliability Evaluation Program procedures guide, 8:23629 (R:US)
Safeguards
Acceptance criteria for determining armed response force size at nuclear power plants, 8:23196 (R:US)
Security Personnel
Acceptance criteria for determining armed response force size at nuclear power plants, 8:23196 (R:US)
Site Selection
Investment analysis in electricity supply. Staff working paper, 8:23422 (R:US)
Steam Generators
Intergranular attack in Inconel 600 nuclear steam generator tubes, 8:23923 (RA:US)
Structural Models
Application of reduction methods to nuclear power plant structures, 8:23634 (R:US)
Technology Assessment
Energy technology data handbook. Vol. 1, 8:23423 (R:DE)

Organisms and compounds of unnatural isotopic composition in NMR, 8:24348 (R:US)
Mass Spectroscopy
Activated-sludge treatment and organic characterization of oil shale retort water, 8:23088 (R:US)
Superconductivity
Some basic questions in organic superconductivity, 8:24028 (R:US)
ORGANIC FLUORINE COMPOUNDS
See also FLUORINATED ALIPHATIC HYDROCARBONS
Radiolysis
EPR study of a radical anion in x-ray irradiated trifluoroacetamide single crystals at 3 K, 8:24077 (J:US)
ORGANIC HALOGEN COMPOUNDS
See also ORGANIC CHLORINE COMPOUNDS
ORGANIC FLUORINE COMPOUNDS
Corrosive Effects
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)
ORGANIC INSULATORS
Physical Radiation Effects
Effect of low-temperature reactor irradiation on organic insulators in superconducting magnets (II), 8:24021 (TJ:US)
Effect of low-temperature reactor irradiation on organic insulators in superconducting magnets (III), 8:24020 (TJ:US)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also NITRO COMPOUNDS
NITROSO COMPOUNDS
PORPHYRINS
PTERIDINES
Metabolism
Carcinogen activity in human and rodent cells and tissues, 8:24451 (RA:US)
Toxicity
Cytotoxicity of fossil fuel related pure compounds and complex mixtures, 8:24420 (RA:US)
ORGANIC OXYGEN COMPOUNDS
Excluding HYDROXY COMPOUNDS, CARBONIC ACID DERIVATIVES, LIPIDS, STEROIDS, CARBOHYDRATES, ORGANIC ACIDS, ALDEHYDES, KETONES and ESTERS.
See also EPOXIDES
ETHERS
Dosimetry
Molecular dosimetry of ethylene oxide in the mouse, 8:24436 (RA:US)
Genetic Effects
Inhalation mutagenesis of ethylene oxide: unscheduled DNA synthesis and dominant lethal effects, 8:24435 (RA:US)
Mutagen Screening
Use of the mouse heritable translocation test in testing chemicals (Ammoniated glycerrhizin; butylated hydroxytoluene; gum arabic; ethylene oxide), 8:24430 (RA:US)
ORGANIC SOLVENTS
Adsorption
Process for removal of organic solvents (Japanese Patent), 8:24054 (TG:US)
On-Line Measurement Systems
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Recycling
Process for removal of organic solvents (Japanese Patent), 8:24054 (TG:US)
Removal
Process for removal of organic solvents (Japanese Patent), 8:24054 (TG:US)
ORGANIC SULFUR COMPOUNDS
See also SULFONIC ACID ESTERS
Corrosive Effects
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)
ORGANIZATION ECONOMIC CO-OPERATION AND DE
See OECD
OSCILLATIONS (PLASMA)
See PLASMA WAVES
OSCILLOGRAPHS
Uses
Use of oscillograph records for analyzing system performance, 8:23440 (R:US)
OTEC

OVERBURDEN
Leachates
Effect of underground coal gasification on groundwater. Final report, 8:22960 (R:IT)
Sorptive Properties
Effect of underground coal gasification on groundwater. Final report, 8:22960 (R:IT)
OXETANE
See ETHERS
OXIDES
See also ALUMINIUM OXIDES, BERYLLIUM OXIDES, CALCIUM OXIDES, COBALT OXIDES, COPPER OXIDES, GADOLINIUM OXIDES, IRON OXIDES, LITHIUM OXIDES, MAGNESIUM OXIDES, MANGANESE OXIDES, MOLYBDENUM OXIDES, NICKEL OXIDES, NITROGEN OXIDES, PHOSPHORUS OXIDES, SILICON OXIDES, SODIUM OXIDES, SULFUR OXIDES, TITANIUM OXIDES, TUNGSTEN OXIDES, URANIUM OXIDES, VANADIUM OXIDES, ZINC OXIDES, ZIRCONIUM OXIDES
Structural Chemical Analysis
Small-angle neutron scattering studies of a compatible polymer blend, atactic polystyrene-poly(2,6 dimethyl phenylene oxide), 8:24073 (J:GB)
OXIRANS
See EPOXIDES
OXY MODIFIED IN-SITU PROCESS
Before March 7, 1977 GARRETT PROCESS was used for this process.
Research Programs
Oil-shale Program. Twenty-sixth quarterly report, April 1982-June 1982, 8:23082 (R:US)
Waste Water
Activated-sludge treatment and organic characterization of oil shale retort water, 8:23088 (R:US)
OXYGEN
Chemisorption
Chemisorption of oxygen on Cu(110) studied by eels and leed, 8:24744 (J:NL)
Consumption Rates
Computer-assisted system for determination of O_2 consumption and CO_2 production in man. Final report, 8:24399 (R:US)
Ion-Molecule Collisions
Reactions of ions with atomic and molecular free radicals. Final report, May 1, 1975-November 30, 1982, 8:24522 (R:US)
Production
Computer-assisted system for determination of O_2 consumption and CO_2 production in man. Final report, 8:24399 (R:US)
Raman Spectra
Collision-free coherent anti-stokes Raman spectroscopy (CARS) of molecular photofragments, 8:24558 (J:NL)
Toxicity
Systemic toxicology, 8:24442 (RA:US)
OXYGEN 16
Hypernuclei
Preliminary report on an experiment to observe Σ hypernuclei in the 1p shell nuclei, 8:24595 (RA:US)
OXYGEN 16 REACTIONS
Alpha-Transfer Reactions
Resonances in s-d shell nuclei, 8:24651 (R:US)
Heavy Ion Reactions
Complete fusion in the system $^{148}Nd + {}^{16}O$ at 10 MeV/N, 8:24687 (RA:DE:In German)
Global increase of near- and below-barrier fusion for heavier systems, 8:24664 (RA:DE:In German, English)
Intermediate Resonance
Resonances in s-d shell nuclei, 8:24651 (R:US)
Transfer Reactions
Calculation of reaction cross sections for deformed nuclei, 8:24683 (RA:DE:In German, English)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN HYDRIDES
See WATER
OXYMETHYLENE
See FORMALDEHYDE
OZONE
Biological Effects
Effect of NO_2 and SO_2 alone and in combination on the productivity of field-grown soybeans, 8:24406 (R:US)
Ozone impacts on the productivity of selected crops (Corn, wheat, soybean and peanut crops), 8:24403 (R:US)
Variation in photosynthesis and stomatal conductance in an ozone-stressed ponderosa pine stand: light response, 8:24455 (J:US)
Ecological Concentration
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides. Technical progress report, November 1, 1979-June 30, 1980, 8:24232 (R:US)
Spatial Distribution
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides. Technical progress report, November 1, 1979-June 30, 1980, 8:24232 (R:US)
OZONIZATION
Advantages/limitations of solvent extraction, ozonation, and carbon adsorption for reduction of nonbiodegradable residuals in METC fixed-bed gasification wastewaters. Final report, 8:22925 (R:US)

P

PACIFIC NORTHWEST LABORATORIES
See BATTELLE PACIFIC NORTHWEST LABORATORIES
PACKINGS
Comparative Evaluations
EDS-coal-liquefaction process development. Phase IV. Construction of Exxon Coal-Liquefaction Pilot Plant. Final report (Viton, Kalrez; temperature effects), 8:22919 (R:US)
Field Tests
Investigations into monolithic pump packing as a means of underground roof support. Part B: field trials at South Bulli 'B' Mine and mathematical modelling, 8:22967 (R:AU)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PALLADIUM
Electric Conductivity
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Inventories
Byproduct inventories, 8:23171 (R:US)
Magnetic Properties
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Metamagnetism of palladium, 8:23894 (R:US)
Magnetic Susceptibility
Local susceptibility of ^{62}Ni in palladium, 8:23960 (RA:DE:In German)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)
Superconductivity
Superconductivity in Au-Cr-Au and Ag-Pd-Ag epitaxial metal film sandwiches, 8:23944 (R:US)
PALLADIUM 110 TARGET
Argon 40 Reactions
Measurement of neutron multiplicity distributions with scintillator tank, 8:24198 (RA:DE:In German)

PALLADIUM IONS
Electron Spin Resonance
Optical spectroscopy and electron paramagnetic resonance of Pa^{4+} in $ThBr_4$ and $ThCl_4$ crystals, 8:23889 (J:US)
PALO VERDE-1 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
PALO VERDE-2 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
PALO VERDE-3 REACTOR
Reactor Licensing
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units, 1, 2, and 3: Docket Nos. STN 50-528, STN 50-529, and STN 50-530, 8:23528 (R:US)
PARABANIC ACID
See ORGANIC OXYGEN COMPOUNDS
PARTIAL DIFFERENTIAL EQUATIONS
See also KORTEWEG-DE VRIES EQUATION
MAXWELL EQUATIONS
Baecklund Transformation
Painleve property for partial differential equations, 8:25280 (J:US)
Numerical Solution
2DEPEP; elliptic, parabolic & eigenvalue solutions. (CDC6500,7600; FORTRAN IV), 8:25244 (R:US)
DISPL1; 1- and 2-dimensional kinetics-diffusion partial differential equations solution (IBM370/195,303x;CDC7600,6600,CYBER175; MORTRAN2 (80%) and FORTRAN (20%)), 8:24569 (R:US)
MOL1D; partial differential equations solution (CDC6600,7600;Amdahl470;IBM3033; FORTRAN IV), 8:25253 (R:US)
PDEONE; solutions of partial differential equations (CDC7600,6600; FORTRAN IV), 8:25239 (R:US)
Singularity
Painleve property for partial differential equations, 8:25280 (J:US)
PARTICLE SIZE CLASSIFIERS
Interferometry
MIE scattering theory for particle sizing interferometry with the dual beam laser velocimeter, 8:23773 (R:US)
PARTICLE-INDUCED X-RAY EMISSION ANALYSIS
See X-RAY EMISSION ANALYSIS
PARTICLES
When appropriate use more specific terms listed under CHARGED PARTICLES, ELEMENTARY PARTICLES, and QUASI PARTICLES.
See also DROPLETS
PARTICULATES
Light Scattering
MIE scattering theory for particle sizing interferometry with the dual beam laser velocimeter, 8:23773 (R:US)
PARTICLES (FUEL)
See FUEL PARTICLES
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Biological Effects
Analysis of health effects resulting from population exposures to ambient particulate matter. Annual progress report, July 16, 1982-March 15, 1983, 8:24407 (R:US)
Analysis of health effects resulting from population exposures to ambient particulate matter. Appendices to the annual progress report, July 16, 1982-March 15, 1983, 8:24409 (R:US)
Chemical Analysis
Isotopic analysis of micrometer and submicrometer particles by direct-inlet mass spectrometry, 8:24052 (R:US)
Chemical Reaction Yield
Shoreside boiler demonstration of fuel-water emulsions. Final report Mar 80-Aug 82, 8:23047 (R:US)
Hydraulic Transport
Engineering approaches to the development of hydraulic transport, 8:24107 (R:US)
Monitoring
Real-time total-mass analysis of particulates in the stack of an industrial power plant, 8:24242 (R:US)
Mutagen Screening
Mutagenicity of diesel exhaust particle extracts: influence of driving cycle and environmental temperature, 8:24456 (J:US)
Particle Size
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels. Progress report, February 16, 1982-February 15, 1983, 8:24082 (R:US)
Removal
Electrostatically augmented gas-cleanup devices for particular removal, 8:22947 (R:US)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
DRUM WALLS
Performance Testing
Class B performance monitoring of passive/hybrid solar buildings, 8:23326 (R:US)
PASSIVE SOLAR WATER HEATERS
Performance
Solar-energy-system performance evaluation: Colorado Sunworks single-family residence, Longmont, Colorado, November 1978-May 1979, 8:23337 (R:US)
PATIENTS
Radiation Protection
An overview of dental radiology: a primer on dental radiology, 8:24390 (R:US)
Whole-Body Counting
Application of a multiple least-squares regression program to dual energy NaI-CsI(T1) measurements, 8:24368 (RA:US)
Body burden estimation of P-32 by measurement and calibration of Bremsstrahlung radiation produced in the head, 8:24369 (RA:US)
PCB
See CHLORINATED AROMATIC HYDROCARBONS
PDX DEVICES
Computerized Control Systems
PDX diagnostic control system, 8:25185 (J:US)
PDX operating controls, 8:25183 (J:US)
ECR Heating
60 GHz ecrh system for the PPL PDX machine, 8:25123 (J:US)
Electric Arcs
Arc notching on PDX neutral beams, 8:24809 (J:US)
Getters
Design and test results of an in-torus zirconium/aluminum getter pump system for PDX, 8:25211 (J:US)
Reduction of recycling by pumping at the PDX limiter, 8:24857 (J:NL)
Impurities
Impurity levels and power loading in the PDX tokamak with high power neutral beam injection, 8:24864 (J:NL)
Limiters
Reduction of recycling by pumping at the PDX limiter, 8:24857 (J:NL)

Neutral Atom Beam Injection
Improved plasma generator for the PLT/PDX neutral beam injectors, 8:25113 (J:US)
Neutral Beam Sources
Development and operation of PDX neutral beam computer system, 8:25102 (J:US)
Improved plasma generator for the PLT/PDX neutral beam injectors, 8:25113 (J:US)
Installation and start-up of the PDX neutral beam injection system, 8:25081 (J:US)
Plasma Diagnostics
For the PDX CO/sub 2/ laser experiment. Optical mounts and shutter-window-grating system design, 8:24815 (J:US)

PEARL SPAR
See DOLOMITE

PEATLANDS
See WETLANDS

PELLET INJECTION
Mechanical configuration and shielding for FED fuel injectors and diagnostic instrumentation, 8:24962 (J:US)
Pneumatic hydrogen pellet injector development at Oak Ridge National Laboratory, 8:25118 (J:US)

PELLETS (FUEL)
See FUEL PELLETS

PENNSYLVANIA
Black Shales
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)
Natural Gas Deposits
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)

PENTAMETHYLENEIMINES

Petroleum supply monthly (November 1982), 8:23033 (R:US)

PETROLEUM REFINERIES
Petroleum supply monthly (December 1982), 8:23034 (R:US)
Cogeneration
Potential for cogeneration in distillation. Final report, 8:23863 (R:US)
Energy Accounting
Marginal energy cost of goods and services. Final report, 8:23037 (R:US)

PETT
See POSITRON COMPUTED TOMOGRAPHY

PHAGES
See BACTERIOPHAGES

PHANTOMS
Design
Calibration of phoswich detectors for the in vivo measurement of americium, plutonium and uranium: interlaboratory comparison using the Lawrence Livermore calibration, 8:24733 (RA:US)
Design and construction of a knee phantom for the calibration of Am-241 in bone, 8:24734 (RA:US)
Whole-Body Counting
Application of a multiple least-squares regression program to dual energy NaI-CsI(T1) measurements, 8:24368 (RA:US)
Assessment of surrogate structures for whole body counting, 8:24735 (RA:US)

PHASE CHANGE MATERIALS
Use with the specific phase change material (e.g. calcium chloride) when known.
Materials Testing
Compact latent-heat thermal storage systems utilizing phase changes within the temperature range of 320 K and 340 K. Final report, 8:23358 (R:US:GE)

PHENOL
Biodegradation
Kinetics of anaerobic decomposition of phenol, 8:22949 (R:US)
Chemical Reactions
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)

PHENOLS
See also CRESOLS
PHENOL
Hydrogenation
Hydrodeoxygenation of phenolic components of wood-derived oil, 8:23279 (R:US)
Removal
Zimpro's biophysical-treatment-system stress testing of the H-COAL wastewater, 8:22950 (R:US)
Zimpro's biophysical treatment and wet-air-regeneration-system engineering study for H-COAL wastewater, 8:22951 (R:US)

PHENYLENE RADICALS
Structural Chemical Analysis
Small-angle neutron scattering studies of a compatible polymer blend, atactic polystyrene-poly(2,6 dimethyl phenylene oxide), 8:24073 (J:GB)

PHI4-FIELD THEORY
Lattice Field Theory
Analysis of the lattice, strong coupling series for $g_0 phi^4$ field theory in d dimensions, 8:24634 (J:NL)

PHOSPHATES
For salts only; see also PHOSPHORIC ACID ESTERS.
See also SCANDIUM PHOSPHATES
SODIUM PHOSPHATES
Corrosive Effects
Comprehensive investigation of chemical environmental for stress corrosion cracking of α-brass: characteristics and practical meanings of non-ammoniacal activities, 8:23913 (RA:US)
Ecological Concentration
Biogeochemistry of trace metals in Chesapeake Bay. Final report, April 1, 1981-March 31, 1982, 8:24278 (R:US)

PHOSPHONIC ACID ESTERS
Chemical Preparation
Novel diphosphonic and triphosphonic esters and their preparation and uses (Patent), 8:24070 (TG:US)
Solvent Properties
Novel diphosphonic and triphosphonic esters and their preparation and uses (Patent), 8:24070 (TG:US)
Uses
Novel diphosphonic and triphosphonic esters and their preparation and uses (Patent), 8:24070 (TG:US)

PHOSPHORUS
Biological Effects
Effect of phosphorus and calcium on zinc metabolism in man, 8:24461 (J:US)
Nuclear Reaction Analysis
Analytical applications of neutron capture gamma-ray spectroscopy, 8:24049 (R:DE)

PHOSPHORUS 32
Body Burden
Body burden estimation of P-32 by measurement and calibration of Bremsstrahlung radiation produced in the head, 8:24369 (RA:US)

PHOSPHORUS OXIDES
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)

PHOTOANODES
Photolysis
Photochemical, photoelectrochemical and photobiological conversion. Final report, 8:23273 (R:US)

Protective Coatings
Photoelectrochemical behavior of n-Si electrodes protected with Pt-polypyrrole, 8:23286 (J:US)
PHOTOCHEMICAL ENERGY STORAGE
Photochemical energy storage: studies of inorganic photoassistance agents. Progress report, September 15, 1981-November 29, 1982, 8:23264 (R:US)
PHOTOELECTROCHEMICAL CELLS
Conversion and chemical storage of solar energy in a photoelectrochemical cell. Final report, 8:23275 (R:US)
Design
Electrochemical photovoltaic cells based on n-GaAs and the triiodide/iodide redox couple in acetonitrile, 8:23285 (J:US)
Performance
Electrochemical photovoltaic cells based on n-GaAs and the triiodide/iodide redox couple in acetonitrile, 8:23285 (J:US)
Photoanodes
Kinetic aspects of the n-GaAs/(S/Se)sub(n)sup(2-) photoelectrochemical cell, 8:23262 (R:FR)
Photoelectrochemical behavior of n-Si electrodes protected with Pt-polypyrrole, 8:23286 (J:US)
Photocathodes
Photochemical energy storage: studies of inorganic photoassistance agents. Progress report, September 15, 1981-November 29, 1982, 8:23264 (R:US)
PHOTOELECTRON SPECTROSCOPY
Electron Spectrometers
Photoelectron spectrometer for high-resolution angular resolved studies, 8:24209 (R:US)
PHOTOGRAPHIC FILMS

PHOTON-ION COLLISIONS
Dissociation
UV-laser photofragmentation of a 2-MeV H_2^+ beam, 8:24515 (R:US)
PHOTOSYNTHESIS
Biological Radiation Effects
Action spectra for photosynthetic inhibition. Final report, 8:24373 (R:US)
Inhibition
Action spectra for photosynthetic inhibition. Final report, 8:24373 (R:US)
Photochemical Reactions
The photochemical dissociation of water by means of visible light, 8:23210 (R:US)
Research Programs
Studies of photosystem II using artificial donors. Progress report and renewal proposal. MML Proposal No. BI82-414, 8:24340 (R:US)
PHOTOVOLTAIC CONVERSION
Technology Assessment
System study on the possibilities of intensified use of solar energy in the Federal Republic of Germany (FRG), 8:23312 (R:DE:In German)
PHOTOVOLTAIC POWER PLANTS
Computerized Simulation
Photovoltaic requirements estimation - a simplified method. Final report, 8:23292 (R:US)
Economic Analysis
Photovoltaic requirements estimation - a simplified method. Final report, 8:23292 (R:US)
Performance
Photovoltaic requirements estimation - a simplified method. Final report, 8:23292 (R:US)
PHOTOVOLTAIC POWER SUPPLIES
Combined Collectors
Experience with a grid-interactive solar photovoltaic electric system, 8:23296 (J:US)
Cost
Flat plate photovoltaic power systems: description, design and cost. Summary report, 8:23290 (R:US)
Design
Flat plate photovoltaic power systems: description, design and cost. Summary report, 8:23290 (R:US)
Westinghouse final report: design and fabrication of a prototype system for photovoltaic residences in the Southwest, 8:23291 (R:US)
Fabrication
Westinghouse final report: design and fabrication of a prototype system for photovoltaic residences in the Southwest, 8:23291 (R:US)
Feasibility Studies
Renewable energy system feasibility study. Final report 2 Sep 80-30 Apr 82, 8:23252 (R:US)
Performance
Intermediate photovoltaic system application experiment operational performance report. Volume 14. For Beverly High School, Beverly, Massachusetts for October 1982, 8:23293 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 16. For Beverly High School, Beverly, MA for December 1982, 8:23295 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 15. For Beverly High School, Beverly, MA for November 1982, 8:23294 (R:US)
Rankine Cycle Power Systems
STESEP; solar total energy system evaluation (CDC6600,7600;IBM370; FORTRAN IV), 8:23297 (R:US)
PICEANCE CREEK BASIN
Mineralogy
Mineralogy and petrology aspects of Mesaverde Formation at Rifle Gap, Colorado, specific to the sedimentology and gas-bearing intervals in the subsurface, 8:23060 (R:US)
Petrology
Mineralogy and petrology aspects of Mesaverde Formation at Rifle Gap, Colorado, specific to the sedimentology and gas-bearing intervals in the subsurface, 8:23060 (R:US)
Stratigraphy
Approximation of continuity of lenticular Mesaverde Group sandstone lenses utilizing close-well correlations, Piceance Basin, NW Colorado. SPE 11610, 8:23059 (R:US)
PIGE ANALYSIS

PIONS PLUS
Leptonic Decay
Rare decays of pions & muons: a review, 8:24581 (RA:US)
Radiative Decay
Rare decays of pions & muons: a review, 8:24581 (RA:US)
Weak Hadronic Decay
Quark-tadpole transitions and the $\Delta I = (1/2)$ rule in K decays, 8:24627 (J:US)
PIONS NEUTRAL
Particle Production
High p/sub T/ π^0 production with $\alpha\alpha$ and αp beams at the CERN ISR, 8:24577 (R:US)
PIONS PLUS
Semileptonic Decay
Preliminary report on a new pion beta decay experiment, 8:24583 (RA:US)
PIPE JOINTS
Stress Analysis
CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)
Thermal Analysis
CORTES; thermal & mechanical analysis of tees (IBM360,370; FORTRAN IV; Package of EP, THFA, SHFA, SA, and TSA codes), 8:24085 (R:US)
PIPELINES
Data Acquisition Systems
Use of computers for the documentation of supply lines, 8:23430 (R:DE:In German)
PIPERAZINES
Infrared Spectra
Use of infrared and Raman spectroscopy to study corrosion inhibitors on metal surfaces, 8:23901 (RA:US)
Raman Spectra
Use of infrared and Raman spectroscopy to study corrosion inhibitors on metal surfaces, 8:23901 (RA:US)
PIPERIDINES
Infrared Spectra
Use of infrared and Raman spectroscopy to study corrosion inhibitors on metal surfaces, 8:23901 (RA:US)
Raman Spectra
Use of infrared and Raman spectroscopy to study corrosion inhibitors on metal surfaces, 8:23901 (RA:US)
PIPES
See also DRILL PIPES
Design
Development of an optimizing method for the design of pipe systems in the ground used as heat source for heat pumps, 8:23855 (R:DE:In German)
Fluid Mechanics
Simulation of thermal-transient-induced-pipe-flow stratification using COMMIX-2, 8:23542 (R:US)
Heat Transfer
Frictional characteristics and heat transfer of antimisting fuels in tubes. Final report Aug 80-Sep 81, 8:23044 (R:US)
Installation
Development of an optimizing method for the design of pipe systems in the ground used as heat source for heat pumps, 8:23855 (R:DE:In German)
Operating Cost
Costs and indexes for domestic oil- and gas field equipment and production operations, 1982, 8:23017 (R:US)
Stress Analysis
BENDPAC; stress analysis of flanged pipe bends (IBM303x,370; FORTRAN IV (93%) and Assembly language (7%)), 8:24099 (R:US)
CURT2; curved tubes or elbows & attached pipes (IBM360,370; FORTRAN IV), 8:24084 (R:US)
Supports
SUPAN; analysis of beam-type piping supports (CDC7600; FORTRAN IV), 8:23400 (R:US)
Welded Joints
Analysis of a heat-transfer fluid fill pipe failure, 8:23914 (RA:US)
PITTSBURGH OXYDESULFURIZATION PROCESS
Feasibility Studies
Survey of coals treated by oxydesulfurization, 8:22992 (R:US)
Heat Losses
Survey of coals treated by oxydesulfurization, 8:22992 (R:US)
PITTSBURG-MIDWAY SOLVENT REFINED COAL PRO
See SRC PROCESS
PLANT CELLS
Genetic Radiation Effects
Genetic effects of the decay of radionuclides in cells, 8:24396 (TG:US)
PLANT TISSUES
Biological Radiation Effects
Protective mechanisms and acclimation to solar ultraviolet-b radiation in oenothera stricta. Final report, 8:24372 (R:US)
Biological Repair
Protective mechanisms and acclimation to solar ultraviolet-b radiation in oenothera stricta. Final report, 8:24372 (R:US)
PLANTS

Alfven Waves
Alfven wave heating in general toroidal plasmas, 8:24784 (J:US)
Boundary Layers
Numerical analysis of plasma-wall interaction for an oblique magnetic field, 8:24794 (J:NL)
Control Systems
Plasma control techniques of the ASDEX feedback system, 8:25167 (J:US)
Control Theory
Analysis of external hybrid poloidal coil system, 8:24994 (J:US)
Couette Flow
Reply to the Comments of B. K. Shivamoggi, 8:24791 (J:US)
Drift Instability
Saturation of the lower-hybrid-drift instability by mode coupling, 8:24777 (J:US)
Universal mode with diffusive electrons: linear instability and nonlinear saturation, 8:24780 (J:US)
Electron Density
Electron confinement studies on the EBT-S Bumpy Torus Experiment using soft x-ray techniques, 8:24790 (J:US)
Electron Drift
Effect of a transition between regular and stochastic electron motion on the evolution of an obliquely propagating Langmuir wave, 8:24783 (J:US)

Saturation of the lower-hybrid-drift instability by mode coupling, 8:24777 (J:US)
Universal mode with diffusive electrons: linear instability and nonlinear saturation, 8:24780 (J:US)
Electron Temperature
Electron confinement studies on the EBT-S Bumpy Torus Experiment using soft x-ray techniques, 8:24790 (J:US)
Energy Transport
Quasilinear momentum and energy transport, 8:24782 (J:US)
Flow Models
Theoretical model for hot plasma flowing to a wall with recycling, 8:24870 (J:NL)
Wall material characteristics in reacting plasma modelling, 8:24876 (J:NL)
Fluctuations
Quasilinear momentum and energy transport, 8:24782 (J:US)
Impurities
Sputter-induced erosion of alkali metal surfaces - AES, XPS and SIMS studies, 8:24759 (R:US)
Interactions
Influence of collisions and incoherence on ion-cyclotron transport in mirror plasmas, 8:24789 (J:US)
Review of the plasma-material interaction problems for reacting and burning plasma experiments, 8:24796 (J:NL)
Ion Drift
Saturation of the lower-hybrid-drift instability by mode coupling, 8:24777 (J:US)
Ion Temperature
Ion heating due to parametrically driven ion wave turbulence, 8:24778 (J:US)
Laser Radiation
Some nonlinear estimates for lateral propagation of self-generated B fields, 8:24764 (R:US)
Magnetohydrodynamics
Tearing modes in a general cross-section force-free cylindrical tokamak, 8:24786 (J:US)
Momentum Transfer
Quasilinear momentum and energy transport, 8:24782 (J:US)
Nonlinear Problems
Saturation of the lower-hybrid-drift instability by mode coupling, 8:24777 (J:US)
Universal mode with diffusive electrons: linear instability and nonlinear saturation, 8:24780 (J:US)
Plasma Instability
Ion-temperature-gradient instability in toroidal plasmas, 8:24779 (J:US)
Plasma Waves
Effect of a transition between regular and stochastic electron motion on the evolution of an obliquely propagating Langmuir wave, 8:24783 (J:US)
Positioning
Shaping and controlling Dee-shaped tokamak plasmas, 8:25058 (J:US)
Stability
Reply to the Comments of B. K. Shivamoggi, 8:24791 (J:US)
Thermal stability of peripheral plasmas, 8:24795 (J:NL)
Tearing Instability
Tearing modes in a general cross-section force-free cylindrical tokamak, 8:24786 (J:US)
Temperature Gradients
Ion-temperature-gradient instability in toroidal plasmas, 8:24779 (J:US)
Transients
Reply to the Comments of B. K. Shivamoggi, 8:24791 (J:US)
Transport Theory
Influence of collisions and incoherence on ion-cyclotron transport in mirror plasmas, 8:24789 (J:US)
Turbulence
Ion heating due to parametrically driven ion wave turbulence, 8:24778 (J:US)
Universal mode with diffusive electrons: linear instability and nonlinear saturation, 8:24780 (J:US)
PLASMA ACCELERATION
Electrons
Statistical acceleration of electrons by lower-hybrid turbulence, 8:24806 (J:GB)

PLATINUM
Biological Effects
Environmental insults to DNA, 8:24413 (RA:US)
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Electric Conductivity
Temperature dependence of electrical resistivity of vanadium, platinum and copper, 8:23978 (J:US)

PLESIOTHERAPY
See RADIOTHERAPY

PLOTTERS
Computer Codes
GRFPAK; plot package for CORTES FEM programs (IBM360,370; FORTRAN IV), 8:24086 (R:US)
PRPLOT; line printer plot subroutine package (IBM370,360; FORTRAN IV), 8:25238 (R:US)

PLT DEVICES
Current-Drive Heating
Lower hybrid heating and current drive on PLT, 8:24766 (R:US)
High-Frequency Heating
High voltage rf coaxial vacuum bushing design considerations, 8:25095 (J:US)
Lower hybrid heating and current drive on PLT, 8:24766 (R:US)
ICR Heating
1.2 megawatt, 800 MHz rf generator for lower hybrid resonance heating, 8:25097 (J:US)
Design of a 9 inch stub tuner for PLT icrh operation, 8:25096 (J:US)
Neutral Atom Beam Injection
Improved plasma generator for the PLT/PDX neutral beam injectors, 8:25113 (J:US)
Neutral Beam Sources
Improved plasma generator for the PLT/PDX neutral beam injectors, 8:25113 (J:US)
Plasma Diagnostics
Spectra of germanium and selenium in the 50-350 A region from the PLT tokamak plasma, 8:24770 (R:US)
RF Systems
Lower hybrid rf monitoring system for PLT, 8:24954 (J:US)

PLUMES
Biological Effects
Improved method for predicting seasonal and annual shadowing from cooling-tower plumes, 8:24401 (R:US)
Environmental Impacts
Improved method for predicting seasonal and annual shadowing from cooling-tower plumes, 8:24401 (R:US)
Environmental Transport
ATM; atmospheric transport & diffusion model (IBM360,370; FORTRAN IV (96%) and BAL (4%)), 8:24227 (R:US)
SULCAL; model of sulfur chemistry in a plume (IBM360,370; FORTRAN IV), 8:24228 (R:US)
Mathematical Models
Common problems in modeling of thermal plumes in air and water, 8:24252 (R:US)
Survey of plume models for atmospheric application, 8:24225 (R:US)

PLUTONIUM
Bioassay
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)
Complexometry
Behavior of tetravalent plutonium with various ion exchangers in solutions containing nitric acid and oxalates, 8:24053 (TG:US)
Distribution Functions
Behavior of tetravalent plutonium with various ion exchangers in solutions containing nitric acid and oxalates, 8:24053 (TG:US)
Ion Exchange
Behavior of tetravalent plutonium with various ion exchangers in solutions containing nitric acid and oxalates, 8:24053 (TG:US)
Mass Spectroscopy
Isotopic analysis of micrometer and submicrometer particles by direct-inlet mass spectrometry, 8:24052 (R:US)
Nuclear Materials Management
Operational advanced materials control and accountability system, 8:23198 (J:US)
Purex Process
PUBG; purex solvent extraction process model (IBM3033;CDC CYBER175; FORTRAN IV), 8:23111 (R:US)
Quantitative Chemical Analysis
Selected measurement methods for plutonium and uranium in the nuclear fuel cycle, 8:23197 (R:US)
Radiation Detection
Calibration of phoswich detectors for the in vivo measurement of americium, plutonium and uranium: interlaboratory comparison using the Lawrence Livermore calibration, 8:24733 (RA:US)
Uptake
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)

PLUTONIUM 238
Radioisotope Heat Sources
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)

PLUTONIUM 239
Radionuclide Migration
Comparative behavior of plutonium and americium in the equatorial Pacific, 8:24295 (R:US)
Teratogenesis
Effects of monomeric ^{239}Pu on the fetal rabbit, 8:24394 (J:GB)

PLUTONIUM 240
Radionuclide Migration
Comparative behavior of plutonium and americium in the equatorial Pacific, 8:24295 (R:US)

PLUTONIUM DIOXIDE
Vapor Pressure
Vapor pressures and vapor compositions in equilibrium with hypostoichiometric plutonium dioxide at high temperatures, 8:24001 (R:US)

Deep-burial diagenesis. Annual progress report, 1982-1983, 8:24498 (R:US)
Temperature Dependence
Deep-burial diagenesis. Annual progress report, 1982-1983, 8:24498 (R:US)
POROUS MATERIALS
Gas Flow
Monte Carlo simulation of diffusion of gases in a porous solid: Calculations for a new class of solids, 8:24742 (J:US)
PORPHYRINS
See also CHLOROPHYLL
Photolysis
Electron-transfer reactions of chlorophyll a and porphyrin triplets with radicals in aqueous micellar solutions, 8:23283 (J:US)
PORPOISES
See CETACEANS
PORTUGAL
Energy Policy
Argonne Energy Model - Portugal, 8:23692 (R:US)
POSITRON CHANNELING
Photon Emission
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
POSITRON COMPUTED TOMOGRAPHY
Equipment
Detectors, sampling, shielding, and electronics for positron emission tomography, 8:24342 (R:US)
Scintillation Counters
Facility for positron computed tomography, 8:24347 (P:DE:In German)
POSITRONS
Annihilation
Characterization of defects in metals by positron-annihilation spectroscopy, 8:23953 (R:US)
POTABLE WATER
See DRINKING WATER
POTASSIUM
Catalytic Effects
Comparison of iron Fischer-Tropsch catalysts using on-line gas chromatography, 8:23219 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
POTASSIUM 43
Decay
^{43}K, a new probe for the system KFe, 8:24665 (RA:DE:In German)
POTASSIUM BROMIDES
Physical Radiation Effects
Color-center production and lattice expansion in KBr by x-irradiation near room temperature, 8:24076 (R:US)
POTASSIUM CHLORIDES
Crystal Defects
Charge transfer complexes of molecular oxygen in $NaClO_3$ and $KClO_3$ studied by resonance Raman and infrared spectroscopy, 8:24061 (J:US)
Photolysis
Charge transfer complexes of molecular oxygen in $NaClO_3$ and $KClO_3$ studied by resonance Raman and infrared spectroscopy, 8:24061 (J:US)
POTASSIUM COMPOUNDS
See also POTASSIUM BROMIDES
POTASSIUM CHLORIDES
POTASSIUM SULFIDES
Phonons
Raman measurements of folded interlayer shearing phonons in KC_{12}/sub n/ (n = 2 approx. 6), 8:24032 (R:US)
POTASSIUM IONS
Electron-Ion Collisions
Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence, 8:24554 (J:US)
POTASSIUM SULFIDES
Thermodynamic Properties
Provisional values for the thermodynamic properties of potassium sulfide, 8:23776 (R:US)
POTENTIAL FLOW
Computer Codes
TRUMP; transient & steady state temperature distribution (IBM360,370;CDC7600; FORTRAN IV (95%) and BAL (5%) (IBM); FORTRAN IV (CDC)), 8:24135 (R:US)
POTOMAC RIVER
Nutrients
Biogeochemistry of trace metals in Chesapeake Bay. Final report, April 1, 1981-March 31, 1982, 8:24278 (R:US)
POWER AMPLIFIERS
Power Factor
Poloidal-field thyristor amplifier with improved power factor, for TEXTOR, 8:25062 (J:US)
POWER DEMAND
Forecasting
1981 commercial and industrial survey: customers of municipal and cooperative distributors of TVA power, 8:23752 (R:US)
Regional analysis of potential impacts of electric and hybrid vehicles on electric utilities, 8:23729 (R:US)
POWER GENERATION
See also COGENERATION
Forecasting
EIA symposium on short-term energy forecasting. Summary of the proceedings, 8:23721 (R:US)
POWER PLANTS

Data Compilation
Nuclear reactors built, being built, or planned in the Unites States as of June 30, 1981, 8:23443 (R:US)

Reactor Components
Reactor-safety research programs. Quarterly report, July-September 1982, 8:23549 (R:US)

Reactor Kinetics
Reactor-safety research programs. Quarterly report, July-September 1982, 8:23549 (R:US)

Reactor Materials
Reactor-safety research programs. Quarterly report, July-September 1982, 8:23549 (R:US)

POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
SPACECRAFT POWER SUPPLIES
INTOR power handling and conversion, 8:25071 (J:US)
Optically insulated power supply for high voltage instruments, 8:25073 (J:US)

Design
10 kA pulsed power supply for superconducting coils, 8:25070 (J:US)
10-kA pulsed power supply for superconducting coils, 8:24821 (R:US)
Design, fabrication and erection of flywheel-generator-convertors for the JET tokamak, 8:25060 (J:US)
Power supplies for the Varennes tokamak a quasi-continuous operation experiment, 8:25065 (J:US)

Electrical Testing
2.0 MVA voltage doubler power supply for capacitor bank charging, 8:25068 (J:US)
Commissioning tests for the TEXTOR toroidal field power supply system, 8:25063 (J:US)
Development of a high voltage crowbar, 8:25066 (J:US)

Interlocks
CAMAC-based interlock system for power supply hardware protection on MFTF, 8:25188 (J:US)

Operation
TEXT poloidal field power systems operation, 8:25026 (J:US)
TEXT toroidal field power supply operation, 8:25027 (J:US)

POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also DC SYSTEMS
INTERCONNECTED POWER SYSTEMS
RANKINE CYCLE POWER SYSTEMS

Electrical Equipment
Investigation of the interaction between the power electronic circuit and power supply systems, 8:23431 (R:DE:In German)

Interference
Electrical system waveform distortion, 8:23822 (RA:US)

Operating Cost
Comparison of algorithms for computing generating-system reliability indexes. Final report, 8:23745 (R:US)

Optimization
STOPS; power system short-term optimization (IBM303x,360,370; FORTRAN IV), 8:23402 (R:US)

Power Factor
Investigation of the interaction between the power electronic circuit and power supply systems, 8:23431 (R:DE:In German)

Reliability
Comparison of algorithms for computing generating-system reliability indexes. Final report, 8:23745 (R:US)

POWER TRANSMISSION LINES

Data Acquisition Systems
Use of computers for the documentation of supply lines, 8:23430 (R:DE:In German)

Environmental Impact Statements
Transmisson-Facilities Vegetation-Management Program: Bonneville Power Administration. Draft environmental impact statement, 8:24309 (R:US)

POWER TRANSMISSION TOWERS

Foundations
Transmission-line structure foundations for uplift-compression loading. Final report, 8:23437 (R:US)

POWERED SUPPORTS

Specifications
Method of investigations, estimation and classification of roofs in mines in the United States of America for the selection of suitable mechanized support for longwalls. Report No. 2. State-of-the-art report on roof rock stability tests and powered support selection systems for longwalls, 8:22978 (R:US)

PRECIPITATION
In chemical processes only; see also ATMOSPHERIC PRECIPITATIONS and CHARGED-PARTICLE PRECIPITATION.

Particle Size
Ostwald ripening of precipitates and irreversible phenomena, 8:24056 (R:US)

Thermodynamics
Ostwald ripening of precipitates and irreversible phenomena, 8:24056 (R:US)

PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS

PREFABRICATED BUILDINGS

Solar Water Heating
Measuring program for hot water supply in prefabricated houses using solar energy, 8:23313 (R:DE:In German)

PRESSURE TUBES

Materials Testing
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R:US)

PRESSURE VESSELS

Bellows
Fatigue testing of TFTR vacuum vessel bellows, 8:25160 (J:US)

Crack Propagation
Investigation of fatigue crack growth in a 288°C PWR water environment by a constant ΔK test method, 8:23906 (RA:US)

Fatigue
Investigation of fatigue crack growth in a 288°C PWR water environment by a constant ΔK test method, 8:23906 (RA:US)

Leak Testing
Leak detection inside a vacuum vessel, 8:25208 (J:US)

Mechanical Properties
Mechanical response of cavity tube banks in heavy ion beam fusion reactors, 8:25204 (J:US)

Mechanical Vibrations
Analysis of ambient vibrational motion of MFTF-A vessel/magnet structure, 8:24839 (R:US)

Physical Radiation Effects
Effect of neutron irradiation on dynamic fracture toughness of A533 Grade B Class 1 pressure vessel steel , 8:23919 (RA:US)
Temperature Effects
Thermomechanical behavior of refractory concrete linings, 8:22939 (J:US)
PRESSURIZED WATER COOLED MODERATED REACTOR

Observations and analyses of the corrosion behavior of PWR fuel, 8:23487 (RA:US)
Projected national and world benefits to the LWR fuel cycle from extended burnup, 8:23533 (RA:US)
PWR high burnup licensing assessment, 8:23490 (RA:US)
Regulatory perspective on extended burnup fuel, 8:23522 (RA:US)
Risoe Fission Gas Project: an overview, 8:23462 (RA:US)
Tentative evaluation of consequences of extended burnup on reprocessing of LWR spent fuel, 8:23463 (RA:US)

Fuel-Cladding Interactions
High burnup effects on the pellet-cladding interaction phenomenon, 8:23484 (RA:US)

Ice Condensers
Hydrogen combustion during degraded core accidents in PWR ice condenser plants, 8:23655 (J:US)

In-Service Inspection
Nondestructive evaluation program: progress in 1982, 8:23464 (R:US)

Legal Aspects
Operating reactors licensing actions summary, 8:23527 (R:US)

Loss of Coolant
Analysis of the BCL transient ECC bypass test with the TRAC-PD2/MOD1 code, 8:23652 (J:US)
Application of a honeycomb insulator design in a variable high-temperature, high-pressure environment, 8:23658 (J:US)

CONTEMPT4/MOD2; multicompartment containment (CDC7600; FORTRAN IV (96%) and COMPASS (4%)), 8:23584 (R:US)
Hydrogen combustion during degraded core accidents in PWR ice condenser plants, 8:23655 (J:US)
LOCA analysis of annular fuel pellet design for extended burnup, 8:23606 (RA:US)
REFLUX; LWR reflood heat transfer prediction (IBM360; FORTRAN IV), 8:23445 (R:US)
Thermal and mechanical behaviour of PWR fuel rod simulators for LOCA-experiments, 8:23619 (R:DE)
TRAC-PD2/MOD1; best-estimate analysis PWR LOCA (CDC7600; FORTRAN IV (FTN 4.5 FORTRAN compiler) with selected COMPASS replacement routines), 8:23585 (R:US)

Loss of Flow
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)
Scaling criteria for LWR's under single-phase and two-phase natural circulation, 8:23603 (R:US)

Nuclear Models
Three-dimensional modeling of thermal and fluid mixing in PWRs during high-pressure coolant injection, 8:23640 (J:US)

Pressure Vessels
Investigation of fatigue crack growth in a 288°C PWR water environment by a constant ΔK test method, 8:23906 (RA:US)

Reactor Accidents
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
RELAP5 assessment: FLECHT SEASET steam-generator test 23402, 8:23632 (R:US)

Reactor Components
Fracture toughness of PWR-components supports, 8:23505 (R:US)

Reactor Control Systems
Using cognitive modeling to improve the man-machine interface, 8:23561 (RA:US)

Reactor Cooling Systems
Liquid level sensing device, 8:23506 (P:US)

Reactor Core Disruption
Hydrogen combustion during degraded core accidents in PWR ice condenser plants, 8:23655 (J:US)

Reactor Decommissioning
Funding nuclear-power-plant decommissioning. Final report, 8:23536 (R:US)

Reactor Instrumentation
Development of an improved-contact liquid-level probe for pressurized reactor vessels, 8:23495 (R:US)

Reactor Licensing
PWR high burnup licensing assessment, 8:23490 (RA:US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), February 1-February 28, 1983, 8:23526 (R:US)

Reactor Maintenance
Cleaning steam generators off-line (soaking) with chelants. Final report, 8:23497 (R:US)

Reactor Materials
Fracture toughness of PWR-components supports, 8:23505 (R:US)
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R:US)

Reactor Operation
Licensed operating reactors. Status summary report data as of October 31, 1982, 8:23523 (R:US)
Operating reactors licensing actions summary, 8:23527 (R:US)
Regulatory perspective on extended burnup fuel, 8:23522 (RA:US)

Reactor Safety
Organization and structure of an EPRI DATATRAN data bank, 8:23613 (R:US)
Safety-Evaluation Report related to the D2/D3 steam-generator design modification, 8:23624 (R:US)
Selected review and evaluation of US safety research vis-a-vis foreign safety research for nuclear power plants, 8:23636 (R:US)
Towards intrinsically safe light-water reactors, 8:23637 (R:US)

Reactor Shutdown
Heat transfer to water from a vertical tube bundle under natural-circulation conditions (PWR;BWR), 8:23635 (R:US)

Spent Fuel Elements
Tentative evaluation of consequences of extended burnup on reprocessing of LWR spent fuel, 8:23463 (RA:US)

Steam Generators
Cleaning steam generators off-line (soaking) with chelants. Final report, 8:23497 (R:US)
Flow-induced vibration of a curved tube array subject to liquid cross flow, 8:23469 (R:US)
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
Safety-Evaluation Report related to the D2/D3 steam-generator design modification, 8:23624 (R:US)
Thermal and hydraulic code verification: ATHOS2 and model boiler No. 2 data. Volume 3. Final report, 8:23503 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report, 8:23502 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report, 8:23501 (R:US)
Thermal-hydraulic code qualification: ATHOS2 and data from Bugey 4 and Tricastin 1. Final report, 8:23499 (R:US)

Steam Turbines
Scale modeling of turbine-missile impact into concrete. Final report, 8:23611 (R:US)

Transients
International over-ramp project at Studsvik, 8:23483 (RA:US)
PWR systems transient analysis: a reactor-safety perspective, 8:23600 (R:US)

PYRENE

Mutagen Screening
Mammalian cell genetic toxicology, 8:24416 (RA:US)

Photolysis
Electron-transfer reactions of chlorophyll a and porphyrin triplets with radicals in aqueous micellar solutions, 8:23283 (J:US)

PYRITE

Dielectric Properties
Selective magnetic enhancement of pyrite in coal by dielectric heating, 8:22991 (R:US)

Differential Thermal Analysis
Selective magnetic enhancement of pyrite in coal by dielectric heating, 8:22991 (R:US)

Magnetic Susceptibility
Selective magnetic enhancement of pyrite in coal by dielectric heating, 8:22991 (R:US)

Removal
Selective magnetic enhancement of pyrite in coal by dielectric heating, 8:22991 (R:US)

PYRITES
See PYRITE

PYROLYSIS
See also FLASH HYDROPYROLYSIS PROCESS

Bibliographies
Bibliography coal pyrolysis 1980-1981, 8:22910 (RA:CA)

Comparative Evaluations
The flash pyrolysis and hydropyrolysis of coal, 8:22901 (RA:CA)

Meetings
Application of pyrolysis technology to the utilization of eastern Canadian coals, 8:22900 (R:CA)

PYROLYSIS PRODUCTS
See also CHARS

Hydrogenation
Hydrodeoxygenation of phenolic components of wood-derived oil, 8:23279 (R:US)

Market
Opportunities for pyrolysis technology in producing gas and combustible residues for use in electric power generation, 8:22909 (RA:CA)

PYRROLES

Electrochemistry
Electropolymerization of pyrrole in the presence of fluoborate, 8:24075 (J:US)

Polymerization
Electropolymerization of pyrrole in the presence of fluoborate, 8:24075 (J:US)

Q

QUADRUPOLE LINACS
Beam Bunching
Use of the radio-frequency quadrupole structure as a cyclotron axial-buncher system, 8:24168 (R:US)
QUANTUM CHROMODYNAMICS
Helicity
Quantum chromodynamics and the helicity structure of psi--$\gamma 2^{++}$, 8:24629 (J:US)
QUANTUM MECHANICS
Three-Body Problem
Particle-two particle interaction in configuration space, 8:24748 (R:DE)
Test of three-body separable pole expansions at negative and positive energies, 8:24749 (R:DE)
QUARK CONFINEMENT
See BAG MODEL
QUARK MODEL

RADIOACTIVE WASTE DISPOSAL
Environment and safety: major goals for MARS, 8:24846 (R:US)

Actinides
Actinide-solubility controls in performance assessment of nuclear-waste repositories, 8:23168 (R:US)
Basalt
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)
Summary of past Basalt Waste Isolation Project overviews during preliminary site characterization, 8:23175 (R:US)
Containers
Canister materials proposed for final disposal of high level nuclear waste, 8:23144 (RA:DE)
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
HAW-containers as a barrier in final storage, 8:24108 (RA:DE:In German)
Corrosion Resistance
Interaction of vitrified high level waste with clay environment, 8:23141 (RA:DE)
Coverings
Design surface covers: an approach to long-term waste site stabilization, 8:23172 (R:US)
Engineered Safety Systems
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Feasibility Studies
Summary of past Basalt Waste Isolation Project overviews during preliminary site characterization, 8:23175 (R:US)
Geologic Deposits
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R:US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R:US)
Relationship of an in-situ test facility to a deep geologic repository for high-level nuclear waste. Final report (Task 4), June 1981-October 1982, 8:23151 (R:US)
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R:US)
High-Level Radioactive Wastes
Actinide sorption on rock minerals, 8:23146 (RA:DE)
Application of systems analysis to the disposal of high level waste in deep ocean sediments, 8:23178 (J:GB)
Backfill barriers for nuclear waste repositories in salt, 8:23138 (RA:DE)
Calculation of the probability of volcanic disruption of a high-level radioactive waste repository within southern Nevada, USA, 8:23189 (J:GB)
Canister materials proposed for final disposal of high level nuclear waste, 8:23144 (RA:DE)
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
Criteria for high level waste disposal and characterization of barriers, 8:23129 (RA:DE)
HAW-containers as a barrier in final storage, 8:24108 (RA:DE:In German)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R:US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R:US)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Relationship of an in-situ test facility to a deep geologic repository for high-level nuclear waste. Final report (Task 4), June 1981-October 1982, 8:23151 (R:US)
Requirements for the disposal of high-level radioactive wastes, 8:23139 (RA:DE)
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R:US)
Low-Level Radioactive Wastes
Disposal of low-level radioactive biomedical wastes (an Academy Forum held November 24, 1980), 8:23157 (R:US)
Environmental monitoring considerations for low-level waste disposal sites, 8:23183 (R:US)
Massachusetts low-level radioactive-waste-management survey. National Low-Level Radioactive Waste Management Program, 8:23122 (R:US)
Trench design and construction techniques for low-level radioactive waste disposal (Shallow land burial), 8:23155 (R:US)
Marine Disposal
Application of systems analysis to the disposal of high level waste in deep ocean sediments, 8:23178 (J:GB)
Why not in the ocean, 8:23182 (J:XA)
Materials Testing
Leaching of polyphase nuclear waste ceramics: microstructural and phase characterization, 8:23181 (J:US)
Matrix Materials
FUETAP concrete - an alternative radioactive waste host, 8:23131 (RA:DE)
Meetings
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Mill Tailings
Decision-tree approach to evaluating inactive uranium-processing sites for liner requirements, 8:23161 (R:US)
Design surface covers: an approach to long-term waste site stabilization, 8:23172 (R:US)
Public Opinion
Organizational approach to estimating public resistance at proposed disposal sites for radioactive and hazardous wastes, 8:23120 (R:US)
Radionuclide Migration
Actinide sorption on rock minerals, 8:23146 (RA:DE)
Actinide-solubility controls in performance assessment of nuclear-waste repositories, 8:23168 (R:US)
Application of systems analysis to the disposal of high level waste in deep ocean sediments, 8:23178 (J:GB)
Criteria for high level waste disposal and characterization of barriers, 8:23129 (RA:DE)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Reliability
Evaluation of the barriers in an ultimate storage for radioactive waste, 8:23143 (RA:DE:In German)
Research Programs
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R:US)
Risk Assessment
Calculation of the probability of volcanic disruption of a high-level radioactive waste repository within southern Nevada, USA, 8:23189 (J:GB)
Rock Mechanics
Composition of rocks - criteria for the conditioning of high-level radioactive wastes, 8:23140 (RA:DE:In German)
Safety
Requirements for the disposal of high-level radioactive wastes, 8:23139 (RA:DE)
Salt Deposits
Effects of the product properties upon the ultimate storage medium salt and resulting conditions, 8:23142 (RA:DE:In German)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R:US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R:US)
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R:US)

Shaft Excavations
Evaluation of alternative shaft-sinking techniques for high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 3), June 1981-July 1982, 8:23150 (R:US)
Site Selection
Mathematical model for evaluating the suitability of a low-level radioactive waste site, 8:23119 (R:US)
Methods for assessing the socioeconomic impacts of large-scale resource developments: implications for nuclear repository siting, 8:24303 (R:US)
Systems Analysis
Application of systems analysis to the disposal of high level waste in deep ocean sediments, 8:23178 (J:GB)
Technology Transfer
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Underground Disposal
Composition of rocks - criteria for the conditioning of high-level radioactive wastes, 8:23140 (RA:DE:In German)
Technical progress report for the quarter 1 January-31 March 1982, 8:23156 (R:US)
Trench design and construction techniques for low-level radioactive waste disposal (Shallow land burial), 8:23155 (R:US)

RADIOACTIVE WASTE FACILITIES
Construction
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R:US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R:US)
Trench design and construction techniques for low-level radioactive waste disposal (Shallow land burial), 8:23155 (R:US)
Cost
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Decommissioning
Decontamination and decommissioning of TAN radioactive liquid-waste-evaporator system (PM-2A). Final report, 8:23123 (R:US)
Decontamination
Decontamination and decommissioning of TAN radioactive liquid-waste-evaporator system (PM-2A). Final report, 8:23123 (R:US)
Design
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 2), June 1981-November 1982, 8:23153 (R:US)
In-situ test programs related to design and construction of high-level nuclear waste (HLW) deep geologic repositories. Appendices. Final report (Task 2), June 1981-November 1982, 8:23154 (R:US)
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Trench design and construction techniques for low-level radioactive waste disposal (Shallow land burial), 8:23155 (R:US)
Economic Impact
Methods for assessing the socioeconomic impacts of large-scale resource developments: implications for nuclear repository siting, 8:24303 (R:US)
Monitoring
Environmental monitoring considerations for low-level waste disposal sites, 8:23183 (R:US)
Social Impact
Methods for assessing the socioeconomic impacts of large-scale resource developments: implications for nuclear repository siting, 8:24303 (R:US)
Test Facilities
Relationship of an in-situ test facility to a deep geologic repository for high-level nuclear waste. Final report (Task 4), June 1981-October 1982, 8:23151 (R:US)

RADIOACTIVE WASTE MANAGEMENT
Alpha-Bearing Wastes
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
High-Level Radioactive Wastes
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Inventories
Byproduct inventories, 8:23171 (R:US)
Legislation
Information report on state legislation, 8:23149 (R:US)
Low-Level Radioactive Wastes
Comprehensive low-level waste management plan for the state of Kentucky. Fifth quarterly report for the period ending December 31, 1982, 8:23121 (R:US)
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Massachusetts low-level radioactive-waste-management survey. National Low-Level Radioactive Waste Management Program, 8:23122 (R:US)
Meetings
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Public Opinion
Too hot to handle. Social and policy issues in the management of radioactive wastes, 8:23177 (B:US)
Regional Cooperation
Comprehensive low-level waste management plan for the state of Kentucky. Fifth quarterly report for the period ending December 31, 1982, 8:23121 (R:US)
Research Programs
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Spent Fuels
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Technology Transfer
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)

RADIOACTIVE WASTE PROCESSING
Alpha-Bearing Wastes
Los Alamos Controlled Air Incinerator for radioactive waste. Volume I. Rationale, process, equipment, performance, and recommendations, 8:23147 (R:US)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
By-Products
Technology for recovery of byproducts, 8:23173 (R:US)
Combustion
Los Alamos Controlled Air Incinerator for radioactive waste. Volume I. Rationale, process, equipment, performance, and recommendations, 8:23147 (R:US)
Cost Benefit Analysis
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)
Fuel Feeding Systems
Design and performance of feed-delivery systems for simulated radioactive waste slurries, 8:23160 (R:US)

High-Level Radioactive Wastes
Capacity of the borosilicate glass VG 98/12 for components of the high-level radioactive waste, 8:23130 (RA:DE:In German)
Ceramic nuclear waste forms, 8:23134 (RA:DE)
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)
Compared quantitative determination of nuclear waste glass crystallization rate by light microscopy and X-ray diffraction, 8:23132 (RA:DE)
Design and performance of feed-delivery systems for simulated radioactive waste slurries, 8:23160 (R:US)
Diopside glass-ceramic material for the immobilization of radioactive wastes, 8:23133 (RA:DE)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Overview on product forms, 8:23126 (RA:DE:In German)
Review of multibarrier waste form development, 8:23135 (RA:DE)
Using process instrumentation to obviate destructive examination of canisters of HLW glass, 8:23169 (R:US)
Iodine 129
Iodine-fixation studies at the Pacific Northwest Laboratory, 8:23165 (R:US)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Krypton
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Krypton 85
Potential for beneficial use of krypton-85, 8:23170 (R:US)
Laser Isotope Separation
Laser isotope separation in nuclear-waste by-product utilization, 8:23176 (R:US)
Low-Level Radioactive Wastes
Solidification of oils and organic liquids, 8:23118 (R:US)
Meetings
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Mill Tailings
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Sludges
Waste sludge composition at the Savannah River Plant, 8:23180 (J:US)
Solidification
Capacity of the borosilicate glass VG 98/12 for components of the high-level radioactive waste, 8:23130 (RA:DE:In German)
Ceramic nuclear waste forms, 8:23134 (RA:DE)
Design and performance of feed-delivery systems for simulated radioactive waste slurries, 8:23160 (R:US)
Diopside glass-ceramic material for the immobilization of radioactive wastes, 8:23133 (RA:DE)
FUETAP concrete - an alternative radioactive waste host, 8:23131 (RA:DE)
Nuclear waste management. Quarterly progress report, October through December 1980, 8:23158 (R:US)
Overview on product forms, 8:23126 (RA:DE:In German)
Review of multibarrier waste form development, 8:23135 (RA:DE)
Solidification of oils and organic liquids, 8:23118 (R:US)
Thermal analysis, thermogravimetry and crystal chemical characterization of phases, 8:23136 (RA:DE)
Using process instrumentation to obviate destructive examination of canisters of HLW glass, 8:23169 (R:US)
Surface Coating
Review of multibarrier waste form development, 8:23135 (RA:DE)
Technology Transfer
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Vitrification
Compared quantitative determination of nuclear waste glass crystallization rate by light microscopy and X-ray diffraction, 8:23132 (RA:DE)
Development of the borosilicate glass for the vitrification plant PAMELA, 8:23127 (RA:DE:In German)

RADIOACTIVE WASTE STORAGE
Containers
Design and testing of the TX-4 Type A container for packaging radioactive waste, 8:24114 (R:US)
Cost
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
High-Level Radioactive Wastes
Concepts for the ultimate storage in geological formations, 8:23137 (RA:DE:In German)
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Storage Facilities
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Underground Disposal
Concepts for the ultimate storage in geological formations, 8:23137 (RA:DE:In German)
Underground Storage
Summarized representation of the progress and results of the suitability test of the Konrad pit for final storage of radioactive wastes, 8:23125 (R:DE:In German)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Containers
Design and testing of the TX-4 Type A container for packaging radioactive waste, 8:24114 (R:US)
Leaching
Critical review of radiation effects on borosilicate glasses, 8:24004 (RA:DE)
Radiation Effects
Critical review of radiation effects on borosilicate glasses, 8:24004 (RA:DE)

RADIOISOTOPE HEAT SOURCES
Capsules
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)
Quality Control
Heat-source specification 500 watt(e) RTG, 8:23201 (R:US)
Research Programs
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)
Specifications
Heat-source specification 500 watt(e) RTG, 8:23201 (R:US)

RADIOISOTOPE MIGRATION
See RADIONUCLIDE MIGRATION

RADIOLOGICAL PERSONNEL
Mortality
Hanford-worker health study: a status report, 8:24391 (R:US)
Radiation Protection
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)

RADIOLOGICAL PROTECTION
See RADIATION PROTECTION

RADIONUCLIDE MIGRATION
In environment.
Analysis of radiation exposure for troop observers, Exercise Desert Rock VI, Operation Teapot. Final report 1 Mar-15 Jul 80, 8:24359 (R:US)
Mathematical Models
Mathematical model for evaluating the suitability of a low-level radioactive waste site, 8:23119 (R:US)

RADIONUCLIDE TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
Optimization
Radiation therapy: model standards for determination of need, 8:24341 (R:US)
Standards
Radiation therapy: model standards for determination of need, 8:24341 (R:US)
RADIOWAVE RADIATION
Health Hazards
Potential human study populations for non-ionizing (radio frequency) radiation health effects, 8:24480 (R:US)
RADIUM
Carcinogenesis
Radium dial workers, 8:24364 (R:US)
RADIUM 226
Radioecological Concentration
Distribution and possible causes of radionuclides in groundwaters of Missouri, 8:24296 (J:US)
Distribution of ^{226}Ra in the lower paleozoic aquifers of southeast Kansas and adjacent areas, 8:24297 (J:US)
Radioactivity in groundwater associated with uranium and phosphate mining and processing, 8:24298 (J:US)
Radionuclide Migration
Distribution of ^{226}Ra in the lower paleozoic aquifers of southeast Kansas and adjacent areas, 8:24297 (J:US)
RADIUM 228
Radioecological Concentration
Distribution and possible causes of radionuclides in groundwaters of Missouri, 8:24296 (J:US)

RADIUM D
See LEAD 210
RADIUM F
See POLONIUM 210
RADON
Adsorption
Effects of moisture on radon emanation including the effects on diffusion. Open file report oct 79-Nov 81, 8:23097 (R:US)
Diffusion
Effects of moisture on radon emanation including the effects on diffusion. Open file report oct 79-Nov 81, 8:23097 (R:US)
RADON 226
Inhalation
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)
Uptake
Some aspects of radon and its daughter-products in man and his environment, 8:24362 (R:US)
RAFT RIVER VALLEY
Seismic Surveys
Seismic baseline and induction studies: Roosevelt Hot Springs, Utah and Raft River, Idaho, 8:23370 (R:US)
RAINOUT
See WASHOUT
RANDOMNESS
RANDOM NUMBERS; obtained from U235 alpha decay (IBM370,303x; Binary (random numbers) and FORTRAN IV (AFRAND and Driver)), 8:25256 (R:US)
RANKINE CYCLE POWER SYSTEMS
Computerized Simulation
STESEP; solar total energy system evaluation (CDC6600,7600;IBM370; FORTRAN IV), 8:23297 (R:US)
Economics
Predicting the performance and cost of ORC waste-heat-recovery systems, 8:24157 (R:US)
Evaluation
STESEP; solar total energy system evaluation (CDC6600,7600;IBM370; FORTRAN IV), 8:23297 (R:US)
Performance
Predicting the performance and cost of ORC waste-heat-recovery systems, 8:24157 (R:US)
Working Fluids
Predicting the performance and cost of ORC waste-heat-recovery systems, 8:24157 (R:US)
RARE EARTH COMPOUNDS
See also CERIUM COMPOUNDS
Band Theory
Band model for d- and f-metals, 8:23946 (R:US)
Electronic Structure
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)
Energy Levels
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)
Excited States
Spectroscopic properties of the f-elements in compounds and solutions (79 references), 8:24078 (R:US)
Fermi Level
Band model for d- and f-metals, 8:23946 (R:US)
RARE EARTH NUCLEI
For nuclear properties of rare earths.

TRANSIENT OVERPOWER ACCIDENTS
Computer Codes
CACECO; LMFBR containment accident analysis (CDC CYBER74;CDC7600; CDC FORTRAN Extended with only a few statements that do not comply with the American National Standards Institute (ANSI) FORTRAN.), 8:23511 (R:US)
PROSA2; probabilistic response surface studies (IBM370; FORTRAN IV (95%) and Assembly language (5%)), 8:23580 (R:US)
Computerized Simulation
NALAP; LMFBR transient response to accident (CDC7600,CYBER76; FORTRAN IV (99%) and COMPASS (1%)), 8:23581 (R:US)
Containment
A model for predicting containment response to hydrogen burns, 8:23654 (J:US)
Environmental Impacts
CRAC calculations for accident sections of environmental statements, 8:23633 (R:US)

Fission Product Release
Aerosol Behavior Code Validation and Evaluation (ABCOVE) Program: preliminary results of Test AB5 (LMFBR), 8:23617 (R:US)
Heat Transfer
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
RELAP5 assessment: FLECHT SEASET steam-generator test 23402 (PWR), 8:23632 (R:US)
Hydraulics
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
RELAP5 assessment: FLECHT SEASET steam-generator test 23402 (PWR), 8:23632 (R:US)
Mathematical Models
A model for predicting containment response to hydrogen burns, 8:23654 (J:US)
Radioactive Aerosols
Aerosol Behavior Code Validation and Evaluation (ABCOVE) Program: preliminary results of Test AB5 (LMFBR), 8:23617 (R:US)
MAEROS user manual (LMFBR), 8:23627 (R:US)
Radioactivity Transport
HAARM3; aerosol behavior log-normal dist model (CDC6400,7600,CYBER73; FORTRAN IV, FTN4.5 (CDC7600)), 8:23582 (R:US)
Risk Assessment
CRAC calculations for accident sections of environmental statements, 8:23633 (R:US)

REACTOR CHANNELS
Passage through the reactor.
Filters
Removable, hermetically-sealing, filter attachment system for hostile environments, 8:23552 (P:US)

REACTOR CHARGING MACHINES
Mathematical Models
Two-phase jet load models, 8:23656 (J:US)

REACTOR COMPONENTS
See also BREEDING BLANKETS
CORE CATCHERS
FUEL ELEMENTS
REACTOR CHANNELS
REACTOR CHARGING MACHINES
REACTOR COOLING SYSTEMS
REACTOR CORES
Research Programs
Reactor-safety research programs. Quarterly report, July-September 1982, 8:23549 (R:US)
Supports
Fracture toughness of PWR-components supports, 8:23505 (R:US)

REACTOR CONTROL SYSTEMS
Consoles
Using cognitive modeling to improve the man-machine interface (PWR), 8:23561 (RA:US)
Visual momentum: an example of cognitive models applied to interface design, 8:23560 (RA:US)
Failures
Common-cause fault rates for instrumentation and control assemblies, 8:23631 (R:US)
Human Factors Engineering
Cognitive models and computer aids for nuclear plant control room operators, 8:23559 (RA:US)
Cognitive models embedded in system simulation models, 8:23565 (RA:US)
Framework for modeling supervisory control behavior of operators of nuclear power plants, 8:23558 (RA:US)
Human cognition, 8:23562 (RA:US)
Outline of a model of human problem solving in failure situations, 8:23564 (RA:US)
Role of cognitive models of operators in the design, operation and licensing of nuclear power plants, 8:23557 (RA:US)
Role of conceptual models in nuclear power plant operation, 8:23563 (RA:US)
Rule-based approach to cognitive modeling of real-time decision making, 8:23566 (RA:US)
Workshop on cognitive modeling of nuclear-plant control-room operators, 8:23556 (R:US)

REACTOR CONTROL THEORY
See REACTOR KINETICS

REACTOR COOLING SYSTEMS
Level Indicators
Liquid level sensing device, 8:23506 (P:US)
Molten Metal-Water Reactions
PTA1; pipe system pressure analysis (IBM370/195; FORTRAN IV), 8:23510 (R:US)
Pressure Gradients
PTA1; pipe system pressure analysis (IBM370/195; FORTRAN IV), 8:23510 (R:US)
Transients
Simulation of thermal-transient-induced-pipe-flow stratification using COMMIX-2, 8:23542 (R:US)

REACTOR CORE DISRUPTION
After-Heat Removal
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Containment Systems
ALICE-11: an arbitary lagrangian-eulerian code for containment analysis with complex internals, 8:23642 (J:US)
Dispersion Nuclear Fuels
Role of fuel power in HCDA early fuel dispersal, 8:23650 (J:US)
Dryout
Application of debris-bed dryout data to CONACS-1 modeling, 8:23599 (R:US)
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)
Fluid-Structure Interactions
Fluid-cushioned impact between reactor fuel assemblies for seismic disturbances, 8:23643 (J:US)
Fuel-Cladding Interactions
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
The effects of flowing fuel particulate on bulk freezing predictions, 8:23647 (J:US)
Heat Transfer
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Interaction and penetration of heated UO_2 with limestone concrete (LMFBR), 8:23597 (R:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)
Hydraulics
Effect of particle stratification on debris-bed dryout (LMFBR), 8:23598 (R:US)
Experiments and procedures for bottom-heating heat-transfer experiments through UO_2 debris beds in sodium (LMFBR), 8:23596 (R:US)
Thermal hydraulic aspects in the analysis of LMFBR disrupted-core situations, 8:23605 (R:US)
Liquid Flow
Experimental investigation of the unsteady one-phase flow through perforated plates, 8:23620 (R:DE:In German)
Mathematical Models
An assessment of SIMMER-11 freezing, melting, and plugging calculations, 8:23646 (J:US)
Risk Assessment
Selection of low-risk design guidelines for energetic events, 8:23591 (R:US)
S Codes
Status and validation of the SAS4A accident-analysis code system, 8:23592 (R:US)
Thermal Stresses
Interaction and penetration of heated UO_2 with limestone concrete (LMFBR), 8:23597 (R:US)
Transients
An improved quasistatic method for transition-phase calculations, 8:23657 (J:US)

REACTOR CORE RESTRAINTS
Strains
NUBOW-2D Inelastic; bowed reactor core analysis (IBM370; FORTRAN IV), 8:23514 (R:US)
Three-Dimensional Calculations
Core restraint analysis of a free-flowering large heterogeneous LMFBR, 8:23644 (J:US)
REACTOR CORES
Accidents
In-plant considerations for optimal offsite response to reactor accidents, 8:23574 (R:US)
Criticality
Nuclear criticality safety experiments, calculations, and analyses: 1958 to 1982. Volume 1. Lookup tables, 8:23544 (R:US)
Nuclear criticality safety experiments, calculations, and analyses - 1958 to 1982. Volume 2. Summaries. Compilation of papers from the Transactions of the American Nuclear Society, 8:23545 (R:US)
REACTOR DECOMMISSIONING
Financing
Funding nuclear-power-plant decommissioning. Final report, 8:23536 (R:US)
REACTOR FUEL ELEMENTS
See FUEL ELEMENTS
REACTOR FUELS
See NUCLEAR FUELS
REACTOR INSTRUMENTATION
Failures
Common-cause fault rates for instrumentation and control assemblies, 8:23631 (R:US)
Level Indicators
Development of an improved-contact liquid-level probe for pressurized reactor vessels, 8:23495 (R:US)
REACTOR KINETICS
Research Programs
Reactor-safety research programs. Quarterly report, July-September 1982, 8:23549 (R:US)
REACTOR LATTICES
Dancoff Correction
Incorporation of clad effects into Sauer's method for computing Dancoff factors, 8:23548 (J:GB)
REACTOR LICENSING
BWR high burnup licensing assessment, 8:23461 (RA:US)
PWR high burnup licensing assessment, 8:23490 (RA:US)
Regulatory licensing status summary report. Nuclear power plants data for decisions (blue book), February 1-February 28, 1983, 8:23526 (R:US)
Regulatory and technical reports, 8:23524 (R:US)
Computer Calculations
BONAMI-S: response self-shielding by the Bondarenko method. Volume 2. Functional studies (BONAMI-S code), 8:23543 (R:US)
REACTOR MATERIALS
To be assigned in conjunction with the specific descriptor for the material used in a reactor, provided this descriptor is not yet up-posted to reactor materials.

Self-help energy conservation programs for low-income groups: the SMILE experience, 8:23826 (R:US)
RESIDENTIAL SECTOR
Rate guide for residential No. 2 heating oil and coal for SOLCOST Data Bank cities, 8:23001 (R:US)
Energy Consumption
Monthly Energy Review, 8:23755 (R:US)
Residential energy consumption survey. Consumption patterns of household vehicles, supplement: January 1981-September 1981, 8:23756 (R:US)
Energy Demand
Residential demand for energy: a time-series and cross-sectional analysis for eight OECD countries, 8:23818 (R:US)
Power Demand
Case for electricity: an applications approach, 8:23728 (R:US)
Typical electric bills. January 1, 1982, 8:23730 (R:US)
Waste Heat Utilization
Fundamental study on the feasibility of waste heat utilization in households, 8:23848 (R:DE:In German)
RESIDUES
See also ASHES
Chemical Composition
Advanced characterization of combustion and conversion feedstocks, 8:22995 (R:US)
Supercritical Gas Extraction
Supercritical gas extraction to separate liquefied coal from residual solids, 8:22927 (R:US)
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESINS
Chemical Properties
Qualities and processes of diallyl phthalate resin: translated from the Japanese, 8:24025 (TJ:US)
Comparative Evaluations
Behavior of tetravalent plutonium with various ion exchangers in solutions containing nitric acid and oxalates (Dowex 50W-X8, Dowex 1-X8 and Dowex chelating resin Al-X8), 8:24053 (TG:US)
Manufacturing
Qualities and processes of diallyl phthalate resin: translated from the Japanese, 8:24025 (TJ:US)
Physical Properties
Qualities and processes of diallyl phthalate resin: translated from the Japanese, 8:24025 (TJ:US)
Uses
Qualities and processes of diallyl phthalate resin: translated from the Japanese, 8:24025 (TJ:US)
RESOURCE RECOVERY FACILITIES
Guidebook for evaluation of resource recovery systems in municipalities, 8:23878 (R:US)
Landfill gas recovery in the USA, 8:23873 (R:US)
Financing
Resource-recovery option in solid-waste management: a review guide for public officials, 8:23875 (R:US)
Marketing
Resource-recovery option in solid-waste management: a review guide for public officials, 8:23875 (R:US)
Operation
Review and evaluation of a bioconversion-process demonstration plant and its related technologies, 8:23874 (R:US)
RESPIRABLE DUSTS
See DUSTS
RETICULAR CELLS
See RETICULOENDOTHELIAL SYSTEM
RETICULOENDOTHELIAL SYSTEM
Immunosuppression
Chemical effects on the immune system, 8:24448 (RA:US)
REVERSE-FIELD PINCH
Current-Drive Heating
Possible steady state current drive for reversed field pinch discharges, 8:24811 (J:US)
Design
Design principles for a large RFP experiment, 8:24947 (J:US)
Engineering
Engineering needs of a TRACT fusion reactor program, 8:24952 (J:US)
TPE-1R (M) reversed field pinch experiment, 8:24948 (J:US)
Liners
Surface interactions in a reverse field pinch, 8:24887 (J:NL)
Operation
Theoretical and experimental evaluation of the parameters in the new configuration of ETA-BETA II, 8:25218 (J:US)
Stress Analysis
Comparison of numerical solutions of the shell stress analysis for a large RFP experiment, 8:24949 (J:US)
RHENIUM COMPLEXES
Catalytic Effects
Synthetic and catalytic studies directed toward homogeneously catalyzed selective oxidation. Final report, 8:24059 (R:US)
RHO-765 RESONANCES
Coherent Production
Radiative decay width of the rho$^-$ meson, 8:24623 (J:US)
Radiative Decay
Radiative decay width of the rho$^-$ meson, 8:24623 (J:US)

RHODIUM
Agglomeration
Structure of bimetallic clusters. Extended x-ray absorption fine structure (EXAFS) studies of Ir—Rh clusters, 8:23972 (J:US)
Inventories
Byproduct inventories, 8:23171 (R:US)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)
RHODIUM BORIDES
Ferromagnetism
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R:US)
Magnetic Specific Heat
Magnetic correlations in $ErRh_4B_4$, 8:24015 (BA:US)
Phase Transformations
Observation of a first-order phase transition in single-crystal $ErRh_4B_4$ at H/sub c2/, 8:24002 (R:US)
Spin-Lattice Relaxation
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4 (RE = Gd, Er), 8:23999 (R:US)
Superconductivity
Observation of a first-order phase transition in single-crystal $ErRh_4B_4$ at H/sub c2/, 8:24002 (R:US)
Study of coexistence of ferromagnetism and superconductivity in single-crystal $ErRh_4B_4$, 8:23996 (R:US)
RHODIUM COMPLEXES
Catalytic Effects
Synthetic and catalytic studies directed toward homogeneously catalyzed selective oxidation. Final report, 8:24059 (R:US)
RHYOLITES
Chemical Composition
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
Petrology
Chemical and textural surface features of pyroclasts from hydrovolcanic eruption sequences, 8:24491 (R:US)
Textural analysis of tephra from a rhyodacitic eruption sequence, Thira (Santorini), Greece, 8:24490 (R:US)
RICHLAND FFTF REACTOR
See FFTF REACTOR
RIEMANN FUNCTION
Numerical Solution
FASTCAR; solution of Cauchy-Riemann equations (CDC6600,7600;IBM360,370; FORTRAN IV), 8:25251 (R:US)
RIGHTS-OF-WAY
Plants
Transmisson-Facilities Vegetation-Management Program: Bonneville Power Administration. Draft environmental impact statement, 8:24309 (R:US)
RINGS (STORAGE)
See STORAGE RINGS
RISER CRACKING
See COAL LIQUEFACTION
RISK ASSESSMENT
Mathematical Models
Dose response modeling for chemical mutagens, 8:24438 (RA:US)
ROADS
Building Materials
Energy involved in construction materials and procedures, 8:23844 (R:US)
Energy Consumption
Energy involved in construction materials and procedures, 8:23844 (R:US)
ROADWAYS (MINES)
See MINE ROADWAYS
ROBERT E. GINNA-1 REACTOR
See GINNA-1 REACTOR
ROBINSON-2 REACTOR
Fuel Rods
High burnup performance of Exxon Nuclear Company fuel in the H. B. Robinson pressurized water reactor, 8:23477 (RA:US)
ROCK BURSTS
Stress Relaxation
Pilot working for the prevention of rock bumps in seam Wilhelm/Johann in Colliery Sachsen, 8:22968 (R:DE:In German)
ROCKS
See also SYNTHETIC ROCKS
Chemical Composition
Composition of rocks - criteria for the conditioning of high-level radioactive wastes, 8:23140 (RA:DE:In German)
Crack Propagation
Time depdendent crack growth and failure in brittle rock, 8:24500 (R:US)
Phase Transformations
Depositional environments, subsurface stratigraphy, and post-burn characterization of the Paleocene-Eocene Hanna Formation at the Hanna, Wyoming underground coal-gasification site: Hanna II Phase 1 experiment (Hanna II; post mortem examination), 8:22923 (R:US)
ROCKWELL FLASH HYDROLIEUEFACTION PROCESS
See CS-R PROCESS
ROCKY FLATS PLANT
Planning
Long-range Rocky Flats utilization study, 8:24219 (R:US)
Socio-Economic Factors
Long-range Rocky Flats utilization study, 8:24219 (R:US)
Uses
Long-range Rocky Flats utilization study, 8:24219 (R:US)
RODS (FUEL)
See FUEL RODS
ROOFS
Stability
Method of investigations, estimation and classification of roofs in mines in the United States of America for the selection of suitable mechanized support for longwalls. Report No. 2. State-of-the-art report on roof rock stability tests and powered support selection systems for longwalls, 8:22978 (R:US)
ROOM AND PILLAR MINING
Haulage Equipment
Continuous haulage update, 8:22972 (R:US)
Mine Haulage
Continuous haulage update, 8:22972 (R:US)
Productivity
Continuous haulage update, 8:22972 (R:US)
ROOSEVELT HOT SPRINGS
Seismic Surveys
Seismic baseline and induction studies: Roosevelt Hot Springs, Utah and Raft River, Idaho, 8:23370 (R:US)
ROUS SARCOMA VIRUS
See ONCOGENIC VIRUSES
RUBBERS
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
RUBIDIUM
Ion-Atom Collisions
Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)
RUSSELLVILLE-2 ARKANSAS REACTOR
See ARKANSAS-2 REACTOR
RUTHENIUM
Chemistry
Behavior of ruthenium during reprocessing of spent reactor fuel, 8:23113 (TG:US)
Inventories
Byproduct inventories, 8:23171 (R:US)
Solvent Extraction
Behavior of ruthenium during reprocessing of spent reactor fuel, 8:23113 (TG:US)
Spent Fuels
Behavior of ruthenium during reprocessing of spent reactor fuel, 8:23113 (TG:US)

S

SAFEGUARDS
Safeguards Summary Event List (SSEL), 8:23195 (R:US)
SAFETY
For general aspects of safety and protection of personnel.
See also REACTOR SAFETY
Standards
The Federal Coal Mine Health program in 1976. Annual report No. 7, 8:23010 (R:US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SALINE ZONE
See OIL SHALES
PICEANCE CREEK BASIN
SALMONELLA TYPHIMURIUM
Biological Radiation Effects
Respiration shutoff in Escherichia coli and Salmonella typhimurium after far-uv irradiation, 8:24375 (RA:US)
SAMARIUM 142
Quadrupole Moments
Quadrupole moment of the 7^- isomer in ^{143}Sm, 8:24677 (RA:DE:In German)
SAMARIUM 152 TARGET
Oxygen 16 Reactions
Calculation of reaction cross sections for deformed nuclei, 8:24683 (RA:DE:In German, English)
SAMARIUM 154 TARGET
Krypton 86 Reactions
Bombarding energy dependence of angular momentum transfer in deep inelastic collisions, 8:24690 (J:NL)
SANDSTONES
Acoustic Measurements
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Electrical Properties
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Mineralogy
Mineralogy and petrology aspects of Mesaverde Formation at Rifle Gap, Colorado, specific to the sedimentology and gas-bearing intervals in the subsurface, 8:23060 (R:US)
Permeability
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Petrology
Mineralogy and petrology aspects of Mesaverde Formation at Rifle Gap, Colorado, specific to the sedimentology and gas-bearing intervals in the subsurface, 8:23060 (R:US)
Porosity
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Scanning Electron Microscopy
Useful technique to study particle invasion in porous media by backscattered electron imaging, 8:23015 (J:US)
Ultrasonic Testing
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
Water Saturation
Sonic and electrical properties of partially saturated tight-gas sands. Final report, 8:23050 (R:US)
SANITARY LANDFILLS
Anaerobic Digestion
Landfill gas recovery in the USA, 8:23873 (R:US)
Coverings
Computer optimization of landfill-cover design, 8:23871 (R:US)
SAVANNAH RIVER PLANT
Radioactive Waste Processing
Waste sludge composition at the Savannah River Plant, 8:23180 (J:US)
SCANDIUM IONS
Electron-Ion Collisions
Distorted-wave electron-impact ionization cross sections for the argon isoelectronic sequence, 8:24554 (J:US)
SCANDIUM PHOSPHATES
Crystal Structure
Structure and conductivity of the NASICON analog $Na_3SC_2(PO_4)_3$, 8:24058 (R:US)
SCANNING ELECTRON MICROSCOPY
Imaging and analysis of surfaces using diffracted electrons, 8:24068 (BA:US)
SCATTERING
See also INELASTIC SCATTERING
LIGHT SCATTERING
SMALL ANGLE SCATTERING
Quantum Mechanics
Scattering theory in arrangement channel quantum mechanics, 8:24638 (J:US)
SCAVENGING (ATMOSPHERIC)
See WASHOUT
SCHOOL BUILDINGS
Energy Consumption
Energy conservation in Maryland public schools. Analysis of 1982 data in relation to the 1978-81 study, 8:23809 (R:US)
Energy conservation in Maryland public schools, 1978-1981, 8:23811 (R:US)
Photovoltaic Power Supplies
Experience with a grid-interactive solar photovoltaic electric system, 8:23296 (J:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 14. For Beverly High School, Beverly, Massachusetts for October 1982, 8:23293 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 16. For Beverly High School, Beverly, MA for December 1982, 8:23295 (R:US)
Intermediate photovoltaic system application experiment operational performance report. Volume 15. For Beverly High School, Beverly, MA for November 1982, 8:23294 (R:US)
Solar Air Conditioning
Solar-energy-system performance evaluation: Irvine School (El Camino Real Elementary School) Irvine, California, October 1978-March 1979, 8:23344 (R:US)
Solar Space Heating
Corona del Sol High School solar system, Tempe Union High School District No. 213. Final technical report, 8:23320 (R:US)
Solar-energy-system performance evaluation: Northview Elementary School (Howard's Grove) Howard's Grove, Wisconsin, September 1978-April 1979, 8:23346 (R:US)
Solar-energy-system performance evaluation: Page Jackson Elementary School, Charles Town, West Virginia, November 1978-March 1979, 8:23345 (R:US)
Solar-energy-system performance evaluation: Scattergood School Recreation Center, West Branch, Iowa, June 1978-April 1979, 8:23339 (R:US)
Solar-energy-system performance evaluation: Irvine School (El Camino Real Elementary School) Irvine, California, October 1978-March 1979, 8:23344 (R:US)
Solar-project cost report for Howard's Grove School, Howard's Grove, Wisconsin, 8:23347 (R:US)
Solar Water Heating
Corona del Sol High School solar system, Tempe Union High School District No. 213. Final technical report, 8:23320 (R:US)
Solar-energy-system performance evaluation: Scattergood School Recreation Center, West Branch, Iowa, June 1978-April 1979, 8:23339 (R:US)
SCHOTTKY BARRIER SOLAR CELLS
Diffusion
Structural and electronic studies of defects in amorphous silicon. Report No. 3. Technical progress report, November 1981-January 1982, 8:23280 (R:US)
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
See also LIQUID SCINTILLATION DETECTORS

Design
Facility for positron computed tomography, 8:24347 (P:DE:In German)
Research Programs
In vivo measurements of bone-seeking radionuclides. Progress report, 1981-1982 (Lead abstract), 8:24197 (R:US)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCRAM
Cooling Ponds
Analysis of a partial scram event in a typical BWR/4, 8:23653 (J:US)
Reactor Cooling Systems
Analysis of a partial scram event in a typical BWR/4, 8:23653 (J:US)
SCREW PINCH
Engineering
Engineering tests and performance of screw pinch device TPE-2, with non-circular cross-section, 8:24946 (J:US)
Performance
Engineering tests and performance of screw pinch device TPE-2, with non-circular cross-section, 8:24946 (J:US)
SEA LEVEL
Variations
Possible changes in global sea level and their potential causes, 8:24269 (R:US)
SEABROOK-1 REACTOR
Legal Aspects
Safety evaluation report: related to the operation of Seabrook Station, Units 1 and 2, Docket Nos. 50-443 and 50-444, Public Service Company of New Hampshire, et al., 8:23623 (R:US)
Reactor Safety
Safety evaluation report: related to the operation of Seabrook Station, Units 1 and 2, Docket Nos. 50-443 and 50-444, Public Service Company of New Hampshire, et al., 8:23623 (R:US)
SEABROOK-2 REACTOR
Legal Aspects
Safety evaluation report: related to the operation of Seabrook Station, Units 1 and 2, Docket Nos. 50-443 and 50-444, Public Service Company of New Hampshire, et al., 8:23623 (R:US)
Reactor Safety
Safety evaluation report: related to the operation of Seabrook Station, Units 1 and 2, Docket Nos. 50-443 and 50-444, Public Service Company of New Hampshire, et al., 8:23623 (R:US)
SEALING MATERIALS
Fluid Flow
Sealing arrangement with annular flexible disc, 8:23520 (P:US)
Liquid Metal Cooled Reactors
Sealing arrangement with annular flexible disc, 8:23520 (P:US)
SEALS
Leak Testing
Grayloc seal static tests, 8:24112 (R:US)
Performance Testing
Grayloc seal static tests, 8:24112 (R:US)
SEAWATER
AMP
Dissolved cyclic adenosine monophosphate (cAMP) in the sea and uptake of cAMP by marine bacteria, 8:24351 (J:DE)
Chemical Analysis
Fate of chlorine in seawater. Final report, August 1, 1977-January 31, 1981, 8:24268 (R:US)
Corrosive Effects
Assessment of corrosion fatigue behavior of offshore structures, 8:23904 (RA:US)
Fatigue of welded structural steel in sea water, 8:23905 (RA:US)
Sea water corrosion of two-phase Cu-10Ni-8Sn, 8:23897 (RA:US)
SEBACEOUS GLANDS
See SKIN
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SECONDARY EMISSION
Computer Codes
CONDYN; Polya model secondary electron spectra (CDC6600,7600; FORTRAN IV), 8:24510 (R:US)
SECONDARY RECOVERY
See ENHANCED RECOVERY
SECURITY VIOLATIONS
Public access to classified reports at the Los Alamos Scientific Laboratory, 8:25282 (R:US)
SEDIMENTS
Biogeochemistry
Temporal trends in the pH of Woods, Sagamore, and Panther Lakes as determined by an analysis of diatom population, 8:24287 (RA:US)
Environmental Transport
Long-term simulation of sediment and contaminant transport, 8:24291 (R:US)
Geochemical Surveys
Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R:US)
Mineralogy
Summary of observations from the investigation of the sediments of Panther, Sagamore and Woods, 8:24286 (RA:US)
PH Value
Summary of observations from the investigation of the sediments of Panther, Sagamore and Woods, 8:24286 (RA:US)
SEISMIC DETECTION
Data Analysis
Analysis of seismic data at RSTN sites and high-frequency seismic signals at TFSO, 8:24494 (R:US)
SEISMIC DETECTORS
Performance
Analysis of seismic data at RSTN sites and high-frequency seismic signals at TFSO, 8:24494 (R:US)
SEISMIC SURVEYS
Seismic S Waves
Registration of shear waves, 8:24486 (R:DE:In German)
Telemetry
Development of a telemetry system for seismic application, 8:23012 (R:DE:In German)
SEISMIC WAVES
Wave Propagation
Investigations of near-source structural effects on body waves. Part II. Yucca Flats; receiver functions appropriate to NTS; motive functional specifications. Annual technical report, 8:24221 (R:US)
SELENIUM
Ion-Atom Collisions
Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
SELENIUM IONS
Emission Spectra
Spectra of germanium and selenium in the 50-350 A region from the PLT tokamak plasma, 8:24770 (R:US)
SELF-POTENTIAL SURVEYS
Two-Dimensional Calculations
SPXCPL; two-dimensional modeling of self-potential effects (PRIME400;DEC VAX11/780; FORTRAN IV), 8:23366 (R:US)

SELF-POWERED NEUTRON DETECTORS
Efficiency
Improved program for the determination of neutron efficiency of large Self Powered Neutron Detectors taking into account charge carrier production in the insulator, 8:24204 (R:DE:In German)
SELF-SERVE STATIONS
See GASOLINE SERVICE STATIONS
SEM (MICROSCOPY)
See SCANNING ELECTRON MICROSCOPY
SEMICONDUCTOR COUNTERS
See SEMICONDUCTOR DETECTORS
SEMICONDUCTOR DETECTORS
Charge-Coupled Devices
Detection of minimum ionizing particles with a charge coupled device, 8:24206 (J:NL)
SENIOR CENTERS
See PUBLIC BUILDINGS
SENSIBLE HEAT STORAGE
Optimization
Optimization of heat storage systems using silica gels. Final report, 8:23665 (R:US)
SEPTUM MAGNETS
Magnetic Shielding
Shielded beam channel septum magnet, 8:24193 (J:US)
SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SERUM (IMMUNE)
See IMMUNE SERUMS
SERVICE STATIONS
See GASOLINE SERVICE STATIONS
SHAFT EXCAVATIONS
Comparative Evaluations
Evaluation of alternative shaft-sinking techniques for high-level nuclear waste (HLW) deep geologic repositories. Final report (Task 3), June 1981-July 1982, 8:23150 (R:US)
SHALE MINING
See OIL SHALE MINING
SHALE OIL
Chemical Analysis
Occurrence of biomarkers in Green River shale oil (Isoprenoids and polycycloalkanes), 8:23086 (R:US)
Chemical Composition
Comparative study of the combustion of alternate liquid fuels, 8:22994 (R:US)
Combustion Properties
Comparative study of the combustion of alternate liquid fuels, 8:22994 (R:US)
Skin Absorption
Dermal Pathology Program, 8:24446 (RA:US)
Toxicity
Dermal Pathology Program, 8:24446 (RA:US)
SHAPED CHARGES
Prior to August 1979 CHEMICAL EXPLOSIVES and SHAPE were used.
Detonations
Shaped-charge penetration in concrete: a unified approach, 8:24218 (R:US)
SHEATHS (FUEL)
See FUEL CANS
SHELLS
Structural forms; for electron shells in atoms use ELECTRONIC STRUCTURE.
Dynamics
Simple ablative implosion model: shell dynamics, 8:24849 (J:US)
Implosions
Simple ablative implosion model: shell dynamics, 8:24849 (J:US)
Stress Analysis
CURT2; curved tubes or elbows & attached pipes (IBM360,370; FORTRAN IV), 8:24084 (R:US)
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDING
Design
Doublet III vessel wall protection for 7 MW neutral beam heated plasma operation, 8:24968 (J:US)
Neutron Transport
DEMONR; unbiased Monte Carlo slab shield code (IBM360/65; FORTRAN IV), 8:24716 (R:US)
Point Kernels
PELSHIE2; point kernel integration shielding (IBM360,303x; FORTRAN IV (99%) and BAL (1%)), 8:24720 (R:US)
SHIELDING MATERIALS
Neutron Transport
SPAR1; shielding with analytic ray-tracing (CDC6600,7600; FORTRAN IV), 8:24719 (R:US)
Photon Transport
SPAR1; shielding with analytic ray-tracing (CDC6600,7600; FORTRAN IV), 8:24719 (R:US)
SHIELDS
See also THERMAL SHIELDS
Design
Elmo Bumpy Torus-reactor first wall/blanket shield (FWBS) design, 8:24972 (J:US)
Electromagnetic Radiation
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
Test Facilities
FELIX: an experimental facility to study electromagnetic effects for first wall, blanket, and shield systems, 8:24970 (J:US)
The FELIX experimental program and future upgrades, 8:24971 (J:US)
SHIPPINGPORT PRESSURIZED WATER REACTOR
See SHIPPINGPORT REACTOR
SHIPPINGPORT REACTOR
Reactor Operation
Shippingport Atomic Power Station. Quarterly operating report, fourth quarter 1982, 8:23470 (R:US)
SHIPS
Boiler Fuels
A study of the total cost of conventional ship propulsion fuel. Final report FY 1980, 8:23030 (R:US)
SHORT ROTATION CULTIVATION
Mathematical Models
Analysis of short-rotation forests using the Argonne model for selecting economic strategy (MOSES), 8:23256 (R:US)
SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Noise
Radioactively induced noise in gas-sampling uranium calorimeters, 8:24195 (R:US)
SHUTDOWN (REACTOR)
See REACTOR SHUTDOWN
SI UNITS
Conversion
DWG100RQ;DWG101RQ; convert to or from SI units (IBM360,370,303x; FORTRAN IV (85%) and COBOL Version 4 (15%)), 8:25245 (R:US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SILICA
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Chemical Reactions
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982, 8:24003 (R:US)
Corrosion
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982, 8:24003 (R:US)

SILICA GEL
Sensible Heat Storage
Optimization of heat storage systems using silica gels. Final report, 8:23665 (R:US)
SILICON
Amorphous State
Preparation of in situ doped hydrogenated amorphous silicon by homogeneous chemical vapor deposition, 8:24036 (J:US)
Crystal Doping
Low-Cost Solar-Array Project: cell and module formation research area. Process research of non-CZ silicon material. Quarterly report No. 4, December 1, 1982-February 28, 1983, 8:23269 (R:US)
Crystal Growth
Large-area sheet task: advanced dendritic-web-growth development. Annual report, October 23, 1981-October 22, 1982 (RIBBON), 8:23267 (R:US)
Cutting
LSA large area silicon sheet task enhanced I.D. slicing. Quarterly report No. 7, July-September 1980, 8:23266 (R:US)
Electron Channeling
Electron-channeling radiation: x-ray source feasibility study, 8:24729 (R:US)
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
Electronic Structure
Self-consistent electronic structure of realistic models of amorphous hydrogenated silicon, 8:24039 (J:US)
Hydrogenation
Effects of ion beam hydrogenation on silicon solar cell structures, 8:23284 (J:CH)
Preparation of in situ doped hydrogenated amorphous silicon by homogeneous chemical vapor deposition, 8:24036 (J:US)
Self-consistent electronic structure of realistic models of amorphous hydrogenated silicon, 8:24039 (J:US)
Ion Implantation
Megavolt arsenic implantation into silicon, 8:24042 (J:CH)
Irradiation
Time-resolved optical studies of silicon during nanosecond pulsed-laser irradiation, 8:24038 (J:US)
Microstructure
Small angle neutron scattering study of structural heterogeneities in -Si:H, 8:23261 (R:FR)
Optical Properties
Time-resolved optical studies of silicon during nanosecond pulsed-laser irradiation, 8:24038 (J:US)
Paramagnetism
Electron spin resonance study of radiation-induced electrically active paramagnetic centers at the Si/SiO_2 interface, 8:24035 (J:US)
Phonons
Effect of geometric deformation of tetrahedral bonding on the vibrational properties of Group-IV semiconductors: Si in the BC-8 structure, 8:24037 (J:US)
Photoluminescence
Time-resolved optical studies of silicon during nanosecond pulsed-laser irradiation, 8:24038 (J:US)
Positron Channeling
Investigation of radiation from channeled electrons and positrons. Final report, September 1, 1978-August 31, 1981, 8:24723 (R:US)
Small Angle Scattering
Small angle neutron scattering study of structural heterogeneities in -Si:H, 8:23261 (R:FR)
Spectra
Effect of geometric deformation of tetrahedral bonding on the vibrational properties of Group-IV semiconductors: Si in the BC-8 structure, 8:24037 (J:US)
SILICON CARBIDES
Corrosion
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982, 8:24003 (R:US)
Pressing
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Sintering
Fossil-Energy-Program. Quarterly progress report for period ending December 31, 1982, 8:22898 (R:US)
Thermal Conductivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Thermal Diffusivity
Effect of microcracking on the conduction of heat in brittle composites, 8:24016 (RA:US)
Whiskers
Production and characterization of beta-silicon carbide and alpha-silicon nitride whiskers for ceramic matrix composites, 8:24005 (R:US)
SILICON IONS
Energy-Level Transitions
Beam-foil spectroscopy at Argonne National Laboratory, 8:24517 (R:US)
Ion Spectroscopy
Beam-foil spectroscopy at Argonne National Laboratory, 8:24517 (R:US)
Ion-Atom Collisions
L-shell excitation of Si and Ar in collisions of 35 to 400 keV Si^+ on Ar, 8:24540 (RA:DE:In German)
Target thickness and density effects for inner shell excitation in near symmetric collision-systems, 8:24544 (RA:DE:In German)
SILICON NITRIDES
Chemical Vapor Deposition
Hydrogen-implanted silicon nitride, 8:24011 (J:US)
Corrosion
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982, 8:24003 (R:US)
Creep
High temperature properties of Si_3N_4, 8:23994 (R:DE:In German)
Theoretical estimate of solution-precipitation creep in MgO-fluxed Si/sub 3/N/sub 4/, 8:24012 (J:US)
Fabrication
Oxidation stability of advanced reaction-bonded Si/sub 3/N/sub 4/ materials, 8:24014 (J:US)
Hot Pressing
Theoretical estimate of solution-precipitation creep in MgO-fluxed Si/sub 3/N/sub 4/, 8:24012 (J:US)
Ion Implantation
Hydrogen-implanted silicon nitride, 8:24011 (J:US)
Oxidation
Oxidation stability of advanced reaction-bonded Si/sub 3/N/sub 4/ materials, 8:24014 (J:US)
Whiskers
Production and characterization of beta-silicon carbide and alpha-silicon nitride whiskers for ceramic matrix composites, 8:24005 (R:US)
SILICON OXIDES
See also QUARTZ
SILICA
Paramagnetism
Electron spin resonance study of radiation-induced electrically active paramagnetic centers at the Si/SiO_2 interface, 8:24035 (J:US)
SILICON SOLAR CELLS
Diffusion
Effect of lithium diffusion into polycrystalline Si solar cells, 8:23288 (J:US)
Energy Levels
Effect of lithium diffusion into polycrystalline Si solar cells, 8:23288 (J:US)
Fabrication
Structural and electronic studies of defects in amorphous silicon. Report No. 3. Technical progress report, November 1981-January 1982, 8:23280 (R:US)
Performance
Structural and electronic studies of defects in amorphous silicon. Report No. 3. Technical progress report, November 1981-January 1982, 8:23280 (R:US)

Physical Radiation Effects
Effects of ion beam hydrogenation on silicon solar cell structures, 8:23284 (J:CH)
Production
Module experimental process system development unit (MEPSDU). Summary technical report, November 26, 1980-February 23, 1982, 8:23268 (R:US)
Recombination
Effect of lithium diffusion into polycrystalline Si solar cells, 8:23288 (J:US)

SILICONES
Mechanical Properties
Material properties for TR-55 and silicone elastomeric cushions, 8:24033 (R:US)

SILVER
Electric Conductivity
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Ion-Atom Collisions
Observation of the recoil effect on the K-shell excitation probabilities in ion-atom collisions, 8:24543 (RA:DE:In German)
Rotationally induced L-shell excitation in energetic Ag + Ag and Ag + Cs collisions, 8:24536 (RA:DE:In German)
Magnetic Properties
Magnetic-property changes in epitaxial metal-film sandwiches, 8:23949 (R:US)
Superconductivity
Superconductivity in Au-Cr-Au and Ag-Pd-Ag epitaxial metal film sandwiches, 8:23944 (R:US)

SILVER 109 TARGET
Argon 40 Reactions
Measurement of neutron multiplicity distributions with scintillator tank, 8:24198 (RA:DE:In German)

SILVER IODIDES
Crystal-Phase Transformations
Molecular dynamics studies of superionic conductors, 8:24031 (R:US)
Ionic Conductivity
Molecular dynamics studies of superionic conductors, 8:24031 (R:US)

SILVER IONS
Ion-Atom Collisions
Rotationally induced L-shell excitation in energetic Ag + Ag and Ag + Cs collisions, 8:24536 (RA:DE:In German)

SIMS
See MASS SPECTROSCOPY

SISTER CHROMATID EXCHANGES
Kinetics
Kinetics of mutation and sister-chromatid exchange induction by ethyl methanesulfonate in Chinese hamster ovary cells, 8:24476 (J:NL)

SKELETON
Genetic Radiation Effects
Studies on the induction of dominant skeletal mutations by radiation (X radiation and gamma radiation), 8:24383 (RA:US)
Low Dose Irradiation
Risk estimates for bone, 8:24363 (R:US)

SKIN
Biological Radiation Effects
Radiation carcinogenesis (Neutrons, ultraviolet radiation), 8:24388 (RA:US)

SLAGS
Fluid Flow
COMRC1; slag transport models for MHD systems (IBM360,370,303x; FORTRAN IV), 8:23766 (R:US)
SLGTR; slag transport models for duct surfaces (IBM360,370; FORTRAN IV), 8:23764 (R:US)

SLOT OVENS
See COKE OVENS

SLUDGES
Chemical Composition
Waste sludge composition at the Savannah River Plant, 8:23180 (J:US)

SLUGS (FUEL)
See FUEL RODS

SLURRIES (FUEL)
See FUEL SLURRIES

SMALL ANGLE SCATTERING
Measuring Instruments
National Center for Small-Angle Scattering Research, 8:24732 (BA:US)
Research Programs
National Center for Small-Angle Scattering Research, 8:24732 (BA:US)

SMALL-SCALE HYDROELECTRIC POWER PLANTS
Appropriate technologies for basic energy needs in rural India. Working paper, 8:23759 (R:US)
Hydraulic Turbines
Sample survey of traditional water wheels and small water turbines in nepal: a preliminary report, 8:23242 (R:US)
Water Wheels
Sample survey of traditional water wheels and small water turbines in nepal: a preliminary report, 8:23242 (R:US)

SMELTING
Air Pollution Abatement
Environmental pollution control at the AMAX-Homestake lead smelter, 8:24245 (J:US)
Environmental Effects
Heavy metals in the environs of a smelter, 8:24292 (J:US)

SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE

SMOKE DETECTORS
Performance
Fire tests in ventilated rooms: detection of cable-tray and exposure fires, 8:23420 (R:US)

SO-4 GROUPS
Irreducible Representations
Relations between irreducible representations of the hyperoctahedral group and O(4) and SO(4), 8:24630 (R:DE)

SODIUM
Entropy
Predissociation in an intense electromagnetic field, 8:24754 (J:US)
Fires
SOMIX1; sodium spray fires in cylindrical cell (IBM370; FORTRAN IV H Extended), 8:23508 (R:US)
Free Energy
Predissociation in an intense electromagnetic field, 8:24754 (J:US)
Thermochemical Heat Storage
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R:US)
Thermodynamic Properties
Calculation of thermophysical properties of sodium, 8:23516 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

SODIUM 22
Hyperfine Structure
Hyperfine field at ^{22}Na in nickel, 8:23959 (RA:DE:In German)

SODIUM BROMIDES
Corrosive Effects
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)

SODIUM CHLORIDES
Corrosive Effects
Corrosion behavior of high density tungsten alloys, 8:23899 (RA:US)
Environmental effects on fatigue crack initiation and early propagation, 8:23907 (RA:US)
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)
Crystal Defects
Charge transfer complexes of molecular oxygen in $NaClO_3$ and $KClO_3$ studied by resonance Raman and infrared spectroscopy, 8:24061 (J:US)
Photolysis
Charge transfer complexes of molecular oxygen in $NaClO_3$ and $KClO_3$ studied by resonance Raman and infrared spectroscopy, 8:24061 (J:US)

Sintering
Influence of particle size on the sintering kinetics of ultrapure sodium chloride, 8:24043 (J:US)
SODIUM FLUORIDES
Corrosive Effects
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM IODIDES
Corrosive Effects
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)
SODIUM MINERALS
See MINERALS
SODIUM OXIDES
Reduction
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R:US)
Thermochemical Heat Storage
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R:US)
SODIUM PHOSPHATES
Crystal Structure
Structure and conductivity of the NASICON analog $Na_3SC_2(PO_4)_3$, 8:24058 (R:US)
Ionic Conductivity
PHOS1; pH & conductivity of sodium phosphate solutions (DEC10; BASIC), 8:24055 (R:US)
SODIUM SILICATES
Electronic Structure
XPS study of CaO in sodium silicate glass, 8:24030 (R:US)
Molecular Structure
XPS study of CaO in sodium silicate glass, 8:24030 (R:US)
SODIUM SULFATES
Phase Diagrams
Thermodynamics of molten sulfate mixtures, 8:24066 (J:US)
SOILING
See SURFACE CONTAMINATION
SOILS
Classification
Mineralogy of the ILWAS lake-watering, 8:24499 (RA:US)
Environmental Transport
ODMOD; soil-water trace-containment transport (IBM360,370; FORTRAN IV (97%) and BAL (3%)), 8:24274 (R:US)
Hanford Reservation
Field and laboratory evaluation of the mobility of cobalt-60/EDTA in an arid environment, 8:23167 (R:US)
Radionuclide Migration
Field and laboratory evaluation of the mobility of cobalt-60/EDTA in an arid environment, 8:23167 (R:US)
Radionuclide migration of the elements I, Sr, Cs and Ce in subsurface loose rocks, 8:24263 (R:DE:In German)
Sorptive Properties
Field and laboratory evaluation of the mobility of cobalt-60/EDTA in an arid environment, 8:23167 (R:US)
X-Ray Diffraction
Mineralogy of the ILWAS lake-watering, 8:24499 (RA:US)
SOLAR ABSORBERS
Thermal Efficiency
Sp-c12-301: thermal performances of solar energy absorbers, 8:23354 (R:US:SW)
SOLAR AIR CONDITIONING
Demonstration Programs
Instrumented solar-demonstration systems. Project description summaries, January 1979, 8:23327 (R:US)
SOLAR AIR HEATERS
Design
Plastic solar air heaters of a novel design, 8:23352 (R:DE)
Performance
Plastic solar air heaters of a novel design, 8:23352 (R:DE)
Testing
Plastic solar air heaters of a novel design, 8:23352 (R:DE)
SOLAR BATTERIES
See SOLAR CELL ARRAYS
SOLAR CELL ARRAYS
Environmental Impacts
Photovoltaic energy systems: environmental concerns and control technology needs, 8:23277 (R:US)

SOLUTES
Adsorption
Study of the physical-chemical mechanisms and variables which affect the transport of inorganic and organic microcontaminants in heterogeneous systems. Technical progress report, 1 July 1980-1 July 1983, 8:24279 (R:US)

SOLUTION MINING
License Applications
Standard format and content of license applications, including environmental reports, for in-situ uranium solution mining, 8:23102 (R:US)

SOLVENT EXTRACTION
Advantages/limitations of solvent extraction, ozonation, and carbon adsorption for reduction of nonbiodegradable residuals in METC fixed-bed gasification wastewaters. Final report, 8:22925 (R:US)
SOLVENT-REFINED COAL PROCESS
See SRC PROCESS
SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS
SRC PROCESS
SOMATIC MUTATIONS
Genetics
Transposable elements and genetic instabilities in crop plants, 8:24339 (J:US)
SOOT
Chemical Reaction Yield
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels. Progress report, February 16, 1982-February 15, 1983, 8:24082 (R:US)
Diffusion
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels. Progress report, February 16, 1982-February 15, 1983, 8:24082 (R:US)
Particle Size
Diffusion-flame studies of the chemical and physical mechanisms of soot formation from aromatic and substituted-aromatic fuels. Progress report, February 16, 1982-February 15, 1983, 8:24082 (R:US)
SOUND
See SOUND WAVES
SOUND WAVES
Scattering
Acoustic scattering by elastic solid cylinders and spheres in viscous fluids, 8:24753 (J:US)
SOUTH ATLANTIC BIGHT
Oceanography
Continental Shelf processes affecting the oceanography of the South Atlantic Bight. Progress report, June 1978-November 1981, 8:24502 (R:US)
SOUTH CAROLINA
Wind
Spectral scales in the atmospheric boundary layer, 8:24253 (J:US)
SOUTH KOREA
See REPUBLIC OF KOREA
SOVIET UNION
See USSR
SOYBEAN PLANT
See GLYCINE HISPIDA
SOYBEANS
Productivity
Ozone impacts on the productivity of selected crops (Corn, wheat, soybean and peanut crops), 8:24403 (R:US)
SPACE LATTICES
See CRYSTAL LATTICES
SPACECRAFT POWER SUPPLIES
Radioisotope Heat Sources
Flight-systems safety program, September 1982. Progress report, 8:23202 (R:US)
SPAIN
Research Programs
Optimum conditions (technical and economic) for steel industry coke, 8:22932 (R:MX:In Spanish)
SPECTRAL FUNCTIONS
Time-Series Analysis
MESA; maximum entropy time series analysis (IBM360,370; FORTRAN IV), 8:25250 (R:US)
SPECTRAL SHIFT CONTROL
Extending BWR burnup with spectral shift control, 8:23535 (RA:US)
SPENT FUEL CASKS
Impact Tests
Study and full-scale test of a high-velocity grade-crossing simulated accident of a locomotive and a nuclear-spent-fuel shipping cask, 8:24111 (R:US)
Seals
Grayloc seal static tests, 8:24112 (R:US)
SPENT FUEL ELEMENTS
Reprocessing
Effect of high solvent radiation exposures on TBP processing of spent LMFBR fuels, 8:23519 (R:US)
Tentative evaluation of consequences of extended burnup on reprocessing of LWR spent fuel, 8:23463 (RA:US)
SPENT FUEL STORAGE
Cost
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Criticality
Nuclear criticality safety experiments, calculations, and analyses: 1958 to 1982. Volume 1. Lookup tables, 8:23544 (R:US)
Nuclear criticality safety experiments, calculations, and analyses - 1958 to 1982. Volume 2. Summaries. Compilation of papers from the Transactions of the American Nuclear Society, 8:23545 (R:US)
Economics
Economics of spent LWR fuel storage (Comparison of reracking, new at-reactor storage facilities, and away-from-reactor storage facilities), 8:23116 (R:US)
Forecasting
Spent-fuel-storage requirements: an update of DOE/RL-82-1 (To year 2000 AD), 8:23114 (R:US)
Fuel Racks
Rack test and facility enhancement program, 8:23115 (R:US)
Storage Facilities
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Rack test and facility enhancement program, 8:23115 (R:US)
SPENT FUELS
Inspection
Role of mockup testing in the Hot Fuel Examination Facility remote operations, 8:24103 (R:US)
Isotope Ratio
Isotope correlations for safeguards surveillance and accountancy methods, 8:23190 (R:US)
Laser Isotope Separation
Laser isotope separation in nuclear-waste by-product utilization, 8:23176 (R:US)
Leaching
Eh and fission product solubilities: two factors in the leaching of UO_2, 8:23109 (J:US)
Purex Process
CONSEPT; controller-run solvent extraction (IBM3033,360,370; FORTRAN IV (98%) and BAL (2%)), 8:23110 (R:US)
PUBG; purex solvent extraction process model (IBM3033;CDC CYBER175; FORTRAN IV), 8:23111 (R:US)
Reprocessing
International fuel-cycle and waste-management technology-exchange activities sponsored by the United States Department of Energy: FY 1982 evaluation report, 8:23163 (R:US)
Nuclear criticality safety experiments, calculations, and analyses: 1958 to 1982. Volume 1. Lookup tables, 8:23544 (R:US)
Nuclear criticality safety experiments, calculations, and analyses - 1958 to 1982. Volume 2. Summaries. Compilation of papers from the Transactions of the American Nuclear Society, 8:23545 (R:US)
US Department of Energy comments on the paper entitled "Bubble, bubble, toil and trouble: reprocessing nuclear spent fuel", 8:23112 (R:US)
Test Facilities
Role of mockup testing in the Hot Fuel Examination Facility remote operations, 8:24103 (R:US)
Thorex Process
CONSEPT; controller-run solvent extraction (IBM3033,360,370; FORTRAN IV (98%) and BAL (2%)), 8:23110 (R:US)

SPERMATOCYTES
Meiosis
Meiotic studies of rearrangements by synaptonemal complex analysis, 8:24337 (RA:US)
SPERMATOGONIA
Gene Mutations
Nature of specific-locus mutations induced by ethylnitrosourea in mouse spermatogonia, 8:24424 (RA:US)
Genetic Radiation Effects
Radiation induction of heritable translocations in mice (X radiation), 8:24384 (RA:US)
Specific-locus mutation frequencies in mouse stem-cell spermatogonia at very low radiation dose rates, and their use in the estimation of genetic hazards of radiation in man (Gamma radiation), 8:24382 (RA:US)
SPHEROMAK DEVICES
Computerized Control Systems
Control and data acquisition systems for the S-1 spheromak, 8:25182 (J:US)
Data Acquisition Systems
Control and data acquisition systems for the S-1 spheromak, 8:25182 (J:US)
Design
Sheromak approach to high power density reactors, 8:24940 (J:US)
Magnet Coils
Engineering design and construction of the S-1 spheromak coil systems, 8:25034 (J:US)
SPINACH
Nutrition
Increasing total and biologically active chromium in wheat grain and spinach by spraying with chromium salts, 8:24467 (J:US)
SPIN-LATTICE RELAXATION
Differential PAC
Local 4f moment studies by TDPAD, 8:24740 (RA:DE:In German, English)
SPIN-OFF
See TECHNOLOGY TRANSFER
SPOIL BANKS
Revegetation
Soil-depth requirements to reclaim surface-mined areas in the northern Great Plains. Open file report 29 Jul 76-8 Apr 82, 8:22965 (R:US)
SPRINGS
Mechanical springs only.
Dynamic Loads
SHOCK; dynamic response of lumped-mass systems (CDC6600,7600; FORTRAN IV), 8:24087 (R:US)
SPUTTERING
Computer Codes
Physical sputtering code for fusion applications, 8:25172 (J:US)
SRC PROCESS
Pilot Plants
Overview of coal liquefaction in the US Department of Energy, 8:22917 (R:US)
STAINLESS STEEL-304
Stress Corrosion
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)
STAINLESS STEEL-310
Corrosion
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R:US)
Failures
Failure observations of pressurized tubes of candidate alloys in 980°C coal-gasification atmospheres, 8:22930 (R:US)
STAINLESS STEEL-316
Crack Propagation
Environmental effects on elevated temperature fatigue crack propagation in Type 316 stainless steel for fusion reactor applications, 8:23922 (RA:US)
Embrittlement
Helium embrittlement of stainless steels at ambient temperature, 8:24911 (J:US)
Physical Radiation Effects
Microstructural and microchemical comparisons of AISI 316 irradiated in HFIR and EBR-II, 8:23955 (R:US)
STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-310
STAINLESS STEEL-316
Corrosion
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
Plant Materials Program: progress June 1981-May 1982, 8:23465 (R:US)
Creep
Micromechanical modeling of microstructural damage in creeping alloys. Progress report, March 1, 1982-February 28, 1983, 8:23950 (R:US)
Damage
Micromechanical modeling of microstructural damage in creeping alloys. Progress report, March 1, 1982-February 28, 1983, 8:23950 (R:US)
Embrittlement
Helium embrittlement of stainless steels at ambient temperature, 8:24911 (J:US)
Erosion
Arc velocity and erosion for stainless steel and aluminium cathodes, 8:24886 (J:NL)
Microstructure
Micromechanical modeling of microstructural damage in creeping alloys. Progress report, March 1, 1982-February 28, 1983, 8:23950 (R:US)
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Oxidation
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Stress Corrosion
Analysis of a heat-transfer fluid fill pipe failure, 8:23914 (RA:US)
Surface Cleaning
Light impurity removal from stainless steel by atomic hydrogen, 8:24881 (J:NL)
STANDING CROP
See BIOMASS
STARFIRE TOKAMAK
Cost
Tokamak reactor cost model based on STARFIRE/WILDCAT costing, 8:24818 (R:US)
Current-Drive Heating
Driver options for steady-state tokamak reactors, 8:25079 (J:US)
Design
Nuclear analysis of a d-d tokamak reactor design, wildcat, 8:24912 (J:US)
Deuteron Reactions
Nuclear analysis of a d-d tokamak reactor design, wildcat, 8:24912 (J:US)
ECR Heating
Driver options for steady-state tokamak reactors, 8:25079 (J:US)
ICR Heating
FED and starfire icrh systems, 8:25099 (J:US)
Icrh system characteristics, 8:25100 (J:US)
STATE BUILDINGS
See PUBLIC BUILDINGS
STATISTICAL DATA
Use only in conjunction with literary indicator labels for data flagging.
Data Acquisition
Directory of Energy Data Collection Forms, 8:23691 (R:US)
Reporting Requirements
Directory of Energy Data Collection Forms, 8:23691 (R:US)
STATISTICAL MECHANICS
Nonlinear Problems
Breather annihilation by simple dissipation, 8:24755 (J:US)
STEADY FLOW
Computer Codes
EVITS; steady state two-dimensional fluid flow (IBM360,370; FORTRAN IV), 8:24568 (R:US)

STEAM GENERATORS
Cleaning
Cleaning steam generators off-line (soaking) with chelants. Final report (PWR), 8:23497 (R:US)
Design
Foster Wheeler protected bayonet-tube steam-generator conceptual designs, 8:23518 (R:US)
Evacuated Tube Collectors
Direct solar steam-generating system, 8:23316 (R:US)
Heat Transfer
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
Thermal and hydraulic code verification: ATHOS2 and model boiler No. 2 data. Volume 3. Final report, 8:23503 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report (PWR), 8:23502 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report (PWR), 8:23501 (R:US)
Thermal-hydraulic code qualification: ATHOS2 and data from Bugey 4 and Tricastin 1. Final report (PWR), 8:23499 (R:US)
Hydraulics
Flow-induced vibration of a curved tube array subject to liquid cross flow, 8:23469 (R:US)
Performance of large LWR system codes in calculating the steam-generator heat-transfer behavior, 8:23601 (R:US)
Thermal and hydraulic code verification: ATHOS2 and model boiler No. 2 data. Volume 3. Final report, 8:23503 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report (PWR), 8:23502 (R:US)
Thermal and hydraulic code verification: ATHOS2 and Model Boiler No. 2 data. Final report (PWR), 8:23501 (R:US)
Thermal-hydraulic code qualification: ATHOS2 and data from Bugey 4 and Tricastin 1. Final report (PWR), 8:23499 (R:US)
Mechanical Vibrations
Flow-induced vibration of a curved tube array subject to liquid cross flow, 8:23469 (R:US)
Modifications
Safety-Evaluation Report related to the D2/D3 steam-generator design modification (PWR), 8:23624 (R:US)
Pollution Control Equipment
Start-up and performance of a high-sulfur dry-scrubber system, 8:22946 (R:US)
Tubes
Intergranular attack in Inconel 600 nuclear steam generator tubes, 8:23923 (RA:US)
STEAM INJECTION
Equipment
Downhole steam injector, 8:23021 (P:US)
STEAM TURBINES
Failures
Scale modeling of turbine-missile impact into concrete. Final report (PWR), 8:23611 (R:US)
STEAMBOAT SPRINGS
Geochemical Surveys
Geothermal-resource assessment of the Steamboat-Routt Hot Springs area, Colorado. Resources Series 22, 8:23368 (R:US)
Geophysical Surveys
Geothermal-resource assessment of the Steamboat-Routt Hot Springs area, Colorado. Resources Series 22, 8:23368 (R:US)
Resource Assessment
Geothermal-resource assessment of the Steamboat-Routt Hot Springs area, Colorado. Resources Series 22, 8:23368 (R:US)
STEEL INDUSTRY
See METAL INDUSTRY
STEEL-ASTM-A533-B
Fracture Properties
Effect of neutron irradiation on dynamic fracture toughness of A533 Grade B Class 1 pressure vessel steel , 8:23919 (RA:US)
Physical Radiation Effects
Effect of neutron irradiation on dynamic fracture toughness of A533 Grade B Class 1 pressure vessel steel , 8:23919 (RA:US)
STEELS
See also AUSTENITIC STEELS
CARBON STEELS
NICKEL STEELS
STAINLESS STEELS
Corrosion
In-situ studies of reduction reactions of weathering steel surface films by Raman spectroscopy, 8:23900 (RA:US)
Corrosion Fatigue
Assessment of corrosion fatigue behavior of offshore structures, 8:23904 (RA:US)
Fatigue of welded structural steel in sea water, 8:23905 (RA:US)
Crack Propagation
Fatigue crack growth in aqueous and gaseous environments, 8:23903 (RA:US)
Investigation of fatigue crack growth in a 288°C PWR water environment by a constant ΔK test method, 8:23906 (RA:US)
Ductility
Tensile and fracture toughness behavior of AISI 4130 steel in the presence of eutectic Pb-Sn solder, 8:23917 (RA:US)
Embrittlement
Metallographic and fractographic aspects of liquid-metal embrittlement (Al-Zn-Mg (6.3% Zn 2.9% Mg); Ni 200 alloy (99.5% Ni); Inconel 601; D6AC steel), 8:23915 (RA:US)
Fatigue
Fatigue crack growth in aqueous and gaseous environments, 8:23903 (RA:US)
Investigation of fatigue crack growth in a 288°C PWR water environment by a constant ΔK test method, 8:23906 (RA:US)
Fracture Properties
Fracture toughness of PWR-components supports, 8:23505 (R:US)
Tensile and fracture toughness behavior of AISI 4130 steel in the presence of eutectic Pb-Sn solder, 8:23917 (RA:US)
Fractures
Metallographic and fractographic aspects of liquid-metal embrittlement (Al-Zn-Mg (6.3% Zn 2.9% Mg); Ni 200 alloy (99.5% Ni); Inconel 601; D6AC steel), 8:23915 (RA:US)
Freezing
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
Fuel-Cladding Interactions
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
High-Level Radioactive Wastes
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
Melting
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
Microstructure
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Oxidation
Influence of interfacial stresses on oxide scale adherence (Types 1018, 304, and 430), 8:23925 (RA:US)
Microstructural degradation in boiler steels (SA210A1, SA209T1, SA213-T11, SA213-T22, SA213-321, SA213-347), 8:23928 (RA:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Recycling
Steel-mill-residue recycling processes: an energy and economic analysis. Project final report, 8:23857 (R:US)
Stress Corrosion
Slow strain rate stress corrosion testing of boiler construction materials in synthetic flue gas at elevated temperatures (SA 213 T11 (1.25% Cr-.5% Mo); SA 213 T 22 (2.25% Cr - 1% Mo)), 8:23910 (RA:US)
Tensile Properties
Tensile and fracture toughness behavior of AISI 4130 steel in the presence of eutectic Pb-Sn solder, 8:23917 (RA:US)

Yield Strength
Buckling investigation of ring-stiffened cylindrical shells with reinforced openings under unsymmetrical axial loads, 8:23551 (R:US)

STELLARATOR TYPE REACTORS
Design
Conceptual design studies of the Modular Stellarator Reactor (MSR), 8:24932 (J:US)
UWTOR-M, a conceptual design study of a modular stellarator power reactor, 8:24939 (J:US)
Modular Structures
Conceptual design studies of the Modular Stellarator Reactor (MSR), 8:24932 (J:US)
UWTOR-M, a conceptual design study of a modular stellarator power reactor, 8:24939 (J:US)

STELLARATORS
See also JIPP STELLARATOR
WENDELSTEIN-7 STELLARATOR
Magnetic Field Configurations
Tokamak-stellarator hybrid configurations with unlinked helical coils, 8:24832 (R:JP)
Plasma Density
Calculation of hydrogen density in toroidal plasma, 8:24793 (J:NL)

STEM CELLS
Genetic Radiation Effects
Mammalian biochemical genetics (X radiation and mutagens), 8:24379 (RA:US)

STERILITY
Genetics
Investigation of the causes of genetic male sterility, 8:24336 (RA:US)

STIMULATED EMISSION DEVICES
See LASERS

STIRLING ENGINES
Design
Development of a quiet Stirling cycle multi-fuel engine for electric power generation. Final report Feb-Aug 82, 8:23397 (R:US)

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE BATTERIES (LEAD-ACID)
See LEAD-ACID BATTERIES

STORAGE FACILITIES
Capacity
Spent-fuel-storage requirements: an update of DOE/RL-82-1 (To year 2000 AD), 8:23114 (R:US)
Cost
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Design
MRS/IS facility co-located with a repository: preconceptual design and life-cycle cost estimates, 8:23162 (R:US)
Site Selection
Geological and geotechnical studies for the construction of pilot caverns in rock for the storage of crude oil, hydrocarbon products and LPG, 8:23045 (R:DE:In German)

STORAGE RINGS
Beam Stacking
Stochastic stacking without filters, 8:24194 (R:US)

STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE

STORAGE TUBES
See ELECTRON TUBES

STORES
See COMMERCIAL BUILDINGS

STOVER
See AGRICULTURAL WASTES

STRATEGIC PETROLEUM RESERVE
Cost Overruns
Excessive costs incurred by the Strategic Petroleum Reserve program for rental and other services, 8:23722 (R:US)
Program Management
Excessive costs incurred by the Strategic Petroleum Reserve program for rental and other aervices, 8:23722 (R:US)

STRAW
Decomposition
Straw processing, 8:23864 (R:DE:In German)
Gasification
Development of an energy converter for the production of heat, mechanical and electrical energy through the gasificaton of wood and straw in a batch gasifier with an output of 50-150 kw. extended to include the gasification of batched biomass with an output of 150-400 kw. Final report, 8:23226 (R:US)
Production
Production of cereal straw and corn stalks for energy purposes. Photosynthetic production of organic matter, 8:23271 (R:XE:FR)
Resource Potential
Production of cereal straw and corn stalks for energy purposes. Photosynthetic production of organic matter, 8:23271 (R:XE:FR)

STREAMS
Geochemical Surveys
Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R:US)
Water Quality
Stream water quality in the coal region of Pennsylvania. General technical report, 8:22962 (R:US)
Stream water quality in the coal region of Alabama and Georgia. General technical report (final), 8:22963 (R:US)

STREETS
See ROADS

STRESS ANALYSIS
Computer Codes
AXICRP; finite element code for creep analysis (CDC6600,7600,CYBER74; FORTRAN IV), 8:23513 (R:US)
CREEP-PLAST2; 2-dimensional inelastic structural analysis (IBM360,370; FORTRAN IV (95%) and BAL (5%)), 8:24090 (R:US)
SWAP9; stress-wave analysis in 1-dimensional strain (CDC6600,7600; FORTRAN IV), 8:24092 (R:US)
Computer Graphics
GRFPAK; plot package for CORTES FEM programs (IBM360,370; FORTRAN IV), 8:24086 (R:US)
Finite Element Method
Finite element analyses and instrumentation layout for the superconducting test facility TOSKA, 8:25013 (J:US)

STRIPPER FOILS
See BEAM STRIPPERS

STRIPPERS
See BEAM STRIPPERS

STRONG INTERACTIONS
Quantum Chromodynamics
Implications of QCD for soft hadronic and nuclear processes, 8:24612 (RA:US)

STRONTIUM
Separation Processes
Cesium and strontium fractionation from HLW for thermal-stress reduction in a geologic repository, 8:23166 (R:US)
Toxicity
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)

STRONTIUM 78
Beta-Plus Decay
Halflife and decay of ^{78}Sr, 8:24670 (RA:DE:In German)
Gamma Cascades
Gamma ray spectroscopy in ^{78}Sr and ^{83}Zr, 8:24669 (RA:DE:In German)

STRONTIUM 88 TARGET
Krypton 86 Reactions
Role of deformation and shell effects in deep inelastic collisions of ^{86}Kr + ^{88}Sr,^{90}Zr,^{92}Mo at energies close to the Coulomb barrier, 8:24667 (RA:DE:In German, English)

STRONTIUM 90
Inventories
Byproduct inventories, 8:23171 (R:US)
Radioisotope Heat Sources
Heat-source specification 500 watt(e) RTG, 8:23201 (R:US)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)
STRUCTURAL BUCKLING
See DEFORMATION
STRUCTURES (BUILDINGS)

SULFATES
See also COBALT SULFATES
NICKEL SULFATES
SODIUM SULFATES
Deposition
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)
Mass Balance
Lake acidification during spring snowmelt: processes and causes, 8:24285 (RA:US)
Washout
Wet and dry deposition into Adirondack watersheds, 8:24235 (RA:US)
SULFIDES
See also CADMIUM SULFIDES
EUROPIUM SULFIDES
HYDROGEN SULFIDES
LANTHANUM SULFIDES
MOLYBDENUM SULFIDES
POTASSIUM SULFIDES
Corrosive Effects
Sulfide attack in steam surface condensers, 8:23896 (RA:US)
SULFONIC ACID ESTERS
See also EMS
METHYL METHANESULFONATE
Phase Studies
Phase behaviour of alkylxylenesulphonate/oil/brine systems, 8:23023 (BA:FR)
SULFUR
Atmospheric Chemistry
SULCAL; model of sulfur chemistry in a plume (IBM360,370; FORTRAN IV), 8:24228 (R:US)
Retention
Exploratory and basic fluidized-bed combustion studies. Annual report, October 1980-September 1981, 8:24148 (R:US)
Review of low-rank-coal AFBC testing, 8:22996 (R:US)
SULFUR DIOXIDE
POLUTE; forest air pollutant uptake model (IBM360,370; CSMP), 8:24301 (R:US)
Biological Effects
Analysis of health effects resulting from population exposures to ambient particulate matter. Annual progress report, July 16, 1982-March 15, 1983, 8:24407 (R:US)
Approach to modelling vegetation yield reduction from point-source emissions of sulfur dioxide, 8:24400 (R:US)
Effect of NO_2 and SO_2 alone and in combination on the productivity of field-grown soybeans, 8:24406 (R:US)
Ecological Concentration
Air pollution by sulfur dioxide, 8:24240 (R:DE:In German)
Environmental Impacts
Approach to modelling vegetation yield reduction from point-source emissions of sulfur dioxide, 8:24400 (R:US)
Health Hazards
Analysis of health effects resulting from population exposures to ambient particulate matter. Annual progress report, July 16, 1982-March 15, 1983, 8:24407 (R:US)
Monitoring
Simplified approaches to protecting PSD Class I areas. Final report, 8:24302 (R:US)
Personnel Monitoring
State-of-the-art of commercially available personal monitors for NO/sub x/, SO_2 and particulate matter in ambient air, 8:24246 (J:US)
Removal
Control of sulfur dioxide, chlorine, and trace-element emissions from coal-fired boilers by fabric filtration, 8:22945 (R:US)
DOE's electron-beam-irradiation development program, 8:22954 (R:US)
Simultaneous removal of SO_2 and NO/sub x/ from flue gas employing a fluidized-bed copper oxide process, 8:22953 (R:US)
SULFUR FLUORIDES
Dielectric Properties
Boundary layer property of definite polluted epoxide resin insulators in sulfur hexafluoride by high alternating voltage, 8:23439 (R:DE:In German)
Electronic Structure
Photoelectron branching ratios and angular distributions for the valence levels of SF_6 in the range 16< or =hν< or =30 eV, 8:24555 (J:US)
Photoionization
Photoelectron branching ratios and angular distributions for the valence levels of SF_6 in the range 16< or =hν< or =30 eV, 8:24555 (J:US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Energy-Level Transitions
Beam-foil spectroscopy at Argonne National Laboratory, 8:24517 (R:US)
Ion Spectroscopy
Beam-foil spectroscopy at Argonne National Laboratory, 8:24517 (R:US)
SULFUR OXIDES

Air Pollution Abatement
High pressure combustor at Leatherhead Test seven results: dolomite size effects, 8:24151 (R:US)
Chemical Reactions
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982 (Sulfur trioxide), 8:24003 (R:US)
Corrosive Effects
High-temperature corrosion of ceramics. Progress report, June 15, 1981-June 14, 1982 (Sulfur trioxide), 8:24003 (R:US)
Removal
Advanced environmental control technology , 8:22952 (R:US)
Scavenging
Precipitation-scavenging chemistry for sulfate and nitrate from the SURE and related data. Volume 2. Final report, 8:24224 (R:US)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Corrosive Effects
Stress corrosion of type 304 steel in H_2SO_4 alkali halide environments, 8:23912 (RA:US)
SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING CABLES
Cooling
Transient cooling in internally cooled, cabled superconductors (ICCS), 8:24124 (J:US)
Energy Losses
Lorenz force induced strand motion in a superconducting cable, 8:25040 (J:US)
Heat Transfer
Transient cooling in internally cooled, cabled superconductors (ICCS), 8:24124 (J:US)
Lorentz Force
Lorenz force induced strand motion in a superconducting cable, 8:25040 (J:US)

SUPERCONDUCTING COILS
Cooling
Modeling the cooldown of force cooled coils, 8:24121 (J:US)
Design
Design of a superconducting 20 MJ induction coil, 8:25044 (J:US)
High-Voltage Pulse Generators
Control of energy transfer with an inductor-convertor bridge, 8:24102 (R:US)
Power Losses
Studies on stability and a.c. losses of filamentary conductors for fast ramp rate ohmic heating coils, 8:25041 (J:US)
Quenching
Measurement and theoretical calculation of quench velocities within large fully epoxy impregnated superconducting coils, 8:24123 (J:US)
Stability
Studies on stability and a.c. losses of filamentary conductors for fast ramp rate ohmic heating coils, 8:25041 (J:US)
Test Facilities
Argonne pulsed cable test facility for the development of superconducting ohmic heating coils, 8:25052 (J:US)
SUPERCONDUCTING COMPOSITES
Critical Current
Temperature dependence of critical current superconducting for in situ composites, 8:23974 (J:US)
Specific Heat
Specific heat of in situ superconducting composites, 8:23973 (J:US)
Stability
Stability of an aluminum-NbTi composite conductor at reduced temperatures, 8:24129 (J:US)
Technology Assessment
Workshop on superconducting for magnets: frontiers of technology, 8:24128 (J:US)
SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Superconducting Composites
Stability of an aluminum-NbTi composite conductor at reduced temperatures, 8:24129 (J:US)
Superconductors
Stability of an aluminum-NbTi composite conductor at reduced temperatures, 8:24129 (J:US)
SUPERCONDUCTING MAGNETS
Latest status of the Japanese LCT coil and the domestic test facility, 8:25053 (J:US)
Progress renort on the tandem contribution to the IEA Large Coil Task, 8:25055 (J:US)
Results of the cooldown analysis of the Swiss LCT coil, 8:25054 (J:US)
Acoustic Emission Testing
Acoustic emission triangulation of mechanical disturbances in superconducting magnets, 8:25016 (J:US)
Construction
Status of the magnet systems and highlight of the main assembly problems, 8:25032 (J:US)
Cooling Systems
Enhanced cooling with helium channels in the TF coil casing for FED, 8:25025 (J:US)
Two-phase helium-IV quench analysis for superconducting magnets, 8:25010 (J:US)
Design
Design, construction, and test of a 113-mm bore solenoid with NbTi cable-in-conduit superconducting windings, 8:24126 (J:US)
Design and testing of a dual 8-T 380-mm/12-T 220-mm split superconducting solenoid for ORNL, 8:24125 (J:US)
Design characteristics of the TFTR sector module (I), 8:25022 (J:US)
Design of epoxy-free superconducting dipole magnets and performance in both helium I and pressurized helium II, 8:24117 (J:US)
Development of TFTR sector module assembly procedures (II), 8:25023 (J:US)
Development of superconducting poloidal field coils for tokamak reactors, 8:25043 (J:US)
EBTR magnet design, 8:25012 (J:US)
Engineering feasibility challenges for the magnet community, 8:25033 (J:US)
Engineering, testing and manufacturing the general dynamics test coil for the Large Coil Program - an update, 8:25045 (J:US)
Enhanced cooling with helium channels in the TF coil casing for FED, 8:25025 (J:US)
Large-current conductor development for superconducting poloidal coils, 8:25057 (J:US)
Magnet design for INTOR, 8:25039 (J:US)
Magnet system for a thermal barrier Tandem Mirror Reactor, 8:24989 (J:US)
Model of toroidal magnet systems as orthotropic shells of finite thickness, 8:24991 (J:US)
Quench protection and design of large high current density superconducting magnets, 8:24122 (J:US)
Structural design procedures for FED magnets, 8:25035 (J:US)
Superconducting ohmic heating solenoid concept for ISX-C, 8:25014 (J:US)
Superconducting poloidal field coil studies for INTOR, 8:25046 (J:US)
TMX-axisymmetric magnet set design study, 8:24985 (J:US)
Disturbances
Acoustic emission triangulation of mechanical disturbances in superconducting magnets, 8:25016 (J:US)
Electric Arcs
Missile generation due to electrical arcing in high field fusion magnets, 8:25006 (J:US)
Electrical Faults
Safety consequences of shorted turns in a cryostable superconducting magnet, 8:23780 (J:US)
Safety implications of shorted turns in superconducting magnets for fusion, 8:25015 (J:US)
Electrical Testing
Engineering, testing and manufacturing the general dynamics test coil for the Large Coil Program - an update, 8:25045 (J:US)
Fabrication
Design, construction, and test of a 113-mm bore solenoid with NbTi cable-in-conduit superconducting windings, 8:24126 (J:US)
Fabrication experiences of the Coal-Fired Flow Facility superconducting dipole magnet, 8:23777 (J:US)
General Dynamics superconducting magnet for the Large Coil Program: a progress report, 8:24119 (J:US)
Hazards
Missile generation due to electrical arcing in high field fusion magnets, 8:25006 (J:US)
Heat Transfer
Pool boiling helium heat transfer from two large monolithic copper stabilizers, 8:25011 (J:US)
Joule Heating
Safety consequences of shorted turns in a cryostable superconducting magnet, 8:23780 (J:US)
Magnetic Shielding
Evaluation of the use of a normal shield to reduce transient field induced losses in tokamak superconducting coils, 8:24988 (J:US)
Manufacturing
Manufacture of 16,000 amp superconducting conductor for the tokamak toroidal field coil program, 8:25019 (J:US)
Materials
Thermal expansion of several materials for superconducting magnets, 8:24127 (J:US)
Materials Testing
Coil performance test of nb/sub 3/sn conductor to be used in the advanced cluster test facility, 8:25018 (J:US)
Development of ferritic weldments for grain-refined ferritic steels for 4.2K service, 8:23971 (R:US)
Mechanical Structures
Measurements of mechanical properties of superstructures materials for the CFFF superconducting MHD magnet, 8:23778 (J:US)
Structural behavior of the Bitter plate tf magnet for the Zephyr ignition test reactor, 8:25005 (J:US)

Organic Insulators
Effect of low-temperature reactor irradiation on organic insulators in superconducting magnets (II), 8:24021 (TJ:US)
Effect of low-temperature reactor irradiation on organic insulators in superconducting magnets (III), 8:24020 (TJ:US)
Performance Testing
Coil performance test of nb/sub 3/sn conductor to be used in the advanced cluster test facility, 8:25018 (J:US)
Design of epoxy-free superconducting dipole magnets and performance in both helium I and pressurized helium II, 8:24117 (J:US)
Pool Boiling
Pool boiling helium heat transfer from two large monolithic copper stabilizers, 8:25011 (J:US)
Pool boiling superconducting coils for the Large Coil Task, 8:25036 (J:US)
Power Losses
Evaluation of the use of a normal shield to reduce transient field induced losses in tokamak superconducting coils, 8:24988 (J:US)
Power Supplies
10 kA pulsed power supply for superconducting coils, 8:25070 (J:US)
10-kA pulsed power supply for superconducting coils, 8:24821 (R:US)
Application of power factor correction in the Tandem Mirror Experiment upgrade magnet power supply, 8:25069 (J:US)
Commissioning tests for the TEXTOR toroidal field power supply system, 8:25063 (J:US)
TEXT poloidal field power systems operation, 8:25026 (J:US)
TEXT toroidal field power supply operation, 8:25027 (J:US)
Quenching
Quench protection and design of large high current density superconducting magnets, 8:24122 (J:US)
Research Programs
United States Superconducting MHD Magnet Technology Development Program, 8:23779 (J:US)
Shape
Iterative numerical procedure for determining the shape of a constant tension 'D' magnet, 8:24986 (J:US)
Strains
Comparison between experimental and analytical winding prestrain for a circular solenoid, 8:25017 (J:US)
Stress Analysis
Iterative numerical procedure for determining the shape of a constant tension 'D' magnet, 8:24986 (J:US)
Model of toroidal magnet systems as orthotropic shells of finite thickness, 8:24991 (J:US)
Structural behavior of the Bitter plate tf magnet for the Zephyr ignition test reactor, 8:25005 (J:US)
Stresses
Comparison between experimental and analytical winding prestrain for a circular solenoid, 8:25017 (J:US)
Superconducting Composites
Workshop on superconducting for magnets: frontiers of technology, 8:24128 (J:US)
Test Facilities
Advances in the cluster test facility and the test module coil development, 8:25056 (J:US)
Finite element analyses and instrumentation layout for the superconducting test facility TOSKA, 8:25013 (J:US)
Testing
Design, construction, and test of a 113-mm bore solenoid with NbTi cable-in-conduit superconducting windings, 8:24126 (J:US)
Design and testing of a dual 8-T 380-mm/12-T 220-mm split superconducting solenoid for ORNL, 8:24125 (J:US)
Tests of the first development coils for EBT-P, 8:25051 (J:US)
Thermal Shields
Thermal design considerations of shields for levitated coils, 8:25024 (J:US)

SUPERCONDUCTORS
Cooling
Persistent resistive regions and cryogenic stability of composite conductors: effect of cooling spacers, 8:25042 (J:US)
Cryogenics
Persistent resistive regions and cryogenic stability of composite conductors: effect of cooling spacers, 8:25042 (J:US)
Current Density
Current densities of commercial NbTi-based alloys for high field applications, 8:24118 (J:US)
Electrical Testing
Origin of resistive voltage and the related problems in large-capacity Nb_3Sn conductor, 8:25020 (J:US)
Electronic Structure
SCF-X alpha-SW cluster molecular-orbital models of catalysts, alloys, magnetic materials, and superconductors. Interim report, 8:23891 (R:US)
Impurities
Magnetic impurities in superconductors. Progress report, August 1, 1982-June 30, 1983, 8:24745 (R:US)
Manufacturing
Production experience: the Nb/sub 3/Sn forced flow conductor for the Large Coil Program, 8:25049 (J:US)
Safety
Safety studies of cryostable superconductor, 8:24120 (J:US)
Soldering
Soldering studies of an aluminum stabilized superconductor, 8:25048 (J:US)
Stability
Safety studies of cryostable superconductor, 8:24120 (J:US)
Stability of an aluminum-NbTi composite conductor at reduced temperatures, 8:24129 (J:US)

TEXTOR TOKAMAK
Beam Neutralization
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Control Systems
Experience from the implementation of a control-and data acquisition system for the tokamak TEXTOR, 8:25176 (J:US)
Data Acquisition
Experience from the implementation of a control-and data acquisition system for the tokamak TEXTOR, 8:25176 (J:US)
Electrical Testing
Magnetizing circuit of TEXTOR, 8:25029 (J:US)
ICR Heating
Icrf antenna design for a 3 MW, 3 s heating system on the TEXTOR tokamak, 8:25093 (J:US)
Magnetic Islands
Transport code calculations on the particle and energy unloading through overlapping magnetic islands, 8:24873 (J:NL)
Neutral Beam Sources
Conductance thermal accommodation and beaming from neutralizer gas-cells, 8:25087 (J:US)
Power Supplies
Commissioning tests for the TEXTOR toroidal field power supply system, 8:25063 (J:US)
Poloidal-field thyristor amplifier with improved power factor, for TEXTOR, 8:25062 (J:US)

TFR TOKAMAK
Data Acquisition Systems
Data acquisition system of TFR tokamak experiment, 8:25192 (J:US)
Divertors
RF divertor principle study in the TFR plasmas, 8:24861 (J:NL)

TFTR REACTORS
TFTR neutral beam test facility, 8:25067 (J:US)
Breeding Blankets
Design of a lithium blanket module for testing in the TFTR, 8:24980 (J:US)
Neutronic design for the TFTR lithium blanket module, 8:24975 (J:US)
Calorimeters
TFTR neutral beam calorimeter fabrication and instrumentation, 8:25215 (J:US)
Computerized Control Systems
Digitally controlled twelve-pulse firing generator, 8:25187 (J:US)
Control Systems
TFTR diagnostic vacuum controller, 8:25184 (J:US)
DC Amplifiers
Low noise, high impedance, dc coupled auto zeroing amplifier for TFTR, 8:25189 (J:US)
Design
Design characteristics of the TFTR sector module (I), 8:25022 (J:US)
Development of TFTR sector module assembly procedures (II), 8:25023 (J:US)
Engineering design of TFTR and it's impact on future tokamaks, 8:24942 (J:US)
Electric Grounds
TFTR grounding system, 8:25077 (J:US)
Electrical Insulation
Electrical insulation qualification tests for TFTR TF and PF coils, 8:25007 (J:US)
Electrical Insulators
Results of an insulator materials test program for application inside the TFTR plasma chamber, 8:25158 (J:US)
Energy Conversion
Design and cost of the TFTR power conversion system, 8:25133 (J:US)
Gas Injection
Design and development of the torus gas injection control system for TFTR, 8:25103 (J:US)
Limiters
Design and analysis of the TFTR fixed limiters - 1, 8:25201 (J:US)
Design and analysis of the TFTR fixed limiters - 2, 8:25202 (J:US)
Pumping and erosion rates for the TFTR and INTOR/FED limiter designs, 8:24856 (J:NL)
Magnet Coils
Description of the molding system for the epoxy impregnation of the TFTR poloidal field coils, 8:25021 (J:US)
Epoxy impregnation system for TFTR large coil program, 8:24919 (J:US)
Mechanical Structures
TFTR structural instrumentation, 8:25190 (J:US)
Neutral Atom Beam Injection
Analysis of optimal control theory applied to plasma position and current control during neutral beam heating in TFTR, 8:25101 (J:US)

Neutral Beam Sources
Cable information retrieval program, 8:25106 (J:US)
Cyrogenics for TFTR neutral beam test cell, 8:25117 (J:US)
Design of the precast, post-tensioned concrete shielding structure for the TFTR neutral beam test cell, 8:25116 (J:US)
Development of a high voltage crowbar, 8:25066 (J:US)
Gas density distribution results for NBSTF, 8:25086 (J:US)
Optimal Control
Analysis of optimal control theory applied to plasma position and current control during neutral beam heating in TFTR, 8:25101 (J:US)
Power Supplies
Plasma striking voltage production, 8:25075 (J:US)
Pressure Vessels
Fatigue testing of TFTR vacuum vessel bellows, 8:25160 (J:US)
Program Management
Tokamak Fusion Test Reactor Project, 8:24828 (R:US)
Timing Circuits
CAMAC timing and sequencing module, 8:25196 (J:US)
Vacuum Systems
Engineering and design aspects of the TFTR vacuum vessel bakeout and cooling system, 8:25214 (J:US)
Fabrication of the TFTR vacuum vessel, 8:25199 (J:US)
Valves
Fast shutter valve for TFTR neutral beam lines, 8:25128 (J:US)
Windows
Bakeable optical windows for the tokamak fusion test reactor, 8:25206 (J:US)

THALLIUM
Crystal Field
Temperature dependence of the EFG of ^{192}Tl in thallium metal, 8:23957 (RA:DE:In German)

THALLIUM 192
Nuclear Quadrupole Resonance
Temperature dependence of the EFG of ^{192}Tl in thallium metal, 8:23957 (RA:DE:In German)

THERMAL BARRIERS
Superconducting Magnets
Magnet system for a thermal barrier Tandem Mirror Reactor, 8:24989 (J:US)

THERMAL BATTERIES
Design
Characteristics and development report for the MC3573 thermal battery, 8:23682 (R:US)
Performance
Characteristics and development report for the MC3573 thermal battery, 8:23682 (R:US)

THERMAL CONDUCTIVITY
Measuring Methods
Fuel - cladding gap conductance measurements using Kalman filter methods, 8:23546 (J:US)

THERMAL DECOMPOSITION
See PYROLYSIS

THERMAL ENERGY STORAGE EQUIPMENT
Computerized Simulation
SOLTES1; thermal energy systems simulation (CDC6600,7600; FORTRAN IV (99%) and COMPASS (1%)), 8:23663 (R:US)
Design
Development of a thermal storage system based on the heat of absorption in hygroscopic materials. Final report, 8:23359 (R:US)
Solar Pilot Plant Phase I, detailed design report: thermal storage subsystem research experiment. CDRL Item No. 8 (Approved), 8:23303 (R:US)
Payback Period
Assessment of cool storage in commercial building applications, 8:23664 (R:US)
Performance
Assessment of cool storage in commercial building applications, 8:23664 (R:US)
Performance Testing
Analytical and experimental investigations of sodium heat pipes and thermal energy storage systems. Final report oct 80-sep 81, 8:24083 (R:US)
Solar Pilot Plant Phase I, detailed design report: thermal storage subsystem research experiment. CDRL Item No. 8 (Approved), 8:23303 (R:US)

THERMAL INSULATION
Energy Analysis
Energy analysis of solar energy systems, heat pumps and of improved insulation of single-family houses, 8:23796 (R:DE:In German)
Mathematical Models
Heat transfer in building thermal insulation: the thickness effect, 8:23834 (J:US)

THERMAL POLLUTION (AIR)
See AIR POLLUTION

THERMAL POLLUTION (WATER)
See WATER POLLUTION

THERMAL POWER PLANTS
See also COMBINED-CYCLE POWER PLANTS
FOSSIL-FUEL POWER PLANTS
GEOTHERMAL POWER PLANTS
NUCLEAR POWER PLANTS
OCEAN THERMAL POWER PLANTS
REFUSE-FUELED POWER PLANTS
SOLAR THERMAL POWER PLANTS
Cooling Systems
Effects of copper speciation on aquatic ecosystems, 8:23429 (R:US)
Review of the effects of the Clean Water Act on cooling-system selection by the steam-electric industry, 8:23427 (R:US)
Cooling Towers
BECKDRY; dry cooling for steam-electric plants (CDC6600,7600; FORTRAN IV), 8:23398 (R:US)
Environmental Impacts
Improved method for predicting seasonal and annual shadowing from cooling-tower plumes, 8:24401 (R:US)
Optimization
STOPS; power system short-term optimization (IBM303x,360,370; FORTRAN IV), 8:23402 (R:US)
Pipes
SUPAN; analysis of beam-type piping supports (CDC7600; FORTRAN IV), 8:23400 (R:US)
Pollution Regulations
Review of the effects of the Clean Water Act on cooling-system selection by the steam-electric industry, 8:23427 (R:US)

THERMAL SHIELDS
Design
Thermal design considerations of shields for levitated coils, 8:25024 (J:US)

THERMAL STORAGE
See HEAT STORAGE

THERMIONIC CELLS
See THERMIONIC CONVERTERS

THERMIONIC CONVERTERS
Cogeneration
Thermionic cogeneration burner assessment study. First quarterly technical progress report, October-December, 1982, 8:23858 (R:US)
Mathematical Models
Thermionic cogeneration burner assessment study. First quarterly technical progress report, October-December, 1982, 8:23858 (R:US)
Performance
Thermionic cogeneration burner assessment study. First quarterly technical progress report, October-December, 1982, 8:23858 (R:US)
Uses
Thermionic cogeneration burner assessment study. First quarterly technical progress report, October-December, 1982, 8:23858 (R:US)

THERMIONIC GENERATORS
See THERMIONIC CONVERTERS

THERMOCHEMICAL HEAT STORAGE
Feasibility Studies
Energy storage via the carbothermic reduction of sodium oxide, 8:23667 (R:US)

THERMODYNAMICS
Research Programs
Topics in finite time thermodynamics, 8:24158 (R:US)
THERMOELECTRIC CELLS
See THERMOELECTRIC GENERATORS
THERMOELECTRIC CONVERTERS
See THERMOELECTRIC GENERATORS
THERMOELECTRIC GENERATORS
Radioisotope Heat Sources
Heat-source specification 500 watt(e) RTG, 8:23201 (R:US)
THERMONUCLEAR DEVICES
See also OPEN PLASMA DEVICES
Divertors
Erosion and redeposition analysis for limiter and divertor impurity control systems, 8:24878 (J:NL)
Fabrication
Fabrication of the torus assembly for the OHTE confinement experiment, 8:25213 (J:US)
Limiters
Erosion and redeposition analysis for limiter and divertor impurity control systems, 8:24878 (J:NL)
Protective Coatings
Analysis of the plasma impurity influx from alkali-metal coatings for fusion reactor applications, 8:24877 (J:NL)
THERMONUCLEAR FUELS
Alternate-fuel reactor studies, 8:24817 (R:US)
Recycling
Simple theory for maximum H inventory and release: a new transport parameter, 8:24798 (J:NL)
THERMONUCLEAR POWER PLANTS
Design
Demonstration tokamak-power-plant study (DEMO), 8:24816 (R:US)
Forecasting
Electric power from near-term fusion reactors, 8:24937 (J:US)
Power Generation
Electric power from near-term fusion reactors, 8:24937 (J:US)
THERMONUCLEAR REACTIONS
Reaction Kinetics
STEEP4; thermonuclear reaction rates (CDC6600,7600; FORTRAN IV), 8:24758 (R:US)
THERMONUCLEAR REACTOR COOLING SYSTEMS
Heat Transfer
Heat-transfer characteristics of flowing and stationary particle-bed-type fusion-reactor blankets, 8:24840 (R:US)
THERMONUCLEAR REACTOR MATERIALS
Thermal fatigue of a TiB_2 coated, long pulse, high heat flux component, 8:24910 (J:NL)
Embrittlement
Helium embrittlement of stainless steels at ambient temperature, 8:24911 (J:US)
Gettering
Studies of chromium gettering, 8:24903 (J:NL)
Materials Testing
Role of radiation-damage analysis in the fusion program, 8:24830 (R:US)
Physical Radiation Effects
Effects of irradiation on ceramics for fusion-reactor applications, 8:23992 (R:US)
Reviews
Advanced materials for in-vessel components, 8:24902 (J:NL)
Surface Cleaning
Light impurity removal from stainless steel by atomic hydrogen, 8:24881 (J:NL)
Studies of unipolar arcing in the mini-torus, 8:24884 (J:NL)
Test Facilities
Improved materials testing module for magnetic fusion, 8:25220 (J:US)
Thermal Analysis
Scaling laws for thermal behavior of inertially cooled limiters allowing for temperature-dependent material properties, 8:24895 (J:NL)
THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
Cleaning
Wall conditioning of the JIPP T-II torus by AC discharge cleaning, 8:24883 (J:NL)
Erosion
Initiation of arcing at a plasma-wall contact, 8:24888 (J:NL)
Losses
Rates of loss of material from inertial fusion reactor surfaces exposed to pellet emissions, 8:25155 (J:US)
Recycling
Some factors affecting the dynamics of a plasma-wall interaction simulator, 8:24899 (J:NL)
Sputtering
Physical sputtering code for fusion applications, 8:25172 (J:US)
Wall Loading
Changes in limiter surface temperature profiles for small radius plasmas in Doublet III, 8:24896 (J:NL)
Derivation of the power deposition on limiters and divertor targets from time and space resolved thermographical measurements, 8:24892 (J:NL)
Some factors affecting the dynamics of a plasma-wall interaction simulator, 8:24899 (J:NL)
Thermal processes in tokamaks of the next generation and future reactors, 8:24889 (J:NL)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also I-BEAM TYPE REACTORS
LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
STELLARATOR TYPE REACTORS
TOKAMAK TYPE REACTORS
Breeding Blankets
Initial progress in the first wall, blanket and shield engineering test program for magnetically confined fusion power reactors, 8:24969 (J:US)
Low tritium inventory, phase change blanket concept for magnetic fusion, 8:24973 (J:US)
Cathodes
Testing of water-cooled cathodes on the Westinghouse high surface heat flux test facility, 8:25216 (J:US)
Data Transmission
Method for transmitting analog data over a fiber-optic link, 8:25194 (J:US)
Degassing
Initial thermal outgassing properties of aluminium between 20/degree/c and 320/degree/c, 8:25161 (J:US)
Design
Prototype moving-ring reactor, 8:24933 (J:US)
Electrical Equipment
Reliable trigger unit for rail gap swtiches, 8:25076 (J:US)
Engineering
Initial progress in the first wall, blanket and shield engineering test program for magnetically confined fusion power reactors, 8:24969 (J:US)
First Wall
Initial progress in the first wall, blanket and shield engineering test program for magnetically confined fusion power reactors, 8:24969 (J:US)
Hybrid Systems
Prospects of energy transformation between fusion reactor and OTEC plant, 8:25132 (J:US)
Hydrogen Production
An operating high temperature (1000°C) electrolysis demonstration unit, 8:23213 (J:US)
Joule Heating
OHTE reactor concepts, 8:24931 (J:US)
Limiters
Limiter, of dense and high thermal conducting material, for a fusion reactor, 8:25159 (J:US)
Magnetic Field Configurations
Pf coil current sheets for circular section tori to produce specified internal fields, 8:24993 (J:US)
Maintenance
Challenges of designing fusion reactors for remote maintainability, 8:24950 (J:US)
Measuring Instruments
Hardening of instruments for fusion reactors, 8:24810 (J:US)
Neutral Atom Beam Injection
Future needs for neutral beams in fusion, 8:25107 (J:US)

Nuclear Engineering
EPRI fusion program and its thrust in fusion engineering, 8:25157 (J:US)
Pellet Injection
D/sub 2/ - pellet injection system, 8:25119 (J:US)
Planning
EPRI fusion program and its thrust in fusion engineering, 8:25157 (J:US)
Proceedings
Proceedings - 9th symposium on engineering problems of fusion research, 8:24982 (J:US)
Reactor Operation
Optimization of sequential control in operation of fusion device, 8:25180 (J:US)
Reactor Safety
Engineering challenges of underground contained fusion, 8:24938 (J:US)
Remote Handling
Challenges of designing fusion reactors for remote maintainability, 8:24950 (J:US)
Shielding
Effect of curing condition on the concrete moisture retention and its shielding implication for the design of fusion facilities, 8:24924 (J:US)
Shields
Initial progress in the first wall, blanket and shield engineering test program for magnetically confined fusion power reactors, 8:24969 (J:US)
Technology Assessment
Beginning steps toward fusion technology development, 8:24983 (J:US)
Thermonuclear Fuels
Alternate-fuel reactor studies, 8:24817 (R:US)
Uses
An operating high temperature (1000°C) electrolysis demonstration unit, 8:23213 (J:US)
Vacuum Systems
Sensitivity of commercial ion gage tubes, 8:25221 (J:US)

Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)

THORIUM 234
Chelating Agents
Investigations on the biological behaviour and the decorporation of ^{234}Th in the rat, 8:24370 (R:DE:In German)
Excretion
Investigations on the biological behaviour and the decorporation of ^{234}Th in the rat, 8:24370 (R:DE:In German)
Radiometric Surveys
Recent radiochemistry observations at the Riverton and Maybell tailings piles, 8:23148 (R:US)
Radionuclide Kinetics
Investigations on the biological behaviour and the decorporation of ^{234}Th in the rat, 8:24370 (R:DE:In German)

THORIUM B
See LEAD 212

THORIUM BROMIDES
Absorption Spectra
Optical spectroscopy and electron paramagnetic resonance of Pa^{4+} in $ThBr_4$ and $ThCl_4$ crystals, 8:23889 (J:US)
Crystal Field
Optical spectroscopy and electron paramagnetic resonance of Pa^{4+} in $ThBr_4$ and $ThCl_4$ crystals, 8:23889 (J:US)

THORIUM CHLORIDES
Absorption Spectra
Optical spectroscopy and electron paramagnetic resonance of Pa^{4+} in $ThBr_4$ and $ThCl_4$ crystals, 8:23889 (J:US)
Crystal Field
Optical spectroscopy and electron paramagnetic resonance of Pa^{4+} in $ThBr_4$ and $ThCl_4$ crystals, 8:23889 (J:US)

THREE MILE ISLAND-2 REACTOR
Coolant Cleanup Systems
Interim report on the TMI-2 purification filter examination, 8:23496 (R:US)
Damage
Joint TMI-2 information and examination program: EPRI participation and support, 1982 progress and 1983 program plan, 8:23615 (R:US)
Decontamination
EPICOR-II resin/linear research plan, 8:23608 (R:US)
Joint TMI-2 information and examination program: EPRI participation and support, 1982 progress and 1983 program plan, 8:23615 (R:US)
Filters
Interim report on the TMI-2 purification filter examination, 8:23496 (R:US)
Radioactive Waste Processing
EPICOR-II resin/linear research plan, 8:23608 (R:US)
Submerged demineralize system processing of TMI-2 accident waste water, 8:23616 (R:US)
Radioactivity Transport
Joint TMI-2 information and examination program: EPRI participation and support, 1982 progress and 1983 program plan, 8:23615 (R:US)
Reactor Cores
Quick Look inspection: report on the insertion of a camera into the TMI-2 reactor vessel through a leadscrew opening, 8:23504 (R:US)
TMI-2 core-examination program: INEL facilities readiness study, 8:23607 (R:US)
Remote Viewing Equipment
Quick Look inspection: report on the insertion of a camera into the TMI-2 reactor vessel through a leadscrew opening, 8:23504 (R:US)

THYRISTORS
Feasibility Studies
Development of large-scale thyristor dc circuit breaker, 8:25059 (J:US)
Ion Implantation
Ion implantation in silicon, 8:24208 (RA:DE:In German)

TIDAL POWER
Bibliographies
Solar Energy Update: a current awareness journal, 8:23246 (R:US)

TIGHT SANDS

TIME PROJECTION CHAMBERS
See PROJECTION SPARK CHAMBERS

TIME-SERIES ANALYSIS
Computer Codes
MESA; maximum entropy time series analysis (IBM360,370; FORTRAN IV), 8:25250 (R:US)

TIN
Catalytic Effects
Oil-soluble coal-liquefaction catalyst screening, 8:22936 (R:US)

TIN 112 TARGET
Tin 120 Reactions
Neutron pair transfer between tin isotopes, 8:24674 (RA:DE:In German)

TIN 120 REACTIONS
Transfer Reactions
Neutron pair transfer between tin isotopes, 8:24674 (RA:DE:In German)
TIN 120 TARGET
Pion Minus Reactions
Los Alamos: nuclear monopole, 8:24680 (J:XC)
TIN 124 TARGET
Argon 40 Reactions
Measurement of neutron multiplicity distributions with scintillator tank, 8:24198 (RA:DE:In German)
TIN BASE ALLOYS
Corrosion
Sea water corrosion of two-phase Cu-10Ni-8Sn, 8:23897 (RA:US)
Fermi Level
Fermi-surface properties of $CeSn_3$ and related compounds ($LaSn_3$), 8:23947 (R:US)
TITANIUM
Biological Fouling
OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico - 1. - fouling resistance, 8:23310 (J:US)
Corrosion
OTEC biofouling, corrosion, and materials study from a moored platform at Punta Tuna, Puerto Rico - 1. - fouling resistance, 8:23310 (J:US)
Electron Collisions
Calculated photon spectra at several angles for 5- and 50-MeV electron beams striking solid and gas targets, 8:24546 (R:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Sputtering
Behavior of hot titanium getters at the plasma edge in tokamaks, 8:24905 (J:NL)
TITANIUM 50 TARGET
Alpha Reactions
Error propagation in fitting optical potentials to elastic heavy-ion scattering, 8:24655 (RA:DE:In German)
Error propagation in the phase analysis of elastic scattering data, 8:24656 (RA:DE:In German)
TITANIUM ALLOYS
See also TITANIUM BASE ALLOYS
Corrosion
Corrosion of materials in a clay environment, 8:23145 (RA:DE)
TITANIUM BASE ALLOYS
Physical Radiation Effects
Segregation in irradiated titanium alloys (Ion irradiation (2.1 MeV Ar^+) of Ti-6Al-4V, Ti-8Al-1V-Mo, Ti-3V and Ti-8.7 Al), 8:23931 (R:US)
TITANIUM BORIDES
Compacting
First quarterly report of the DARPA dynamic synthesis and consolidation program, 8:24008 (R:US)
Fatigue
Thermal fatigue of a TiB_2 coated, long pulse, high heat flux component, 8:24910 (J:NL)
TITANIUM CARBIDES
Coatings
Outgassing characteristics of TiC coated materials, 8:24909 (J:NL)
Compacting
First quarterly report of the DARPA dynamic synthesis and consolidation program, 8:24008 (R:US)
Degassing
Outgassing characteristics of TiC coated materials, 8:24909 (J:NL)
Surface Coating
All TiC coated limiter experiment in the JIPP T-II tokamak, 8:24860 (J:NL)
Vapor Deposited Coatings
Thermal and mechanical testings of TiC and TiN coating materials with Mo substrates, 8:25162 (J:US)
TITANIUM NITRIDES
Vapor Deposited Coatings
Thermal and mechanical testings of TiC and TiN coating materials with Mo substrates, 8:25162 (J:US)
TITANIUM OXIDES
Sorptive Properties
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_3O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)
TMPN
See ORGANIC OXYGEN COMPOUNDS
PIPERIDINES
TMR REACTORS
Design
Fission-suppressed hybrid reactor: the fusion breeder, 8:24838 (R:US)
Direct Energy Converters
Direct energy converter for UW tandem mirror reactor, 8:25134 (J:US)
Superconducting Magnets
Magnet system for a thermal barrier Tandem Mirror Reactor, 8:24989 (J:US)
TMTSF
Coupling Constants
Theory of anion ordering in TMTSF compounds, 8:24027 (R:US)
Superconductivity
Some basic questions in organic superconductivity, 8:24028 (R:US)
TMX DEVICES
Design
Overview of the Tandem Mirror Experiment-Upgrade, 8:24941 (J:US)
ECR Heating
Beam waveguide launcher for high power ecrh heating in large tandem mirror machines, 8:25098 (J:US)
Magnet Coils
TMX upgrade magnet system mechanical issues, 8:24845 (R:US)
Plasma Instability
Criterion for Baldwin instability in a symmetric tandem mirror with hot-electron end plugs, 8:24774 (R:US)
Power Supplies
Application of power factor correction in the Tandem Mirror Experiment upgrade magnet power supply, 8:25069 (J:US)
Superconducting Magnets
TMX-axisymmetric magnet set design study, 8:24985 (J:US)
Test Facilities
Plasma engineering considerations for an inside-barrier tandem mirror test facility, 8:25165 (J:US)
Timing Circuits
Diagnostic timing system for the TMX-Upgrade, 8:25170 (J:US)
TOBACCO PRODUCTS
Combustion Products
Tobacco smoke in occupied spaces: ventilation requirements. Paper 81.22.4, 8:23831 (J:US)
TOBACCO SMOKES
Biological Effects
Smoking, infant birthweight and lead burden in developing children, 8:24459 (J:US)
TOKAMAK DEVICES
See also ALCATOR DEVICE

TEXTOR TOKAMAK
TFR TOKAMAK
Alfven Waves
R.f. system for Alfven wave heating of the TCA tokamak, 8:24926 (J:US)
Cleaning
ECR discharge cleaning experiment in the JIPP T-II, 8:24880 (J:NL)
Control Systems
Experimental study on feedback control system of plasma position, 8:25181 (J:US)
Impurity control in the Varennes tokamak, 8:24862 (J:NL)

Current-Drive Heating
Operating tokamaks with steady-state toroidal current, 8:24765 (R:US)
Ray-tracing study of electron-cyclotron heating in toroidal geometry, 8:24767 (R:US)
Some novel features of the ordinary-mode electron-cyclotron resonance heating of tokamak plasmas, 8:24771 (R:US)
Design
Generation of multipole nulls in a tokamak geometry, 8:24995 (J:US)
Divertors
Monte Carlo simulation of the neutral gas density and temperature distribution due to the recycling processes at a poloidal, toroidal or mushroom limiter and at the divertor plate of a poloidal divertor, 8:24874 (J:NL)
ECR Heating
Ray-tracing study of electron-cyclotron heating in toroidal geometry, 8:24767 (R:US)
Some novel features of the ordinary-mode electron-cyclotron resonance heating of tokamak plasmas, 8:24771 (R:US)
Eddy Currents
Eddy current load estimation for toroidal shells as a result of plasma disruptions, 8:24990 (J:US)
Electrical Transients
Calculation of transient current response of a set of coupled circuits using an eigenvalue technique, 8:24992 (J:US)
Feedback
Feedback stabilization of tokamaks against slow axisymmetric MHD instabilities, 8:24914 (J:GB)
Getters
Behavior of hot titanium getters at the plasma edge in tokamaks, 8:24905 (J:NL)
Impurities
ECR discharge cleaning experiment in the JIPP T-II, 8:24880 (J:NL)
Impurity control in the Varennes tokamak, 8:24862 (J:NL)
Impurity detection in the APEX tokamak by in-situ doppler shift laser fluorescence spectroscopy, 8:24812 (J:US)
Structure of metallic coatings for impurity control in MACROTOR, 8:24882 (J:NL)
Studies of unipolar arcing in the mini-torus, 8:24884 (J:NL)
Limiters
All TiC coated limiter experiment in the JIPP T-II tokamak, 8:24860 (J:NL)
Damage and modifications in the Frascati tokamak limiter, 8:24897 (J:NL)
Dependence of hydrogen recycling on molecular effects in tokamaks, 8:24872 (J:NL)
Design and mechanical analysis of TORE SUPRA vacuum vessels and limiters, 8:25207 (J:US)
Experimental studies on pump limiters, 8:24850 (J:NL)
Infrared thermography of a pump limiter on MACROTOR, 8:24854 (J:NL)
Large area pumped limiter experiments in MACROTOR, 8:24852 (J:NL)
Physics of particle exhaust in pump limiters, 8:24853 (J:NL)
Recycling of metal impurities in the limiter shadow region of a tokamak, 8:24875 (J:NL)
Magnet Coils
Normal conducting steady-state toroidal magnet systems for large tokamaks, 8:24997 (J:US)
Magnetic Field Configurations
Tokamak-stellarator hybrid configurations with unlinked helical coils, 8:24832 (R:JP)
Magnetic Islands
Formation of magnetic islands and ergodic magnetic layers in wall-lapping plasma as a non-divertor concept for a reactor-relevant tokamak, 8:24851 (J:NL)
Modular Structures
Modular first wall concept for steady state operation, 8:24965 (J:US)
Neutral Beam Sources
Highlights of the Zephyr neutral beam injection system conceptual design, 8:25084 (J:US)
Plasma Density
Calculation of hydrogen density in toroidal plasma, 8:24793 (J:NL)
Poloidal Divertors
Computational study of operating regimes for poloidal divertors, 8:24855 (J:NL)
Models for poloidal divertors, 8:24868 (J:NL)
Power Supplies
Development of large-scale thyristor dc circuit breaker, 8:25059 (J:US)
Power supplies for the Varennes tokamak a quasi-continuous operation experiment, 8:25065 (J:US)
Sensitivity Analysis
Sensitivity study code for tokamak devices, 8:24935 (J:US)
Stability
Feedback stabilization of tokamaks against slow axisymmetric MHD instabilities, 8:24914 (J:GB)
Superconducting Magnets
Advances in the cluster test facility and the test module coil development, 8:25056 (J:US)
Evaluation of the use of a normal shield to reduce transient field induced losses in tokamak superconducting coils, 8:24988 (J:US)
Large-current conductor development for superconducting poloidal coils, 8:25057 (J:US)
Tearing Instability
Effects of toroidicity on resistive tearing modes, 8:24768 (R:US)
Thermonuclear Reactor Materials
Scaling laws for thermal behavior of inertially cooled limiters allowing for temperature-dependent material properties, 8:24895 (J:NL)
Wall material characteristics in reacting plasma modelling, 8:24876 (J:NL)
Thermonuclear Reactor Walls
Experimental observation of a non-constant recombination coefficient - H/Pd(110); possible implications for hydrogen recycle in tokamaks, 8:24900 (J:NL)
Vacuum Systems
Design, fabrication and testing of a model heating and cooling system for a vacuum vessel, 8:24927 (J:US)
Design and mechanical analysis of TORE SUPRA vacuum vessels and limiters, 8:25207 (J:US)

Uranium hydrogeochemical and stream sediment reconnaissance of the Bradfield Canal NTS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23098 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Limon NTMS quadrangle, Colorado. National Uranium Resource Evaluation, 8:23100 (R:US)
Uranium hydrogeochemical and stream sediment reconnaissance of the Nabesne NTMS quadrangle, Alaska. National Uranium Resource Evaluation, 8:23099 (R:US)
URANIUM DIOXIDE
Chemical Preparation
Production of spherical UO/sub 2/-UC/sub 2/ for nuclear fuel applications using thermochemical principles, 8:23108 (J:US)
Freezing
Preliminary results of the first four TRAN fuel freezing experiments, 8:23649 (J:US)
Fuel-Cladding Interactions
Relative freezing controlled penetration potential of carbide and oxide fuel, 8:23648 (J:US)
Melting
Preliminary results of the first four TRAN fuel freezing experiments, 8:23649 (J:US)
Sintering
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R:US)
Thermal Conductivity
Development and demonstration of an advanced extended-burnup fuel-assembly design incorporating urania-gadolinia. Second semi-annual progress report, October 1981-March 1982, 8:23473 (R:US)
Vapor Pressure
In-pile measurement of the total vapor pressure over high-purity UO_2, 8:23547 (J:US)
URANIUM HEXAFLUORIDE
Gamma Spectroscopy
Gamma-ray spectrometric determination of UF_6 assay with 1 percent precision for international safeguards. Part 1: product and feed in 1S and 2S sample cylinders, 8:23191 (R:US)
URANIUM II
See URANIUM 234
URANIUM ISOTOPES
See also URANIUM 226

WEATHERIZATION
Curriculum Guides
Do-it-yourself home energy-saving techniques. 1981-82 annual technical progress report, September 25, 1981-June 30, 1982, 8:23815 (R:US)
Education
Do-it-yourself home energy-saving techniques. 1981-82 annual technical progress report, September 25, 1981-June 30, 1982, 8:23815 (R:US)
Program Management
Weatherization program in West Virginia, 8:23812 (R:US)
WEB GROWTH METHOD
See DENDRITIC WEB GROWTH METHOD
WECS
See WIND TURBINES
WEINBERG-SALAM GAUGE MODEL
Perspectives on weak interactions, 8:24579 (RA:US)
WELDED JOINTS
Corrosion Fatigue
Assessment of corrosion fatigue behavior of offshore structures, 8:23904 (RA:US)
Fatigue of welded structural steel in sea water, 8:23905 (RA:US)
Failures
Analysis of a heat-transfer fluid fill pipe failure, 8:23914 (RA:US)
Stress Corrosion
Analysis of a heat-transfer fluid fill pipe failure, 8:23914 (RA:US)
WELDING
See also DIFFUSION WELDING
ELECTRON BEAM WELDING
Research Programs
Report of the fourth BES Welding Research Program meeting, 8:23890 (J:US)
WELDS
See WELDED JOINTS
WELL LOGGING EQUIPMENT
To be used only when the equipment itself is the topic of the paper; includes source, detector, and associated equipment.
Design
Sandia technology, 8:23882 (R:US)
Performance
Sandia technology, 8:23882 (R:US)
WELL STIMULATION
Technology Assessment
Evaluation of stimulation technologies in the Eastern Gas Shales Project (Shaped charge penetration; dendritic fracturing; tailored-pulse loading; emplaced high explosive), 8:23073 (R:US)
WENDELSTEIN-7 STELLARATOR
Neutral Beam Sources
Experience with the Wendelstein VII-neutral injectors, 8:25083 (J:US)
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VIRGINIA
Black Shales
Comparative geochemistry of Devonian shale cores from the Appalachian Basin, Mason, Monongalia, and Upshur Counties, West Virginia; Illinois Basin, Tazwell County, Illinois; Clark County, Indiana; and Michigan Basin, Sanilac County, Michigan, 8:23061 (R:US)
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
Low Income Groups
Weatherization program in West Virginia, 8:23812 (R:US)
Natural Gas Deposits
Comparative geochemistry of Devonian shale cores from the Appalachian Basin, Mason, Monongalia, and Upshur Counties, West Virginia; Illinois Basin, Tazwell County, Illinois; Clark County, Indiana; and Michigan Basin, Sanilac County, Michigan, 8:23061 (R:US)
Organic-matter content of Appalachian Devonian shales determined by use of wire-line logs: summary of work done 1976-1980, 8:23062 (R:US)
Reservoir-engineering aspects and resource-assessment methodology of Eastern Devonian gas shales, 8:23052 (R:US)
WET DEPOSITION
See WASHOUT
WETLANDS
Meetings
Proceedings of the conference on coastal erosion and wetland modification in Louisiana: causes, consequences, and options, 8:24267 (R:US)
WET-TYPE COOLING TOWERS
See COOLING TOWERS
WHALES
See CETACEANS
WHEAT
Nutrition
Increasing total and biologically active chromium in wheat grain and spinach by spraying with chromium salts, 8:24467 (J:US)
Productivity
Ozone impacts on the productivity of selected crops (Corn, wheat, soybean and peanut crops), 8:24403 (R:US)
WHOLESALE BUYERS
See RESELLERS
WHOLESALE SELLERS
See RESELLERS
WHOLESALERS
See RESELLERS
WIND
Climates
Environmental data for sites in the National Solar Data Network, 8:23249 (R:US)
Data Compilation
Environmental data for sites in the National Solar Data Network, 8:23251 (R:US)
Environmental data for sites in the National Solar Data Network, 8:23248 (R:US)
Environmental data for sites in the National Solar Data Network, 8:23250 (R:US)
Experimental Data
Wind data for building ventilation in selected US cities, 8:23828 (R:US)
Forecasting
Learning to forecast wind at remote sites for wind-energy applications. Final report, 8:23394 (R:US)
Monitoring
Wind-resource monitoring at Southtowns Sewage Treatment Plant, Woodlawn, NY, 8:23389 (R:US)
Remote Sensing
Remote sensing for wind power potential: a prospector's handbook, 8:23388 (R:US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See ELECTRIC GENERATORS
WIND TURBINES

WIND POWER
Appropriate technologies for basic energy needs in rural India. Working paper, 8:23759 (R:US)
Availability
Remote sensing for wind power potential: a prospector's handbook, 8:23388 (R:US)
Wind-resource monitoring at Southtowns Sewage Treatment Plant, Woodlawn, NY, 8:23389 (R:US)
Bibliographies
Solar Energy Update: a current awareness journal, 8:23246 (R:US)
Feasibility Studies
Renewable energy system feasibility study. Final report 2 Sep 80-30 Apr 82, 8:23252 (R:US)
Uses
Foreign applications and export potential for wind-energy systems, 8:23761 (R:US)
WIND POWER PLANTS
Commercialization
Commercialization analysis of large wind energy conversion systems. Final report, 8:23390 (R:US)
WIND TURBINES
Economic Analysis
Assessment of distributed wind-power systems, 8:23392 (R:US)
Assessment of distributed wind-power systems. Final report, 8:23391 (R:US)
Electric Batteries
Wind-energy battery-storage project. Phase I. Final report, 8:23396 (R:US)
Exports
Foreign applications and export potential for wind-energy systems, 8:23761 (R:US)
Power Generation
Assessment of load-frequency-control impacts caused by small wind turbines, 8:23393 (R:US)
WINDOWS
Airtightness
Connection between air permeability of joints of windows and exchange of air in the room, 8:23801 (R:DE:In German)
Heat Gain
Window and its heat balance considering solar radiation and additional insulation measures, 8:23799 (R:DE:In German)
Heat Losses
Window and its heat balance considering solar radiation and additional insulation measures, 8:23799 (R:DE:In German)
Insolation
Window and its heat balance considering solar radiation and additional insulation measures, 8:23799 (R:DE:In German)
Materials Testing
Bakeable optical windows for the tokamak fusion test reactor, 8:25206 (J:US)
Thermal Insulation
Window and its heat balance considering solar radiation and additional insulation measures, 8:23799 (R:DE:In German)
WOLFRAM
See TUNGSTEN
WOOD
Chemical Feedstocks
Chemical feedstocks from wood: aqueous organic alcohol treatment, 8:23263 (R:US)
Combustion
Cord wood gasification and gas combustion system, 8:23227 (J:US)
Delignification
Chemical feedstocks from wood: aqueous organic alcohol treatment, 8:23263 (R:US)
Gasification
Cord wood gasification and gas combustion system, 8:23227 (J:US)
Development of an energy converter for the production of heat, mechanical and electrical energy through the gasificaton of wood and straw in a batch gasifier with an output of 50-150 kw. extended to include the gasification of batched biomass with an output of 150-400 kw. Final report, 8:23226 (R:US)
Thermochemical conversion of biomass to synthetic fuels in a large experimental facility. Gasification Research on Wood (GROW) Project, April 1981-March 1982, 8:23270 (R:US)
Yields
User's Manual for the TVA Lumber Yield and Value File Utility Program. Version 1.0, 8:24356 (R:US)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
Design
Cord wood gasification and gas combustion system, 8:23227 (J:US)
WOOD FUELS
Use of this term is limited to polcy, feasibility, and socio-economic studies. For wood properties use WOOD.
Appropriate technologies for basic energy needs in rural India. Working paper, 8:23759 (R:US)
Combustion
Converting small industrial boilers to burn wood fuels. Forest Service research paper (final), 8:24153 (R:US)
WOOD WASTES
Availability
Potential of organic residues for the production of basic chemical compounds. Pt. 3, 8:23851 (R:DE:In German)
Calorific Value
Studie kring maetning av traedrester vid Nydo Energi i hissmofors (a study of measuring wood residues at nydo energy ltd.), 8:23278 (R:US)
Gasification
Energy recovery by gasification of agricultural and forestry wastes in a co-current moving bed reactor. Final report, 8:23274 (R:US)
Residues
Potential of organic residues for the production of basic chemical compounds. Pt. 2, 8:23850 (R:DE:In German)
Resource Assessment
Potential of organic residues for the production of basic chemical compounds. Pt. 1, 8:23849 (R:DE:In German)
Waste Product Utilization
Potential of organic residues for the production of basic chemical compounds. Pt. 1, 8:23849 (R:DE:In German)
Potential of organic residues for the production of basic chemical compounds, 8:23852 (R:DE:In German)
Potential of organic residues for the production of basic chemical compounds. Pt. 2, 8:23850 (R:DE:In German)
Potential of organic residues for the production of basic chemical compounds. Pt. 3, 8:23851 (R:DE:In German)
WORKERS

WORKING (MATERIALS)
See MATERIALS WORKING
WYOMING
Oil Fields
Naval Petroleum and Oil Shale Reserves. Annual report of operations, 8:23018 (R:US)
Oil Shale Deposits
Naval Petroleum and Oil Shale Reserves. Annual report of operations, 8:23018 (R:US)

X

X CHROMOSOME
Prior to April 1980 this concept was indexed to HETEROCHROMOSOMES.
Chromosomal Aberrations
Characterization of x-autosome translocations, and their use as tools to investigate gene inactivation, 8:24335 (RA:US)
Investigation of the causes of genetic male sterility, 8:24336 (RA:US)
Genetic Mapping
Characterization of x-autosome translocations, and their use as tools to investigate gene inactivation, 8:24335 (RA:US)

X-CHROMOSOMES
See X CHROMOSOME
XENON
Inventories
Byproduct inventories, 8:23171 (R:US)
Ion-Atom Collisions
Impact-parameter dependence of M-shell excitation in slow Xe + Xe collisions, 8:24535 (RA:DE:In German)
Isotope Ratio
Potential for large-scale uses for fission-product Xenon, 8:23105 (R:US)
Photoionization
Resonance ionization spectroscopy schemes for Ar, Kr and Xe, 8:24559 (J:NL)
Recovery
Technology for recovery of byproducts, 8:23173 (R:US)
Uses
Potential for large-scale uses for fission-product Xenon, 8:23105 (R:US)
XENON 123
E2-Transitions
Lifetime measurements and quadrupole moments in sup(123,125)Xe, 8:24676 (RA:DE:In German)
XENON 125
E2-Transitions
Lifetime measurements and quadrupole moments in sup(123,125)Xe, 8:24676 (RA:DE:In German)
XENON 132 REACTIONS
Deep Inelastic Heavy Ion Reactions
No need for a new damping mechanism in the system ^{132}Xe + ^{56}Fe at energies below 7.12 MeV/ν, 8:24673 (RA:DE:In German, English)
XENON IONS
Ion-Atom Collisions
Impact-parameter dependence of M-shell excitation in slow Xe + Xe collisions, 8:24535 (RA:DE:In German)
X-RASERS
See X-RAY LASERS
X-RAY DIFFRACTION
Automation
Further development of automatic measuring equipment for X-ray mineral analysis with computer, 8:24496 (R:DE:In German)
X-RAY EMISSION ANALYSIS
See also X-RAY FLUORESCENCE ANALYSIS
Argon 40 Beams
Detection of trace elements with heavy ions, 8:24048 (RA:DE:In German)
Corrections
Influence of detector geometry on AEM-based x-ray microanalysis. I. Theoretical, 8:24046 (R:US)
Geometry
Influence of detector geometry on AEM-based x-ray microanalysis. I. Theoretical, 8:24046 (R:US)
X-RAY EQUIPMENT
See also X-RAY SOURCES
Design
Facility for radiographic diagnosis, 8:24346 (P:DE:In German)
X-RAY FLUORESCENCE ANALYSIS
Performance Testing
X-ray fluorescence/X-ray energy analysis as a trace element tool, 8:24324 (J:US)
X-RAY LASERS
Energy and technology review, 8:24842 (R:US)
Laser-heated flashlamps: a step toward a soft x-ray laser, 8:24132 (RA:US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Feasibility Studies
Electron-channeling radiation: x-ray source feasibility study, 8:24729 (R:US)
Kilo Amp Beam Currents
Recent performance improvements on FXR, 8:24189 (R:US)
Linear Accelerators
Multistage pulsed-power electron accelerators, 8:24185 (R:US)
Recent performance improvements on FXR, 8:24189 (R:US)
X-RAY SPECTROMETERS
Energy and technology review, 8:24842 (R:US)
Design
Laser fusion x-ray measurements, 8:24843 (RA:US)

Y

YANG-MILLS THEORY
Lorentz Invariance
Lorentz-non-invariant counter-terms in QCD in a general axial gauge, 8:24636 (J:NL)
YEASTS
Cultivation Techniques
Organisms and compounds of unnatural isotopic composition in NMR, 8:24348 (R:US)
Messenger-RNA
mRNA processing in yeast, 8:24312 (RA:US)
YIELD (BIOLOGICAL)
See PRODUCTIVITY
YTTRIUM
Atom Transport
Studies of the diffusion of hydrogen in yttrium, 8:23990 (TJ:US)
Sorptive Properties
Diffusion of hydrogen in yttrium, 8:23553 (TJ:US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM BORIDES
Magnetic Specific Heat
Magnetic correlations in $ErRh_4B_4$, 8:24015 (BA:US)
Spin-Lattice Relaxation
^{11}B study of spin dynamics in Y/sub 1-x/RE/sub x/Rh_4B_4 (RE = Gd, Er), 8:23999 (R:US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
ZEA MAYS
See MAIZE
ZEOLITES
See also MORDENITE
Absorption
Optimization of adsorbate-absorbent couples. Final report, 8:23321 (R:XE:FR)
Adsorption
Optimization of adsorbate-absorbent couples. Final report, 8:23321 (R:XE:FR)
Sorptive Properties
Iodine-fixation studies at the Pacific Northwest Laboratory, 8:23165 (R:US)
Structural Chemical Analysis
Transmission and backscatter Moessbauer spectroscopy of zeolite Fe (and Fe-Co) synfuel catalysts, 8:24057 (R:US)
ZERO POWER REACTORS
See also ZPR-9 REACTOR
Data Compilation
Nuclear reactors built, being built, or planned in the Unites States as of June 30, 1981, 8:23443 (R:US)
ZINC
Biological Effects
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Crystallography
Measure of the electron drag and the phonon drag in zinc crystals, 8:23985 (J:US)
Ecological Concentration
Accumulation of cadmium and zinc in soil and vegetation from long-term application of wastewater, 8:24475 (J:US)

Environmental pollution control at the AMAX-Homestake lead smelter, 8:24245 (J:US)
Heavy metals in the environs of a smelter, 8:24292 (J:US)
Metabolism
Effect of phosphorus and calcium on zinc metabolism in man, 8:24461 (J:US)
Effect of starvation on ^{65}Zn tissue distribution and excretion by rats, 8:24464 (J:US)
Relationship between gastric cancer and blood trace metal levels, 8:24460 (J:US)
Zinc and magnesium concentrations in plasma and red blood cells in patients on digitalis medication, 8:24462 (J:US)
Production
Energy requirements for materials used in vehicles characterized for the TAPCUT project, 8:23842 (R:US)
Toxicity
Enzyme and gene regulation in Drosophila, 8:24412 (RA:US)
Molecular mechanisms of toxicity, mutagenesis and carcinogenesis by metal pollutants, 8:24414 (RA:US)
Uptake
Release of zinc from disposable coils during hemodialysis, 8:24345 (J:US)

ZINC 65
Tracer Techniques
Effect of starvation on ^{65}Zn tissue distribution and excretion by rats, 8:24464 (J:US)

ZINC ALLOYS
See also BRASS
Fractures
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)
Intergranular Corrosion
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)
Stress Corrosion
Intergranular stress corrosion cracking of aluminum alloys by hydrogen or by liquid metal embrittlement, 8:23909 (RA:US)

ZINC OXIDES
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Electrochemistry
Microwave absorption studies of interface phenomena at ZnO electrodes, 8:24074 (J:US)
Photochemistry
Microwave absorption studies of interface phenomena at ZnO electrodes, 8:24074 (J:US)
Sorptive Properties
Studies involving high-temperature desulfurization/regeneration reactions of metal oxides for fuel-cell program, 8:23782 (R:US)

ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
ZIRCALOY 4
Stress Corrosion
Pellet-clad interaction failures: stress corrosion cracking by iodine or metal vapour embrittlement by cesium/cadmium vapours, 8:23920 (RA:US)
Thermodynamic assessment of in-reactor iodine SCC of zircaloy, 8:23982 (J:NL)

ZIRCALOY 2
Chemical Composition
Oxidation-induced dimensional changes in zircaloy cladding tubes, 8:23921 (RA:US)
Oxidation
Oxidation-induced dimensional changes in zircaloy cladding tubes, 8:23921 (RA:US)

ZIRCALOY 4
Chemical Composition
Oxidation-induced dimensional changes in zircaloy cladding tubes, 8:23921 (RA:US)
Deformation
Boundary effects on Zircaloy-4 cladding deformation in LOCA simulation tests, 8:23651 (J:US)
Oxidation
Oxidation-induced dimensional changes in zircaloy cladding tubes, 8:23921 (RA:US)
Physical Radiation Effects
EPRI/B and W cooperative program on PWR fuel-rod performance. Final report, 8:23498 (R:US)

ZIRCONIUM 82
Gamma Cascades
Gamma ray spectroscopy in ^{78}Sr and ^{82}Zr, 8:24669 (RA:DE:In German)

ZIRCONIUM 90 TARGET
Krypton 86 Reactions
Role of deformation and shell effects in deep inelastic collisions of ^{86}Kr + ^{88}Sr,^{90}Zr,^{92}Mo at energies close to the Coulomb barrier, 8:24667 (RA:DE:In German, English)

ZIRCONIUM ALLOYS
Hydridation
Hydrogen absorption and temperature programmed desorption (TPD) studies of iron- and chromium-substituted ZrV_2, 8:23214 (R:US)
Physical Radiation Effects
Radiation damage in amorphous CuZr-alloys, 8:23965 (RA:DE:In German)

ZIRCONIUM HYDRIDES
Interstitials
Interstitial site occupation in ZrNiH, 8:23997 (R:US)

ZIRCONIUM OXIDES
Catalytic Effects
Development of new catalysts for coal liquids refining. Seventh quarterly report, 1 July 1980 - 30 September 1980, 8:22921 (R:US)
Density
Densification of monoclinic ZrO_2 with vanadate additives. Final report 1 Mar 79-1 Mar 82, 8:23991 (R:US)
Grain Boundaries
Densification of monoclinic ZrO_2 with vanadate additives. Final report 1 Mar 79-1 Mar 82, 8:23991 (R:US)
Sintering
Densification of monoclinic ZrO_2 with vanadate additives. Final report 1 Mar 79-1 Mar 82, 8:23991 (R:US)
Sorptive Properties
Hydrides of oxygen-stabilized intermetallic phases (Zr_3V_3O; Ti_4M_3O/sub x/ (M = Fe, Co, Ni)), 8:23998 (R:US)

ZOOPLANKTON
Metabolism
Origins of dissolved organic matter in Southern California coastal waters: experiments on the role of zooplankton, 8:24272 (J:DE)

ZPR-9 REACTOR
Uncooled.
Reactivity Worths
Flux distortion effects in the diagnostic cores phase 1 assembly, 8:23578 (J:US)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	Abstract No.	Report No.
AA07-76RL02426	Montana Bureau of Mines and Geology, Butte	
	8:23363	Montana Geological Society, Annual Field Conference, Guidebook 357-363 (1981).
AC01-76CS32388	International Business Machines Corp., Huntsville, AL (USA)	
	8:23341	SOLAR/2011—79/14

REPORT NUMBER INDEX

The numbers assigned to all reports cited in the publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and TIC, an order number in the form, DE82000001, appears in column 3. Requesters are urged to use this order number where provided. In column 4, one or more DOE distribution categories are indicated, e.g. , STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from TIC. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 1 to 5% illegibility, available PC and MF; 2 = 6 to 10% illegibility, available MF only; 3 = 11% or more illegibility, available PC only.

Abbreviations Used in Availability Column

EM Available in aperture card format only. Inquiries regarding the availability of these items should be addressed to USDOE-TIC, P.O. Box 62, Oak Ridge, Tennessee, 37830.

ETEC Available *only to requesters within the United States* from the Energy Technology Engineering Center, P.O. Box 1449, Canoga Park, California 91304.

GJO Available from DOE Grand Junction Office, P.O. Box 2567, Grand Junction, Colorado 81501.

GPO For sale by the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

HMSO Her Majesty's Stationery Office, Atlantic House, Holborn Viaduct, London, England, EC1P 1BN.

NSO Available *only to requesters within the United States* from the Nuclear Standards Office, Oak Ridge National Laboratory, P.O. Box X, Oak Ridge, Tennessee 37830.

NTIS For sale by the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, Virginia 22161. Price given is the domestic price for paper copy; prices for foreign purchasers are in most instances twice the domestic price.

TIC Available from the Technical Information Center, P.O. Box 62, Oak Ridge, Tennessee 37830.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE					
A01	$4.50	E01	$6.50	T01	$125.00
PAPER COPY		E02	7.50	T02	140.00

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R:SU:In Russian). The language designator does not appear if the document is published in English.

DOCUMENT TYPES

J	Journal article
TJ	Translation of a journal article
R	Report
RA	Report analytic

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

Most reports abstracted in this publication may be obtained from

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, VA 22161

or

DOE Technical Information Center (TIC)
P. O. Box 62
Oak Ridge, TN 37830
ATTN: Customer Services Division

Note: DOE offices and contractors should order from TIC; all others should order from NTIS. For more specific information on ordering, please note the introductory paragraph to the Report Number Index. For assistance in obtaining reports that do not have an Order No. (DE...) or other availability indicated in the citation or Report Number Index, contact TIC.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications, e.g., A 293,415, are available from NTIS.

NON-REPORT DOCUMENTS

Check the citation closely for the availability of such documents as journal articles, conference papers, books, and monographs. It may be necessary to request directly from the publisher or originator or to contact local, state, or university libraries or commercial reprint services.

Dissertations are available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI. Please request by Order No., e.g., DA82-11997.

OTHER

When GPO is cited as available source, order from Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.

REPORT COLLECTIONS

The libraries listed below purchase and maintain microfiche collections of DOE and foreign reports. Most of these libraries have microfiche reader-printers or other photocopy facilities with which to reproduce enlarged copies from microfiche. Charges for reproduction services vary.
